

Informatics Here and Now to Support Efficient Care Coordination

*Translating what we learn from
Linked Data into practice*

Dr Yalchin Oytam

Principal Biostatistician / Manager of Data Analytics
System Integration Monitoring and Evaluation
System Information & Analytics Branch
NSW Ministry of Health

April 2019

The Context:

Increasing Demand on Hospitals and Emergency Departments (ED)

- ▶ *Increased Life Expectancy (Older population)*
- ▶ *Ever improving surgical survival rates*
 - ▶ *Survivors require ongoing Hospital and ED services*
- ▶ *Dominant modes in Lifestyle and Health Behaviour (More food, less exercise)*
 - ▶ *More prevalent chronic conditions (e.g. Diabetes)*

We are engaged in Data Science to increase Healthy Life Expectancy

Overview

Support for Integrated and Collaborative Initiatives

Care Coordination

- ▶ Bridging the Gap between Primary (GP) Care, and Hospital Care (GP Linkage)

Integrated Care

- ▶ System level insights to evaluate / guide early intervention (*Has it worked?*)
- ▶ Improved quantification of likely benefit from Intervention (*For whom will it work?*)
- ▶ Assisting Scale-Up of successful programs (*What does demand look like at state level?*)

NSW Health – GP Linkage Data

Bridging the Gap
between Primary (GP)
Care, and Hospital Care

Linking Primary Health and Hospital Data

- GP visits, ED Presentations, Hospital Admissions

- ▶ First of its kind in Australia (\$11 million funding to go statewide)
- ▶ 150,000 Patients observed over a 5 (GP) to 8 year (ED, Hospital Admissions) period.
- ▶ Excellent coverage of Socioeconomic (via ABS Geocoding) and sociocultural factors
- ▶ Rich with potential Lead Indicators
 - ▶ Undiagnosed chronic conditions
 - ▶ Well managed chronic conditions
 - ▶ Medication history
 - ▶ GP visits, diagnosis
- ▶ Improvements since early tranches
 - ▶ Geocoding is now more refined (SA1)
 - ▶ Tried and tested data quality
 - ▶ Medication & diagnoses time records now more comprehensive

Impact of conditions not diagnosed in Primary Care

- ▶ What can we use to identify well managed chronic conditions?

GP_Diagnosis	APDC_Diagnosis	Test Results	Medication
Diabetes_GP	Diabetes_Hospital	Hba1c (diabetes)	Antidiabetics

- ▶ What does the data show?

Diagnosis	Hospital No	Hospital Yes	GP Antidiabetics NO	Hospital No	Hospital Yes	GP Antidiabetics YES	Hospital No	Hospital Yes
GP No	67,740	1,660	GP_No	67,176	1,369	GP_No	564	291
GP Yes	914	4,372	GP_Yes	323	786	GP_Yes	591	3,586

▶ $\frac{1369}{(1660+914+4372)} = \sim 20\%$ of patients with diabetes are not flagged, not medicated by GP.

Impact of Unrecognised Diabetes on Risk of Unplanned Hospital Admission

- ▶ Controlled factors (over preceding 4+ years) :
 - ▶ ED Presentations
 - ▶ Planned Admissions
 - ▶ Unplanned Admissions
 - ▶ GP visits
 - ▶ Socio-economic status (SES)
 - ▶ BMI, diagnostic tests
 - ▶ Chronic, Acute, Mental conditions

- ▶ Risk of unplanned hospitalisation in subsequent 12 months.
 - ▶ (A) Non smoker, 40s, pattern of GP visits, median SES, no Chronic or Mental conditions, no admissions or ED presentations ; 2.8%
 - ▶ As (A), but with GP flagged Diabetes; 4.6% (Risk Ratio 1.6)
 - ▶ As (A), but with Unrecognized Diabetes: 8.2 % (Risk Ratio 2.9)

	Reference (A)	Diabetes (GP)	Diabetes (Unrecognized)
Risk (Unplanned Admission)	2.8%	4.6%	8.2%
Mean LOS	.4 Days	2 Days	2.7 Days

Hospital Cost (Unrecognized Diabetes) > 2 *(GP managed Diabetes)

HbA1c Test / Diabetes Flag

17	107	37	74.3	1031
18	134	26	83.8	965
19	108	76	58.7	1058

▶ Percentage of patients per GP, who have tested positive (eGFR) for Stage 3+ CKD but are not flagged.

