

School of Civil and Environmental Engineering Term 1, 2020

CVEN9640 COASTAL ENGINEERING

COURSE DETAILS

Units of Credit 6

Contact hours 4 hours per week (generally 2 - 3 hours presentation of new

concepts & materials, followed by case studies, practice exercises, etc)

Class Weeks 1 – 5; 7 – 10: Wednesday 12 – 4pm Room: CE701

Course Coordinator

Professor Ian Turner

and Co-Lecturer email: ian.turner@unsw.edu.au

office: room 302, Civil & Environmental Engineering Building phone: 80719800 (Water Research Laboratory, Manly Vale)

Co-Lecturer Dr Kristen Splinter

email: k.splinter@unsw.edu.au

office: room 313, Civil & Environmental Engineering Building phone: 80719845 (Water Research Laboratory, Manly Vale)

INFORMATION ABOUT THE COURSE

Note that this course is taught in conjunction with the postgraduate online course CVEN9640

HANDBOOK DESCRIPTION

See link to virtual handbook:

http://www.handbook.unsw.edu.au/postgraduate/courses/2020/CVEN9640.html

OBJECTIVES

This course aims to develop an appreciation of theory of periodic waves in coastal waters, wave growth, refraction, diffraction, shoaling and breaking processes, and to introduce aspects of the measurement, analysis and prediction of waves. Coastal and beach processes are introduced, including tides, storms, currents and elevated water levels, beach morphology, coastal hazards and onshore/alongshore sediment transport. The course will also provide students with theory of wave forces on coastal and ocean structures, with hands-on application to practical engineering design of breakwaters, seawalls, and a range of other marine structures.

List of programme attributes:

- An in-depth engagement with the relevant disciplinary knowledge in its inter-disciplinary context
- Capacity for analytical and critical thinking and for creative problem solving
- Ability to engage independent and reflective learning
- Information literacy
- Skills for collaborative and multi-disciplinary work
- A respect for ethical practice and social responsibility
- Skills for effective communication

TEACHING STRATEGIES

Private Study	 Review lecture material and textbook Do set problems and assignments 	
	 Reflect on class problems and assignments 	
	Download materials from Moodle	
Lectures	Find out what you must learn	
	Case studies	
	 Follow worked examples 	
	 Hear announcements on course changes 	
Practice Exercises	Be guided by Lecturer/Demonstrator	
	 Practice solving set problems 	
	 Ask questions 	
Assessments	 Demonstrate your knowledge and skills 	
(hand in assignments, exam)	 Demonstrate higher understanding and problem solving 	
Field Trip	Site inspections, to set studies in context	

Please note that all lecture and other materials for this course are distributed electronically via Moodle. No paper copies will be supplied in class. It is essential that all students download and bring to class each week printed and/or electronic copies of <u>all</u> the current week's materials.

EXPECTED LEARNING OUTCOMES

At the end of this course, students should be familiar with the coastal engineering approach to wave measurement, analysis, growth and propagation from deep to shallow water; have gained an understanding of beach morphology, coastal hazards and sediment onshore/offshore transport; and developed competence in applying standard coastal engineering approach to calculating wave and current forces on coastal and ocean structures with particular attention to practical performance of breakwaters and seawalls, piles, floating marine units, and solid, slatted or partial depth vertical walls.

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

Le	arning Outcome	EA Stage 1 Competencies
1.	Learn the underlying assumptions and be able to apply the theory of periodic waves in coastal waters, wave growth, refraction, diffraction, shoaling and breaking processes, and to introduce aspects of the measurement, analysis and prediction of waves.	PE1.1 PE1.2 PE1.3 PE2.1
2.	Be introduced to coastal and beach processes, including tides, storms, currents and elevated water levels, beach morphology, coastal hazards	PE1.6 PE 1.4 PE3.1
3.	Learn the fundamental drivers of onshore/alongshore sediment transport in the coastal zone, and be able to apply to a case-study numerical modelling application.	PE1.1 PE1.2 PE1.5 PE2.2 PE3.2
4.	Theory of wave forces on coastal and ocean structures, with hands-on application to practical engineering design of breakwaters, seawalls, and a range of other marine structures	PE1.1 PE1.3 PE2.1 PE3.2 PE3.4

For each hour of contact it is expected that you will put in at least 1.5 hours of private study.

COURSE PROGRAM

TERM 1, 2020

Please refer to Moodle for detailed information about specific content each week

Week	Lecturer	Topic	Assessments Due
1	lan Turner	Waves I	
2	lan Turner	Waves II	
3	lan Turner	Beaches, Hazards, Climate Change	Assignment #1 (Online)
4	Kristen Splinter	Sediment Transport I	
5	Kristen Splinter	Sediment Transport II	
6		NO CLASSES THIS WEEK	
7	lan Turner	Breakwaters and Revetments I	Assignment #2 (Report - Turnitin)
8	lan Turner	SITE INSPECTIONS (off-campus)	
9	lan Turner	Breakwaters and Revetments II & Beach Nourishment	
10	Kristen Splinter	Coastal/Marine Structures	Assignment #3 (Report - Turnitin)

ASSESSMENT

The three assignments (1 x online/timed quiz; 2 x hand-in reports) provide the opportunity for students to develop and demonstrate their understanding across the 3 main themes of this course: waves, sediment transport and coastal structures.

