TODAY

2:00-3:40pm GRID Presentations

3:45-4:00pm Augmented reality demo

4:00-4:15pm Break

4:15-5:00pm Workshopping

4:15-4:30pm Who you are, what organisation are you from, how might 3D integrated BIM/GIS assist you in your role?

4:30-4:45pm

1. How often do you update your data (daily, monthly, yearly)?
2. If you have 3D data, what is it used for?
3. If you have sensor data and what they use them for?
4. What kind of problems need 3D data and 3D solutions?

4:45-5:00pm Presentation of results and discussion

5:00-6:00pm Mingling with canapés and drinks

Content

- Data management
- Query and visualisation

Sisi Zlatanova

The project

Investigate approaches for 3D Precinct Information Modelling (PIM)

Integration of:

- BIM and 3D GIS
- sensor data

Requirements:

- Compliant with international standards
- Object-oriented and semantically-rich data structure
- Open source solutions

Focus on:

Workflow for 3D reconstruction

3D spatial structuring

System architecture

Precinct IM: a new digital platform for integrated design, assessment and management of the built environment, 2017, Newton, plume, Marchant, Mitchell and Ngo

BIM (e.g., IFC)
Constructive Solid Geometry

Volumetric, parametric primitives representing the structural components of buildings

3D GIS (e.g., CityGML)
Boundary Representation

Accumulation of observable surfaces of topographic features

Existing systems and data at EM UNSW

Very complex:

- **7 Departments of Estate Management UNSW:**

Asset Management, Development, Facilities Management, Strategy and Business Systems, Security and Traffic, Environmental Sustainability and Property Management.

