Course Details

Credit Points 6

Summary of the Course

A course on the design concepts and design of structural elements subject to bending, shear and combined bending and axial compression. Topics include: introduction to limit states design and codes of practice (design objectives; strength and serviceability limit states); loads and load combinations (permanent/dead, imposed/live and wind loads); design of structural steel tension members; Euler column buckling; design of stocky and slender compression members; design of laterally supported steel beams, laterally unsupported steel beams (lateral-torsional buckling in bending and shear strength); steel beam-columns (in-plane and out-of-plane failure); steel members subjected to biaxial bending; design of steel frames, steel connections and detailing (force and moment connections).

Course Aims

The aim of this course is to introduce students to the design codes that govern structural design and to extend the understanding of structural behaviour by studying new concepts in the context of design of steel structures.

This course will also provide you with opportunities to develop the following graduate attributes:

- the capacity for analytical and independent critical thinking; and
- skills related to lifelong learning, such as self-reflection (ability to apply theory to practice in familiar and unfamiliar situations); and
- collaborative and teamwork skills;

Course Learning Outcomes

After successfully completing this course, you should be able to:

Learning Outcome	EA Stage 1 Competencies
1. Employ structural design concepts of structural steel members such as tension members, compression members, flexural members and beam columns and connections in practice	PE1.1, PE1.5, PE2.1
2. Demonstrate an understanding of advanced concepts in structural design	PE2.1
3. Interpret and understand the requirements of a design brief and identify the potential design problems presented by the objectives of the brief	PE2.3, PE3.3
4. Use computers to solve engineering problems	PE2.1
5. Communicate your design in written and graphical form	PE2.1, PE3.4

Teaching Strategies

Following are our suggested approaches to learning in the course.

Private Study

- Review lecture material and read textbook
- Do set problems and assignments
- Reflect on class problems and assignments

Lectures

- Find out what you must learn and read ahead.
- See methods that are not in the textbook
- Follow worked examples
- Listen for announcements on course changes

- Try and understand the principles

Workshops

- Be guided by demonstrators
- Practice solving set problems
- Ask questions

Assessments (multiple choice, tests, examinations, assignments, hand-in tutorials, laboratory reports etc.)

- Demonstrate your knowledge and skills
- Demonstrate higher understanding and problem solving

Assessment

The final grade for this course will normally be based on the sum of the scores from each of the assignments (class work) and the Final Examination. The Final Examination is worth 60% of the final grade if the class work is included and 100% if class work is not included. The class work is worth 40% of the final grade if included. A mark of at least 40% in the Final Examination is required before the class work is included in the final grade. The formal exam scripts will not be returned. Students who perform poorly in the workshops are recommended to discuss progress with the lecturer during the term.

Note: The coordinator reserves the right to adjust the final scores by scaling if agreed by the Head of School.

Assessment Tasks

Assessment task	Weight	Due Date	Student Learning Outcomes Assessed
Four Assignments	40%	Not Applicable	1, 2, 3, 4, 5
Examination	60%	Not Applicable	1, 2, 3, 4, 5

Assessment Details

Assessment 1: Four Assignments

Start date: Not Applicable

Details:

4 Assignments.

Assignment 1: Design and Tension Members. Issued end of Week 1, due 5pm end of Week 3. Worth 20% of this Assessment.

Assignment 2: Compression Members. Issued end of Week 4, due 5pm end of Week 6. Worth 20% of this Assessment.

Assignment 3: Flexural Members. Issued end of Week 6, due 5pm end of Week 8. Worth 30% of this Assessment.

Assignment 4: Connections/Combined Actions. Issued end of Week 8, Due 5pm end of Week 10. Worth 30% of this Assessment.

Assessment 2: Examination

Start date: Not Applicable

Details:

Examination

Attendance Requirements

Students are strongly encouraged to attend all classes and review lecture recordings.

