

Video transcript: Know your enemy – Lesion

Hi, welcome to another Museum of Human Disease "Know Your Enemy" video.

When you look at these organs, you see some obvious changes to the tissue here, here and here. These visible changes are called lesions.

A lesion refers to any abnormal change or damage to the tissues due to injury or disease, and they can occur anywhere in the human body. In pathology, we can use these lesions to identify what disease processes are taking place or have occurred.