The open book exam enables students to demonstrate their gained knowledge and understanding across the breadth of materials covered in the course.

Supplementary Examinations for Term 1 2020 will be held on Monday 25th – Friday 29st May (inclusive) should you be required to sit one. You are required to be available during these dates. Please do not to make any personal or travel arrangements during this period.

Details of each assessment component, the marks assigned to it, the criteria by which marks will be assigned, and the dates of submission are set out below.

ltem	Length	Weighting	Learning outcomes assessed	Assessment Criteria	Due date and submission requirements	Deadline for absolute fail (0%)	Marks returned
1. Assignment #1	2-hour	10%		This assignment is designed to capture how well	Online quiz in week 3. Available	N/A	
	online		PE1.1	the student understands the course material to	for 24 hrs; one attempt	Must be completed	Week 4
	quiz		PE1.2	the use and appropriate application of linear and	permitted, and once	online within the	
			PE1.3	other wave theories. Marks are given for correct	commenced a maximum of 2	specified 24hrs	
			PE2.1	answers and summed up to form an assignment	hours to complete. Further	period – refer Moodle	
				grade. Specific marking criteria are provided with	details to be provided on	for further details	
				the assignment.	Moodle and in class.		
2. Assignment #2	~10-	20%		This assignment is designed to capture how well	Due Week 7 – refer assignment	1 week after due date	
	page		PE1.1	the student understands the course material	sheet that is available in		Week 9
	report		PE1.2	relating to sediment transport processes. Marks	Moodle for further details.		
	(pdf)		PE2.2	are given for correct answers and summed up to	To be submitted via Moodle		
			PE3.2	form an assignment grade. Specific marking	(Turnitin).		
				criteria are provided with the assignment.			
3. Assignment #3	~10	20%		This assignment is designed to capture how well	Due Week 10 – refer	1 week after due date	
	page		PE1.1	the student understands the course material	assignment sheet that is		Week 12
	report		PE1.2	relating to design of coastal breakwater and	available in Moodle for further

			PE2.2	answers and summed up to form an assignment	Moodle (Turnitin).		
			PE3.2	grade. Specific marking criteria are provided with	, ,		
				the assignment.			
4. Exam	2 hours	50%	As above	The final examination is open book, and is			
				designed to capture the student's knowledge of	Exam Period.		
				the breadth of materials covered in this course.			
				The marks for each individual question are			
				indicated on the exam.			

PENALTIES FOR LATE SUBMISSIONS

Late work will be penalised at the rate of 10% per day after the due time and date have expired. Students who perform poorly in the assignments and practical exercises are recommended to discuss progress with the Lecturer during the Term.

Applying for special consideration: https://student.unsw.edu.au/special-consideration

Note: The Coordinator and/or Lecturer reserves the right to adjust the final scores by scaling if agreed to by the Head of School.

RELEVANT RESOURCES

Specific references will be provided at times during the subject. However, the following are recommended as generally useful.

- Shore Protection Manual, 2 volumes, US Army Coastal Engineering Research Center, 4th Edition, 1984.
- Coastal Engineering Manual (CEM) down load individual chapters for free at (use the search term: 'coastal'): http://www.publications.usace.army.mil/USACE-Publications/Engineer-Manuals/

**** ADDITIONAL TEXTS WILL BE DISCUSSED IN CLASS *****

DATES TO NOTE

Refer to MyUNSW for Important Dates available at:

https://student.unsw.edu.au/dates

PLAGIARISM

Beware! An assignment that includes plagiarised material will receive a 0% Fail, and students who plagiarise may fail the course. Students who plagiarise are also liable to disciplinary action, including exclusion from enrolment.

Plagiarism is the use of another person's work or ideas as if they were your own. When it is necessary or desirable to use other people's material you should adequately acknowledge whose words or ideas they are and where you found them (giving the complete reference details, including page number(s)). The Learning Centre provides further information on what constitutes Plagiarism at:

https://student.unsw.edu.au/plagiarism

ACADEMIC ADVICE

(Formerly known as Common School Information)

For information about:

- Notes on assessments and plagiarism,
- School policy on Supplementary exams,
- Special Considerations: student.unsw.edu.au/special-consideration
- Solutions to Problems,
- Year Managers and Grievance Officer of Teaching and Learning Committee, and

Appendix A: Engineers Australia (EA) Competencies

Stage 1 Competencies for Professional Engineers

		Program Intended Learning Outcomes
	and Skill Base	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals
PE1: Knowledge		PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing
		PE1.3 In-depth understanding of specialist bodies of knowledge
		PE1.4 Discernment of knowledge development and research directions
		PE1.5 Knowledge of engineering design practice
		PE1.6 Understanding of scope, principles, norms, accountabilities of sustainable engineering practice
	Application Ability	PE2.1 Application of established engineering methods to complex problem solving
PE2: Engineering		PE2.2 Fluent application of engineering techniques, tools and resources
		PE2.3 Application of systematic engineering synthesis and design processes
		PE2.4 Application of systematic approaches to the conduct and management of engineering projects
	and Personal Attributes	PE3.1 Ethical conduct and professional accountability
		PE3.2 Effective oral and written communication (professional and lay domains)
PE3: Professional		PE3.3 Creative, innovative and pro-active demeanour
		PE3.4 Professional use and management of information
		PE3.5 Orderly management of self, and professional conduct
		PE3.6 Effective team membership and team leadership