- **5 Software packages:**

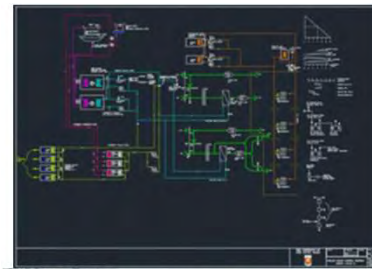

Archibus, ArcGIS, AutoCAD, Revit, Greensense

- **Many data formats in 2D and 3D**

DXF/DWG, Shape, IFC

- **Various geometries**

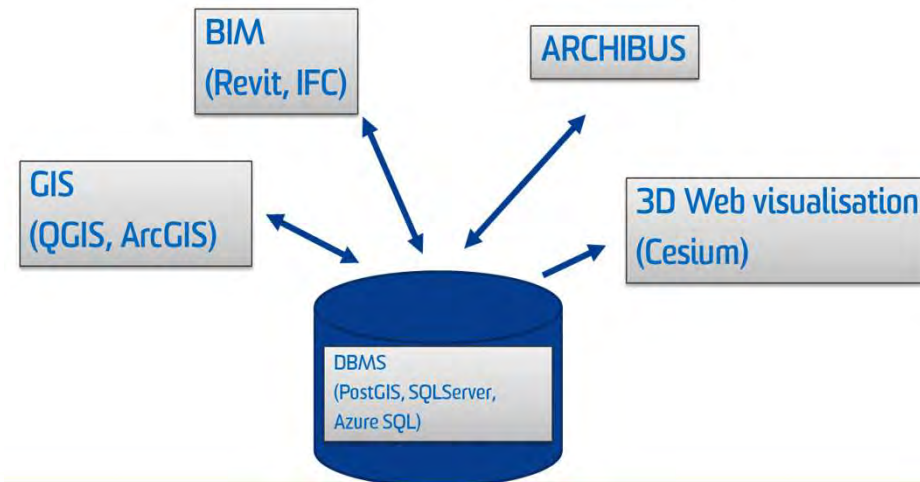

- **Little semantics**

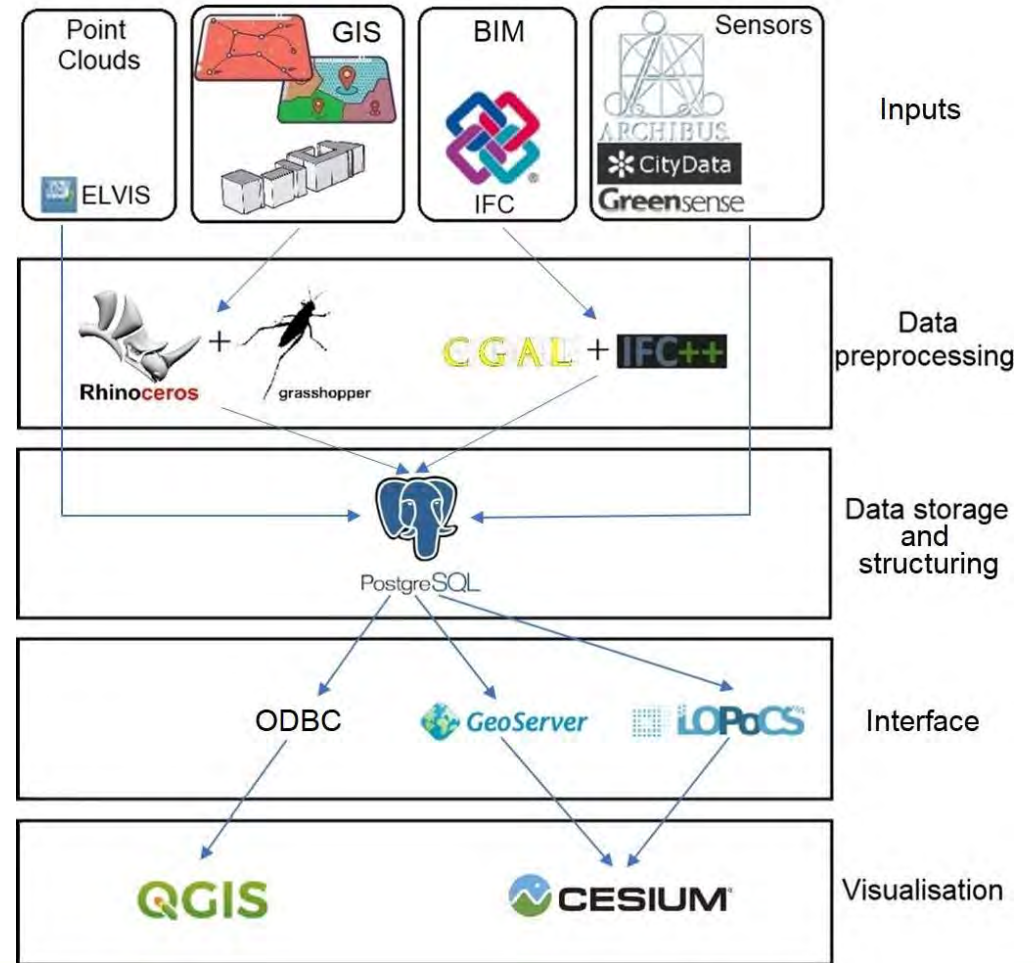

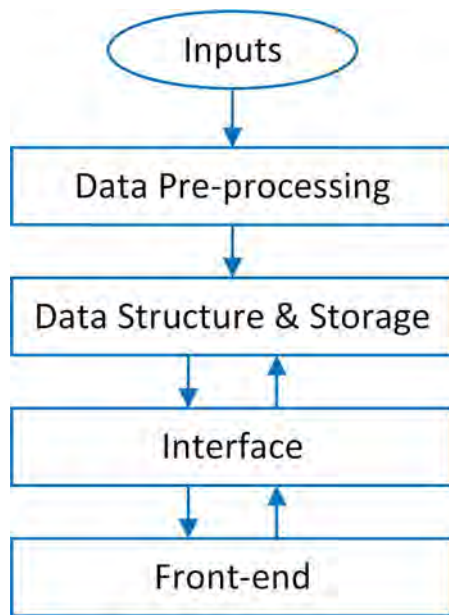

The data

Category	Object	Attributes	Geometry	Relationships
Building	Building footprint	Name, number, area, perimeter, height	Polygon	
	Buildings above footprint		Line	Part of building
	Floor/ Storey		Polygon	
	Roof	roof material, slabs, slab material	Solid/Mesh	Building storey
	Wall	wall type, wall material	Solid/Mesh	Building storey, building
	Slab	material	Solid/Mesh	Building storey, building
	Window	Window style	Polygon Solid/Mesh	Room, building storey, building
	Door	Door style and material	Polygon Solid/Mesh	Room, Building storey
	Stair	Type, Stair material	Solid/Mesh	Building storey
	Ramp	Flight	Solid/Mesh	Stairs, building storey, building
	Column	Type, column material	Solid/Mesh	Building storey
	Curtain walls	Type and material	Solid/Mesh	Building storey, building
	Room/ Space	Name, description	Polygon Solid/Mesh	Building storey, building (Room)