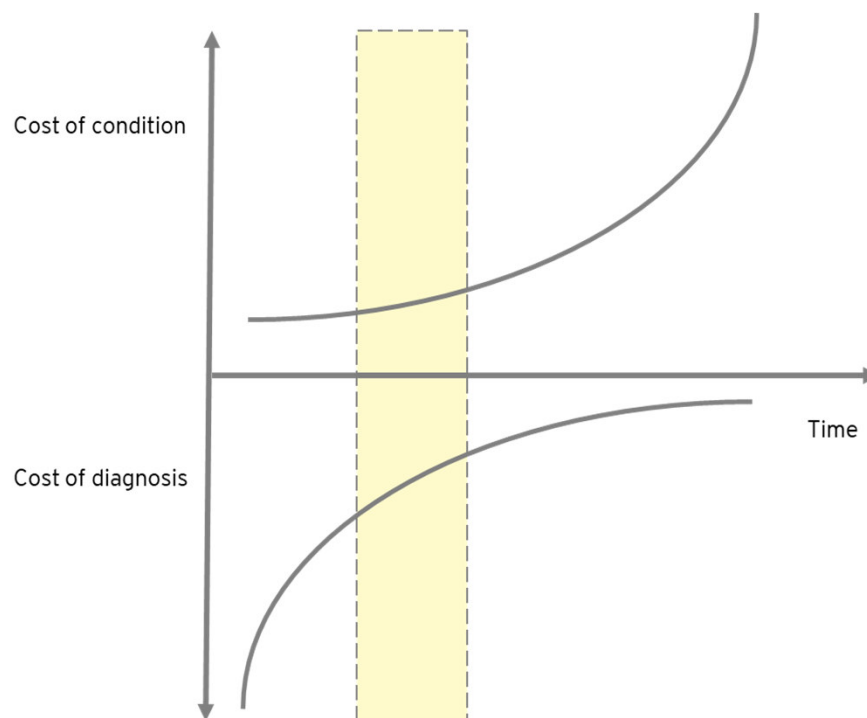

▶ Misflagged figures also reflect changing disease classification

▶ Not cross checked against medication

Importance of Early diagnosis

- ▶ Proactive Primary Care
- ▶ Screening programs with optimised timing and breadth
- ▶ Health education suited to SES levels

- ▶ Understand the 'right' dose of primary care – cost of identifying the disease (GP visits, tests) compared to burden of the disease over time

Assisting Scale-Up of successful programs

What does demand look like at state level?

ED to Community

Cohort selection

- Applying the propensity score matching algorithm from NBM Checkpoint program on state-wide linked data
- Potential cohorts suited for the ED to Community Program are identified and compared at different threshold levels

