School Contact Information

For assistance with enrolment, class registration, progression checks and other administrative matters, please see the Nucleus: Student Hub. They are located inside the Library – first right as you enter the main library entrance. You can also contact them via http://unsw.to/webforms or reserve a place in the face-to-face queue using the UniVerse app.

If circumstances outside your control impact on submitting assessments, Special Consideration may be granted, usually in the form of an extension or a supplementary assessment. Applications for Special Consideration must be submitted online.

For course administration matters, please contact the Course Coordinator.
Course Details

Units of Credit 18

Summary of the Course

Advanced Thesis is a research-based course that provides an opportunity for students to bring together engineering principles learned through academic study and professional experience at an advanced level. Students apply these principles to innovatively solve problems such as the development of a specific design, process and/or the investigation of a hypothesis.

The project a student undertakes must be a complex, open-ended problem that allows room for creativity, and the acquisition, analysis and interpretation of results. There must be multiple possible solutions or conclusions at the outset and sufficient complexity to require a degree of project planning from the student.

This course allows students to spend an entire teaching period working solely on their thesis project. It is often used by students wishing to do their project entirely in industry. Students may only enroll in this course with the approval of the specialisation authority and with the agreement of a UNSW academic supervisor.

Course Aims

The aim of this course is that students to become critically conversant in the academic and professional literature on a particular topic, formulate problems in technical terms, manage an extended project and find solutions by applying engineering and/or scientific methods. Students are also expected to explain how their project fits within the discipline and broader societal context. Finally, students demonstrate their ability to autonomously work in a research and development environment.

Course Learning Outcomes

After successfully completing this course, you should be able to:

<table>
<thead>
<tr>
<th>Learning Outcome</th>
<th>EA Stage 1 Competencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Develop a design or a process or investigate a hypothesis following industry and professional engineering standards.</td>
<td>PE2.3, PE2.4, PE1.3, PE1.4, PE1.5, PE3.1, PE3.3</td>
</tr>
<tr>
<td>2. Critically reflect on a specialist body of knowledge related to their thesis topic.</td>
<td>PE1.4, PE3.4</td>
</tr>
<tr>
<td>3. Apply scientific and engineering methods to solve an engineering or food science problem.</td>
<td>PE2.1, PE2.2, PE3.4</td>
</tr>
<tr>
<td>4. Analyse data objectively using quantitative and mathematical methods.</td>
<td>PE1.2, PE2.1, PE2.2, PE1.1</td>
</tr>
<tr>
<td>5. Demonstrate oral and written communication in professional and lay domains.</td>
<td>PE3.2, PE3.5</td>
</tr>
</tbody>
</table>

Professional Recognition of Course
Relationship with the rest of your program and the discipline

Thesis is a capstone course which requires you to employ knowledge and skills developed throughout the rest of your studies. The degree to which you rely on the knowledge from any one course will depend on your project. For example, thesis projects may involve you using your knowledge of chemistry and thermodynamics, your design and process modelling capabilities, or your skills in lifelong learning to develop expertise outside of your regular coursework.

All projects will require you to employ the professional skills you have developed. Good oral and written communication skills will be expected, not only for your assessments but also for the day-to-day activities like meetings and lab work. Teamwork skills are also essential as you work with your supervisor, other researchers, and technical staff.

Beyond university, Thesis provides you with an opportunity to demonstrate to professional bodies and potential employers that you can research and propose solutions to a significant problem, manage large open-ended projects, and communicate your findings in a professional manner.

Teaching Strategies

This is an experiential, enquiry-based learning course structured around single long-form open-ended project. Therefore, main learning activity is self-directed study or project work, at your own speed, under the guidance of your supervisor(s). This will involve conceptually orienting yourself to your project, reading and critiquing relevant literature, applying project management principles to plan and execute your project, and communicating your findings in oral and written form. Project-independent supporting materials including how-to guides are made available online.

The main source of feedback in this course is the regular meetings you have with your supervisor. These meetings are a great time to seek advice on project directions, get help with things you don’t understand, brainstorm/debug issues that you're having, and have your progress evaluated. You should arrange regular weekly or fortnightly meetings with your project supervisor or co-supervisor. These meetings may be in person or online.

Finally, research is a always collaborative exercise. This is primarily found in your interactions with your supervisor(s) and the literature, but projects may also involve group discussions and collaborative work. It is important to engage with and use these activities for learning. However, as thesis is ultimately an individual project, your project deliverables should focus on your ideas and your work, and explicitly acknowledge the contributions of others.