Course Schedule

[View class timetable](#)

Timetable

Date	Type	Content
O Week: 8 February - 12 February		
Week 1: 15 February - 19 February	Lecture	<p>TOPIC: Introduction to structural design</p> <p>LECTURE CONTENT: Introduction, Limit States Design principles, Actions and effects of actions.</p> <p>DEMONSTRATION CONTENT: Introduction, Limit States Design principles, Actions and effects of actions.</p>
Week 2: 22 February - 26 February	Topic	<p>TOPIC: Axially loaded members</p> <p>LECTURE CONTENT: Steel tension members</p> <p>DEMONSTRATION CONTENT: Steel tension members</p>
Week 3: 1 March - 5 March	Topic	<p>TOPIC: Axially loaded members</p> <p>LECTURE CONTENT: Steel compression members</p> <p>DEMONSTRATION CONTENT: Steel compression members</p>
Week 4: 8 March - 12 March	Topic	<p>TOPIC: Axially loaded members, Flexurally loaded members</p> <p>LECTURE CONTENT: In-plane effective length and second-order effects In-plane effective length and second-order effects.</p> <p>DEMONSTRATION CONTENT: In-plane effective length and second-order effects</p>
Week 5: 15 March - 19 March	Topic	<p>TOPIC: Flexurally loaded members</p> <p>LECTURE CONTENT: Steel flexural members</p>

		DEMONSTRATION CONTENT: Steel flexural members
Week 6: 22 March - 26 March	Topic	No teaching
Week 7: 29 March - 2 April	Topic	TOPIC: Flexurally loaded members, Connections LECTURE CONTENT: Steel flexural members Welded and bolted connections DEMONSTRATION CONTENT: Steel flexural members
Week 8: 5 April - 9 April	Topic	TOPIC: Connections LECTURE CONTENT: Welded and bolted connections DEMONSTRATION CONTENT: Welded and bolted connections
Week 9: 12 April - 16 April	Topic	TOPIC: Combined actions LECTURE CONTENT: Steel beam-columns DEMONSTRATION CONTENT: Steel beam-columns
Week 10: 19 April - 23 April	Topic	TOPIC: Combined actions LECTURE CONTENT: Steel beam-columns DEMONSTRATION CONTENT: Steel beam-columns

Course Evaluation and Development

Submission of Assessment Tasks

Please refer to the Moodle page of the course for further guidance on assessment submission.

Academic Honesty and Plagiarism

Beware! An assignment that includes plagiarised material will receive a 0% Fail, and students who plagiarise may fail the course. Students who plagiarise are also liable to disciplinary action, including exclusion from enrolment.

Plagiarism is the use of another person's work or ideas as if they were your own. When it is necessary or desirable to use other people's material you should adequately acknowledge whose words or ideas they are and where you found them (giving the complete reference details, including page number(s)). The Learning Centre provides further information on what constitutes Plagiarism at:

<https://student.unsw.edu.au/plagiarism>

Academic Information

[Key UNSW Dates](#) - eg. Census Date, exam dates, last day to drop a course without academic/financial liability etc.

Final Examinations:

Final exams in Term 1 will be held online between 30th April - 13th May inclusive. You are required to be available on these dates. Please do not to make any personal or travel arrangements during this period.

Supplementary Examinations:

Supplementary Examinations for Term 1 2021 will be held on 24th - 28th May inclusive should you be required to sit one. You are required to be available on these dates. Please do not to make any personal or travel arrangements during this period.

ACADEMIC ADVICE

Appendix: Engineers Australia (EA) Professional Engineer Competency Standard

Program Intended Learning Outcomes	
Knowledge and skill base	
PE1.1 Comprehensive, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline	✓
PE1.2 Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline	
PE1.3 In-depth understanding of specialist bodies of knowledge within the engineering discipline	
PE1.4 Discernment of knowledge development and research directions within the engineering discipline	
PE1.5 Knowledge of engineering design practice and contextual factors impacting the engineering discipline	✓
PE1.6 Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the specific discipline	
Engineering application ability	
PE2.1 Application of established engineering methods to complex engineering problem solving	✓
PE2.2 Fluent application of engineering techniques, tools and resources	
PE2.3 Application of systematic engineering synthesis and design processes	✓
PE2.4 Application of systematic approaches to the conduct and management of engineering projects	
Professional and personal attributes	
PE3.1 Ethical conduct and professional accountability	
PE3.2 Effective oral and written communication in professional and lay domains	
PE3.3 Creative, innovative and pro-active demeanour	✓
PE3.4 Professional use and management of information	✓
PE3.5 Orderly management of self, and professional conduct	
PE3.6 Effective team membership and team leadership