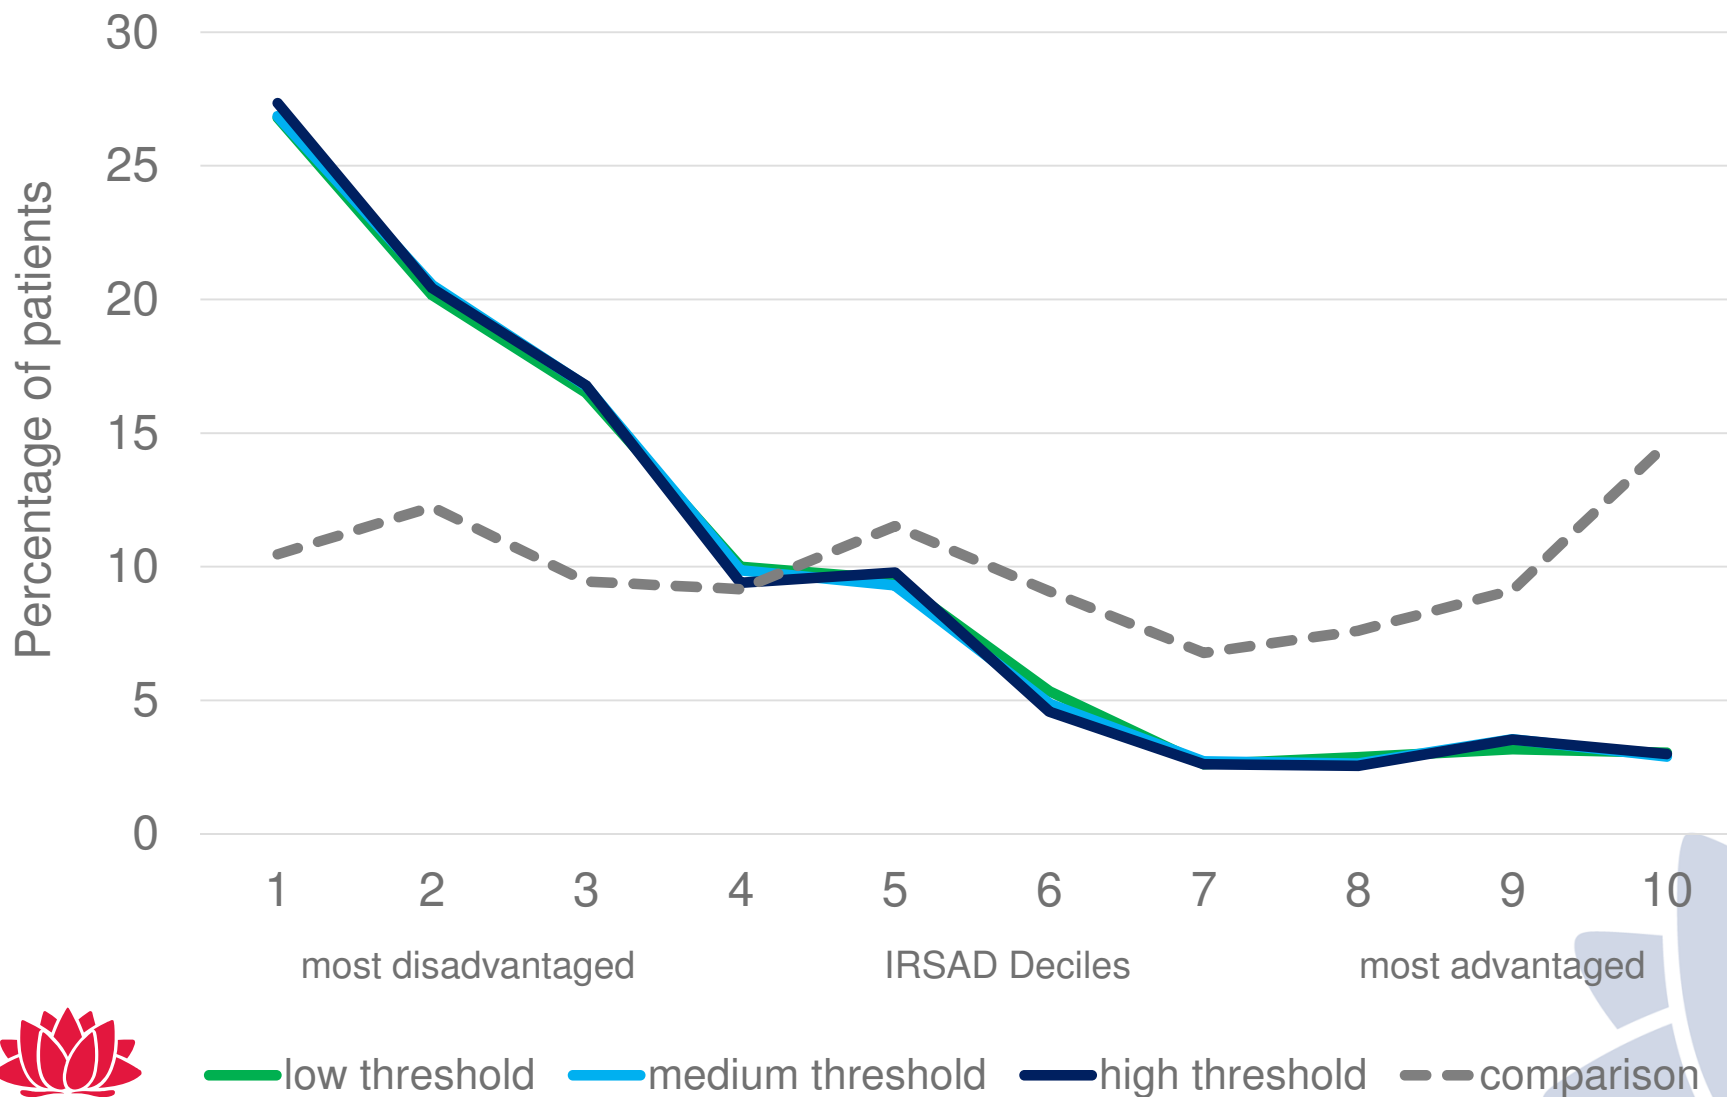

Patient characteristics

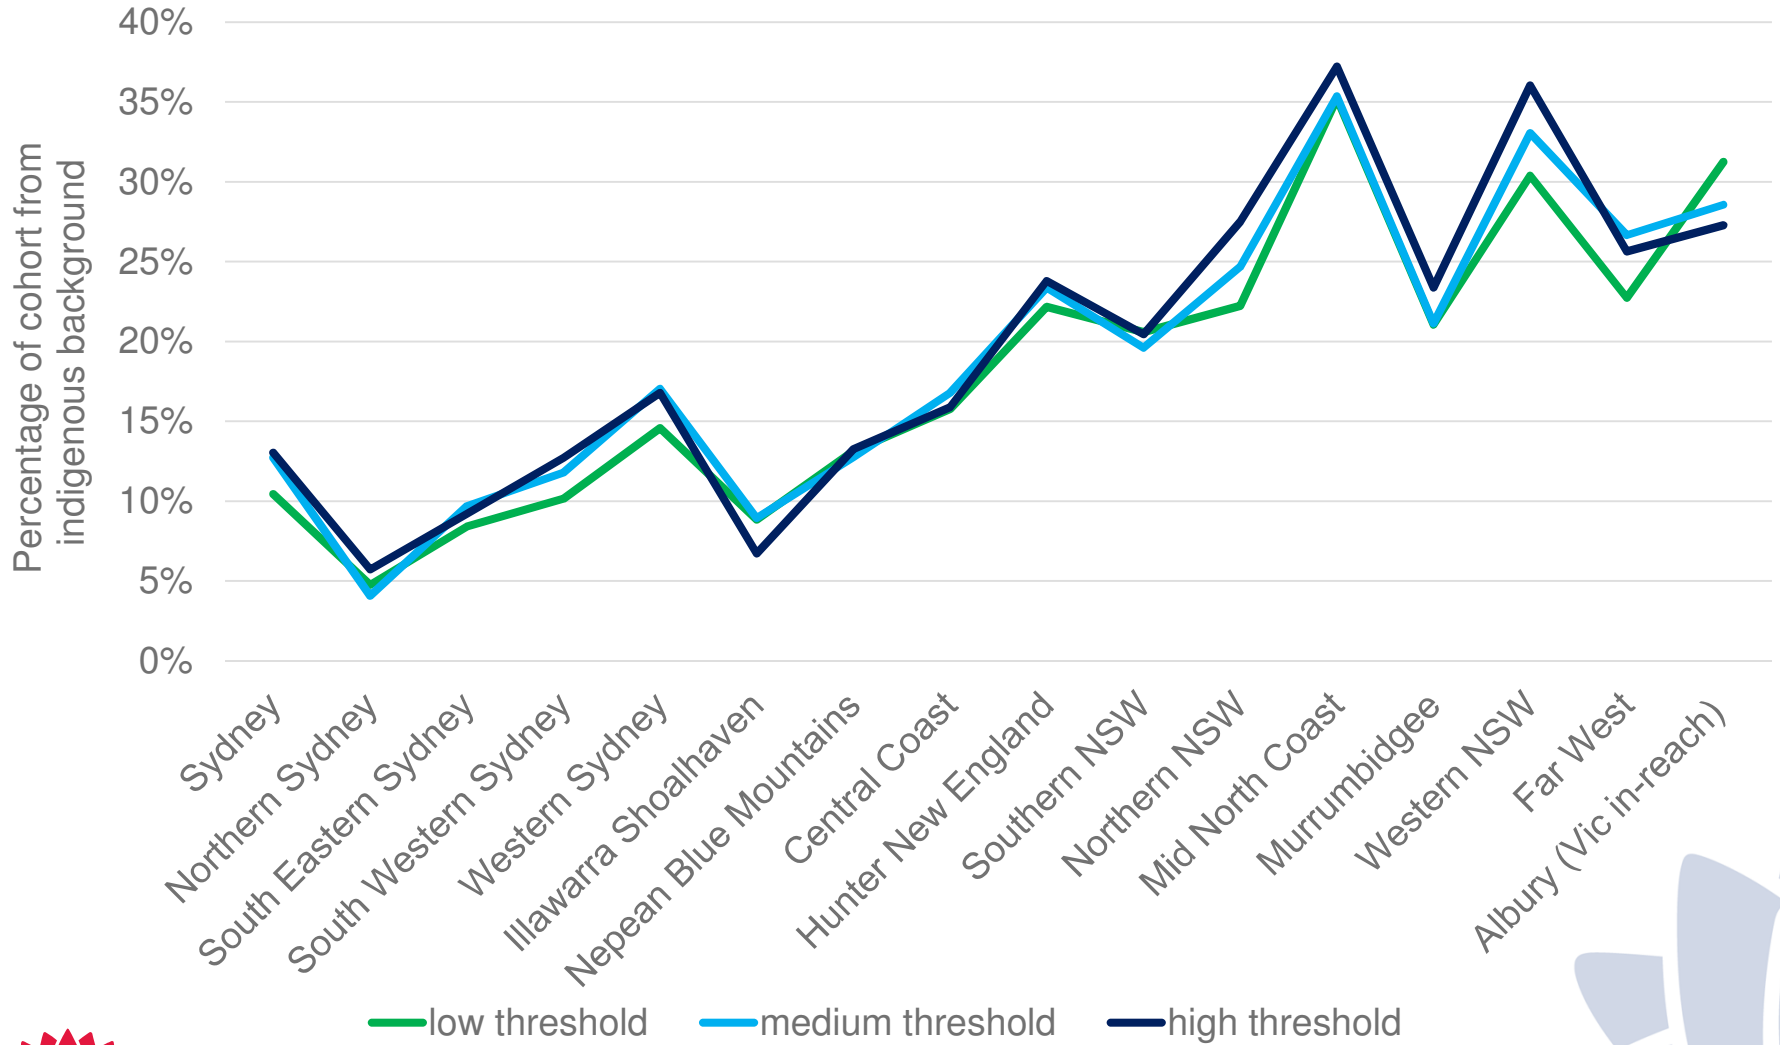

Thresholds	Cohort size	Mortality rate	Indigenous	CALD	Gender (male)
Low	3,031	15%	18%	7.7%	46%
	2,594	15%	19%	7.7%	46%
Medium	2,279	15%	19%	7.5%	45%
	2,052	16%	19%	7.7%	46%
High	1,840	16%	20%	7.8%	45%
comparison	6 million	1.25%	3%	20%	49%

Summary

With Data Science ...

Answers to critical business questions:

- ▶ Disease Specific Optimised Population Health Strategies
- ▶ Has IC intervention worked?
- ▶ If so, for whom does it work? (30-40% cost reduction)
- ▶ *What does demand look like at state level?*

With IC dataset linked to Primary Care Data,

- ▶ *Better understanding of the role Primary Care plays in IC efficacy*
- ▶ *Better planning of resources to meet demand at scale-up*