Additional Course Information

Integrity and Respect

The UNSW Student Code of Conduct among other things, expects all students to demonstrate integrity in all their academic work and to treat all staff, students and visitors to the University with courtesy, tolerance and respect.
As a research course students are also expected to comply with the UNSW Research Code of Conduct, particularly the Principles of the Responsible Conduct of Research and Responsibilities of UNSW Researchers outlined in the code, as well as the University's Human Research Ethics Procedure and/or Animal Research Ethics Procedure. For more information visit the UNSW Research Integrity Policies and Procedures page.

Time commitment

CEIC9005 is a 18 UOC course and has no final exam, therefore you are expected to spend a minimum of 450 hours (or up to 45 hours per week) to complete the requirements of this course. Most of this time will be spent in independent study or training. Given the additional demands of completing thesis in a single term, the assessment is spread over a longer period than regular Research Thesis courses.

Competence

Thesis is a capstone course and you are expected to be competent in all the material covered in the previous courses. Little time is available to remEDIATE deficiencies in your knowledge.

Over the course of the term, you will be developing new competencies. The standards we expect, are explained by the marking rubrics provided. Your supervisor will apply these marking guides fairly and provide you with feedback so you can continue to improve over the three thesis courses.

Participation

You are expected to contact your project supervisor early and maintain contact regularly to carry out a suitable project. This would typically involve face-to-face meetings, but also includes email and other electronic means. Allow at least an hour per week for these activities.

You are expected to be proactive in identifying and completing any project dependent preparations including workplace health and safety requirements, and any training or access requirements. You should also be proactive in seeking feedback on your progress from your supervisor. The degree to which you take initiative and engage with your project work will be assessed in each thesis course.

You are encouraged to use the "Course QandA" channel on Teams to discuss challenges faced through this course, ask questions about course content, discuss solutions to tutorial and practice questions. It is expected that students will help each other, and the coordinator will contribute as required. You may also seek live help during the weekly office hours sessions.

Further, as senior students you are expected to be able to work effectively on your own. This includes seeking our help with your project from your supervisor, lab manager or other people involved in the supervision of your project or the course.

Attendance and punctuality

We expect students to be punctual and attend at all scheduled meetings with the coordinator, your supervisor, or their team. If you are unable to attend a pre-arranged meeting, observe normal professional courtesies and inform the parties involved ASAP.
Assessment

Your final grade for CEIC9005 is determined by the marks you receive for assessments in this course. If you do not complete any assessment tasks, you will receive an AF grade and may repeat this course. If you complete one or more assessment items and still fail to satisfy the course requirements, you will receive an FL grade. If you receive an LE grade, it means that marks are missing for one or more of your assessments. You can check which marks are missing in the Moodle gradebook. When all the missing marks are received, we will forward your grade to Student Services for processing.

The Student Gateway provides more details on the UNSW grading system and assessment.

**Assessment 1: Project Specification**

**Submission notes:** You must have completed all the Research Skills lessons before you will be able to access the Project Specification form. This task will be submitted using a Microsoft Form accessible via the link on Moodle.

**Due date:** 9pm Friday, Week 3

Students submit a brief statement of the research question to be investigated by their project. This statement may be based on a project brief supplied by the supervisor but should involve the student contextualising and developing their own initial view of the issues at hand. Students should also prepare a brief project plan (including Gantt chart). Some other project-specific information is also collected at this time - students should discuss the answers to these questions with their supervisor before submission.

The specification will be reviewed by the student’s supervisor and must be resubmitted until a grade of Satisfactory is achieved.

**Assessment 2: Draft Conference Paper Manuscript (Smarthinking feedback)**
**Submission notes:** This task will be submitted via the dedicated assignment activity on Moodle. You will not be able to submit your Smarthinking feedback without receiving a satisfactory grade for your Project Specification.

**Due date:** 9pm Monday, Week 10

Students submit a draft of their Conference paper manuscript (max. 4,500 words) to the Smarthinking service for feedback. It takes up to 24 hours to receive written feedback from Smarthinking, so at least 36h should be allowed before the overall due date.

Students then submit a copy of their feedback from Smarthinking in Moodle by the due date.

**Assessment 3: Seminar**

**Assessment length:** 10-15mins plus Q&A

**Due date:** TBD with supervisor

Students will communicate their research and its results in a seminar for an audience consisting of their supervisor’s research group, several members of academic staff and/or invited experts. The seminar presentation is intended primarily for a specialist audience.

Students will receive feedback in three forms:

1. Discussion with their supervisor before giving the seminar,
2. Q&A session at the end of the seminar, and
3. Marks from the audience against a standard rubric.

**Assessment criteria**

This task will be assessed using the following rubric.

