

Framework for countering misinformation

Building on an extensive review of the research, we developed an evidence-based framework to help you counter misinformation about refugees and migrants. The framework provides a step-by-step guide to help you decide what actions to take when you're faced with falsehoods.

Misinformation is...

Prebunk

Is the misinformation prominent, persuasive and proximate?

Motivational warning and refutational preemption

Pebunk

Reframe the agenda

Figure 1: Decision tree for countering misinformation

If a false claim is likely to spread but hasn't yet, prebunk.

Decision point

Strategy

the strategy

An effective prebunk includes both a motivational warning that alerts people to bad-faith actors, encouraging scepticism and critical thinking, and a preemptive refutation that explains why misinformation is false, helping people to recognise and resist it.

When a false claim is already circulating, you should ask: Is this false claim Prominent, Persuasive and Proximate?

Amplify stories you

want to tell

If yes, debunk.

Use the FMFF method (Fact, Myth, Fallacy, Fact) to make corrections clear, credible and effective by stating the truth, presenting the myth, explaining its flaws, and reinforcing the correct fact.

Fact

Myth

Fact

Fallacy

If no, reframe the agenda.

Instead of amplifying falsehoods, shift your resources to sharing stories that reinforce accurate information and resonate with your audience's values.
