Estimate the **value of your human capital** using some statistics about the earnings of this job.

Re: What is the value of your human capital?

by [redacted] - Monday, 23 September 2019, 10:19 AM

My dream job after graduation is to work as an actuarial consultant at one of the larger actuarial consulting firms in practice areas such as banking, health and general insurance.

In order to estimate the value of my human capital, I first went on Payscale to obtain salary statistics for actuaries working in Australia. I found the following graph which shows the average salary by years of experience in the profession.

Pay by Experience Level for Actuary

Source: [Payscale](#)

It can be determined from this graph that pay will increase by 8.1% CAGR for the first 4 years of experience, then increase by 1.7% CAGR for the following 4 years, and 3.6% CAGR between years 10 to 19 of work. The graph doesn't specify how pay will increase after 20 years of work, so I will assume in my own calculations that salary will not continue to grow with more experience in order to be conservative, despite this being very unrealistic in real life. For the sake of simplicity, I will round the growth percentages above and use the following figures for my calculations.

| Year | Annual Salary Growth (%) |
|----------|--------------------------|
| 1 to 4 | 8% |
| 5 to 9 | 2% |
| 10 to 19 | 4% |
| 20+ | 0% |

I will also conservatively assume that pay will increase with inflation to preserve the purchasing power of the salary. The OECD estimates that the future long-term inflation rate in Australia to be 2.5% which I will use for my calculation. The discount rate assumed in my calculation is also 2.5% for simplicity.

In my week 1 discussion post I said that I want to retire between 66 to 67 years old. Since I will be 22 when I start full time work, this means that the duration of my ideal working life will be 45 years.

Combining this all together, **the value of my human capital is approximately \$7.43 million.**

Sunnie, I like how you include soft skill as part of your strategy to increase your human capital. I think being able to impress people with your social and communication skills are essential for landing a job in this world. More importantly, as we progress up the career ladder, social and people skills are even more crucial since you will be managing a team of people to certain extent. Public speaking skill is my weakness and thanks for reminding me to take that into my future upskill.

I also like how you mention meeting the right people at the right time of your career to support you and give you advice. No doubt that a lot of people deserve promotion at their work, but sometimes lucks are just not on their sides, which is why I think keep networking regularly is important too.

“This (increasing the value of my human capital) could be done by **furthering my training or qualifications** by, for example, **obtaining a Masters degree**. This would hopefully increase the average growth in salary per annum, ultimately increasing my human capital value. Further, I could **work longer**.”

*“I personally had the **best experience** in T3 because of **StoryWall** and online delivery how it blended well with the online lectures plus the ED forum. I taught ACTL3182 and ACTL5109 which are highly quantitative, and the students liked the **community built around StoryWall** where they had the **opportunity of learning from each other**, commenting on various solution techniques.”*

*- A/Prof Jonathan Ziveyi, Associate Head of School (Education),
School of Risk and Actuarial Studies*

*“**StoryWall** was a very **good experience for me and the students**. I liked being able to look over the students' work in a low-stakes setting and explaining to them why certain items were mistakes. Because the examples were based on more **real-life problems**, it gave us the **opportunity to discuss a richer set of issues** than what we normally can test for in their assessments. The survey results were very good. We had **94% agree/strongly agree** to the last item: Overall, StoryWall supports my learning. The **marking was also quite straightforward**. My tutor was able to do it with minimal instructions.”*