<td>The presentation is structured logically, keeps close to time. Visual aids are adequate. The student is comprehensible and can communicate their ideas to the audience.</td>
<td>The presentation is structured logically, keeps to time and generally flows well. Visual aids support understanding. The student communicates their ideas to the audience clearly.</td>
<td>The presentation is structured logically, keeps to time and flows smoothly. Visual aids enhance understanding. The student communicates their ideas to the audience in a clear and engaging manner.</td>
</tr>
</tbody>
</table>
Assessment 4: Presentation and Q&A

Assessment length: 5 mins
Submission notes: Video presentations will be submitted online via Moodle.
Due date: 9pm Thu, Week 12 (video submission) AND 9am-1pm Mon, Week 13 (Q&A panel)

Students will prepare a short video or poster presentation (5mins) of their research and its results for a general professional audience. Students will answer questions from a panel of academics, either in a separate Q&A session or following their presentation. Presentations will be made available to the panelists prior to the Q&A session.

The presentation and Q&A will be marked by the panel using a standard rubric with comments returned to the student.

Assessment criteria

This task will be assessed using the following rubric.

<table>

</tr>
</tbody>
</table>

**Q&A (30%)**

- **The student is effectively unable to answer questions about the project.**
  - The student attempts to answer questions about the project but clearly doesn't really understand substantial parts of the work properly.
  - The student can answer some questions about the project and does not understand others. They make some use of evidence in their answers.
  - The student understands all the questions and can answer most of them. They make good use evidence to support their answers.
  - The student listens carefully and answers questions easily and directly - they make excellent use of evidence to support their responses.

**Communication (20%)**

- **The presentation is incoherent or incomplete.**
  - The presentation is structured in a confusing manner &/or does not keep to time.
  - The presentation is structured logically, keeps close to time. Visual aids are adequate.
  - The presentation is structured logically, keeps to time and generally flows well.
  - The student communicates their ideas to the audience in a clear and engaging manner.
- **The visual aids diminish understanding. There are multiple deficiencies with the visual aids.**
  - The visual aids are not adequate.
  - The student is hard to understand and struggles to communicate their ideas.
  - The student is comprehensible and can communicate their ideas to the audience.
  - The student communicates their ideas to the audience clearly.
- **The student is unable to communicate their ideas or in comprehensible.**
  - The student is unable to communicate their ideas or in comprehensible.
  - The student communicates their ideas in a clear and engaging manner.
  - The student communicates their ideas to the audience in a clear and engaging manner.

---

**Assessment 5: Conference Paper Manuscript and Supporting Files**

**Assessment length:** 8,000 words

**Submission notes:** This task will be submitted on Moodle via the dedicated Workshop tool. You will not be able to submit your Manuscript until the Draft (Smarthinking) activity is marked complete

**Due date:** 9pm Friday, Week 13
Students will submit a conference paper manuscript (or technical report for industry projects). The paper should briefly set the project in context and describe the motivation and aims of the topic address. The paper will then explain the methodologies employed, before reporting results and discussing their meaning and significance. Students are expected to talk with their supervisor the expected structure and content of their paper, as well as sharing several drafts with them well before the due date.

Students are to submit three things:

1. The final version of the Manuscript as a Microsoft Word or OpenDocument Text file,
2. The Turnitin Similarity Report for the final version of the Manuscript as a PDF file, and
3. An archive file (i.e., zip file) containing supporting project files (consult your supervisor on what to include). This should include draft manuscripts, results files, program code, spreadsheets, etc., it may also include a digital notebook (if you used an electronic notebook). The maximum file size is 200 MB, so you may need to split the files across up to three zip files. Alternatively, you may share the files from your UNSW OneDrive and paste the link in the text entry section of the submission form.

The Manuscript will be marked against a standard rubric by at least two academics (including student's supervisor) according to the Faculty of Engineering Thesis Guidelines with comments returned to the student.

This assignment is submitted through Turnitin and students can see Turnitin similarity reports.