	Beams	beam type and material	Solid/Mesh	Building storey, building
	Indoor furniture	Type	Polygon Solid/Mesh	Building storey, building
Ventilation (riser)	IFC entity, name, material	Solid/Mesh	Building storey, building	
Indoor electricity	Smoke Detector	Type	Point, (Symbol)	
	Warning speakers	Type	Point (Symbol)	
	Emergency exit lighting	Type	Point (Symbol)	
	Light Switch	Type	Point (Symbol)	
City furniture	Bollards, survey marks, fences, walls, seats, bins and ACs	Height, width	Point, line	
Transportation	Roads, walkways, car park lot	Use, function	Line	
Vegetation	Garden and tree	Tree attributes: diameter, id, code, species	Point, Line	
Land use	Cadastral Parcels	owner	Polygon	
Sewer utility network	Sewer pipe	Type	Line	
	Sewer pit	Width, length	Point	
	Sewer manhole	Width, length	Point	
	Sewer inspection opening	Type	Point	

1. Buildings LOD1
2. Surface objects LOD1 (grass, roads, trees)
3. Terrain
4. BIM
5. Energy data per building
6. Air quality data per room

System Architecture (SA)

Terrain

Footprints + Height + Terrain

Footprints + Point cloud

3D objects + Terrain

3D objects + 3D point clouds

Point cloud only

Terrain Intersection Curves (TIC)

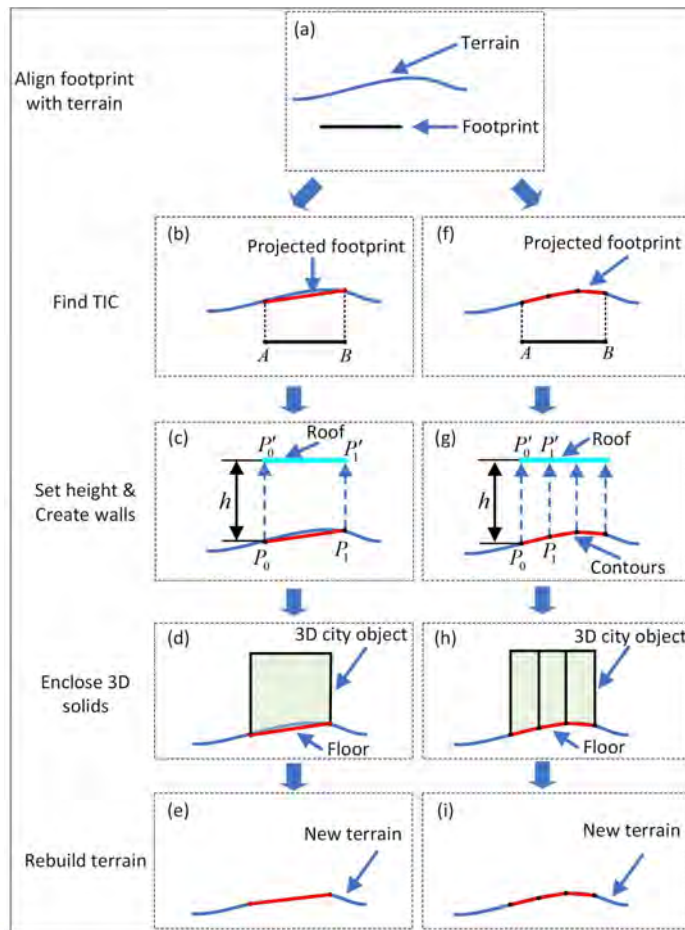

Terrain Intersection Curves (TIC)

3D objects may partially float over or sink into the terrain

when integrating 3D objects with flat bottoms on uneven terrain

Approach for integrating 3D objects and terrain

Footprints + Height + Terrain

- Find TIC by projecting footprints onto the terrain;
- Set height and create walls surfaces of the 3D buildings;
- Generate roof and ground surface to create 3D building (solids);
- Rebuild terrain considering TIC as constraints.

Left. Projecting Vertices of footprints on the Terrain (PVT)

Right. Projecting the whole footprint Polyline on the Terrain (PPT)

BIM/GIS Integration

- Building Information Model (BIM) / Geographic Information System (GIS)
- BIM → **local** coordinate systems
- GIS → **global** coordinate systems

BIM Geo-Referencing: Manual approach

- Current most common practice
- Subjective/error prone
- Limited software support

(a)

(b)

BIM Geo-Referencing: Automatic approach

- Solution: 3 basic steps
 - Use 2D map polygons
 - Compute transformation matrix of alignment with 2D BIM
 - Apply the transformation to the 3D BIM

BIM Geo-Referencing

- Use 2D map polygons

Footprints (EM)

Footprint (OSM)

Convex hulls of the 2D polygons

BIM Top view

2D Convex hulls of the BIM

BIM Geo-Referencing

- Aligning 2D map and 2D BIM polygons

- Approximative rigid matching (Euclidean transformation)
- Adapted from [Goodrich et al., 1999]

- ✓ Input shapes of different size
- ✓ No corresponding points needed
- ✗ Coarse approximation
- ✗ No scaling

- Aligning 2D map and 2D BIM features

- Absolute Orientation (affine transformation) [Horn, 1987]

- ✓ Closed form solution: the best-fit possible in one single step
- ✗ Input shapes of same size
- ✗ Corresponding points required (≥ 3)

 BIM 2D polygon
 GIS 2D polygon

BIM Geo-Referencing

- Apply transformation to 3D BIM
 - 4x4 Transformation matrix is applied to the 3D coordinates of the BIM geometry data.

2D view

3D view

BIM Geo-Referencing

- How good (accurate) is our method?
 - Mostly depends on the map polygon
 - Precise footprint → Precise georeferencing!

Max error: 1.24 m

Max error: 0.29 m

Open-Source Implementation

- Reading BIM data
 - IFC++ (C++ library)
- Geometric operations
 - CGAL (C++ library)
- Alignment
 - Matlab
- Transformation
- Export to database
 - Libpqxx (C++ library)
 - PostGIS (POLYHEDRALSURFACE)

Query and visualisation with QGIS

Query-1: Which buildings are within 100 metres from "Red Centre Building" ?

Electrical Engineering	60.01	GEOMETRYCOLLECTION Z (POLYGON Z ((336482.348728 ...)))
Keith Burrows Theatre - J14	7.18	GEOMETRYCOLLECTION Z (POLYGON Z ((336385.037031 ...)))
.....
Webster Theatres - G15	54.71	GEOMETRYCOLLECTION Z (POLYGON Z ((336409.433132 ...)))
Willis Annex - J18	80.69	GEOMETRYCOLLECTION Z (POLYGON Z ((336509.586164 ...)))

Query and visualisation with QGIS

Query-2: Which rooms of red center building whose height is larger than 38 metres (considering terrain height) and total CO_2 level is larger than 100000 in one week (between Dec.10 and Dec.16 2018) ?

```
SELECT I  
FROM bir  
(SELECT  
FROM m  
WHERE  
GROUP B  
CO2 FROM
```

Room
2034
2035
3034
3035
3040
4035