Assessment criteria

This task will be assessed using the following rubric.

| Document Presentation (10%) | The document is poorly structured, does not cohere or shows a lack of understanding of the purpose of its sections. Much effort is required to read and understand the report: writing is poor, many mistakes with spelling and grammar, and possibly inappropriate language style (e.g. too informal). Presentation is poor to the extent that it impedes reading of the document. Examples include inconsistent. | Document is not at a professional level but does make use of headings and sub-headings to indicate document structure. The report is may be difficult to read: writing is just ok, broad idea comes across; spelling and grammar have some flaws, not quite appropriate language style. Although figures and tables are labelled, the formatting is unclear and/or inconsistent to the extent that the reader can lose track of the context. | The document makes some use headings and other stylistic conventions to indicate document structure. The report is reasonably easy to read: there may be some issues with spelling, grammar or style but it doesn't affect comprehension. Figures and diagrams are generally fine, although there may be some issues with the graphical presentation of data - poor choice of axes, overcrowding, poor use of | The document makes good use headings, sub-headings and other stylistic conventions to indicate document structure. The report is easy to read: writing is clear enough, with good spelling and grammar, and reasonable choice of language style. Graphical elements (figures, tables, etc.) are labelled, largely formatted consistently and cited correctly. References in text match reference list. | The document follows a clear and logical structure indicated using headings and other conventions. The report is very easy to read: well-written, with good spelling and grammar, and appropriate language style. Text spacing aids readability. All aspects of formatting are consistent throughout the document. Graphical and tabular presentation of data is appropriate, clear, consistent and economical. |
Assessment 6: Supervisor’s Report

Submission notes: No submission is required.
Due date: 9pm Monday, Week 10

In addition to a written comment on the student’s progress, the supervisor will indicate the degree to which the student has shown initiative, sustained engagement, and diligence in their project work over the project using a standard rubric.

<td>Sustained activity (33%)</td>
<td>No or minimal activity across all areas of the project</td>
<td>No or minimal activity across most areas of the project. It is unlikely a satisfactory thesis project will be completed without a significant change in attitude.</td>
<td>The student is doing enough to progress the project but needs to increase the work harder to ensure they satisfactorily complete their thesis project.</td>
<td>The student is consistently applying themselves and working at a level that will see their project progress to a satisfactory conclusion.</td>
<td>High level of sustained effort throughout the whole term. The student is working at a level that will ensure smooth progress of their thesis project.</td>
<td>Superior evidence of effort. The student is working at a level where there is now opportunity for extending the scope or depth of the project.</td>
</tr>
<tr>
<td>Diligence and competence in performing the task (33%)</td>
<td>No care or competence demonstrated</td>
<td>The student appears to be careless or technically incompetent in doing the work</td>
<td>The student's work is satisfactory – you are fairly sure results from project are useable and trustworthy</td>
<td>The student's work is good – you are confident with student's results</td>
<td>The student's work is professionall y performed and meticulously recorded</td>
<td>The student is very persistent and unrelenting in performing the task, demonstrate superior level of knowledge and applied thinking to solving an engineering problem</td>
</tr>
</tbody>
</table>
Attendance Requirements

Students are expected to attend all scheduled meetings with supervisors, and if applicable, co-supervisors and research groups. Students in Advanced Thesis should also be setting aside significant time each week to complete any training required, as well as regularly attending the lab (or equivalent workspace) to complete their planned project work. Finally, students should ensure they can attend their Thesis Q&A panel.

Course Schedule

Thesis is a research-based course and does not have any regularly scheduled classes. There is an important “Getting Started with Thesis” session at 2pm on the Friday of O-Week. You can ask questions ahead of this session via the Anonymous Questions tab in the Course Q&A. If you are unable to attend, you should watch the recording available from the course Moodle page.

There is also a weekly Thesis Office Hours session at 2-3pm on Mondays with the Course Coordinator. This is an optional online consultation time with no fixed agenda. Join if you want help with anything about this course and its assessments - questions may also be posted anonymously via the Anonymous Questions tab in the Course Q&A. Project specific questions should be directed to your supervisor.

Part of your Project Specification (due Week 3) is to develop a project plan. You should develop this plan in consultation with your supervisor. The table below is suggested plan of what we recommend that you should be doing each week. Remember to set aside some time each week for project management work - review and update your Gantt chart, project risk analysis and resource requirements. You should also include project management as a standing item in your regular meetings with your (co-)supervisor.

<td></td>
<td><strong>Project Kick-Off Meeting</strong> - If you have not already done so, arrange a meeting with your supervisor(s) this week. Make sure to discuss your project topic, initial project work, who you will be working with and how you will communicate with them. You should also ask if your project work will be subject to any confidentially and/or intellectual property arrangements. Identify what WHS training you need to complete. Finally,</td>
</tr>
</tbody>
</table>

View class timetable
arrange your regular weekly or fortnightly meetings with your supervisor(s). Following the meeting, write down your current thoughts on what your project is about and it's intended outcomes.

**Application for Distance Thesis Study** - Students conducting their project with an external organisation and/or outside of the Greater Sydney area, must get approval for distance thesis study from the Thesis Coordinator. Complete the Application for Distance Thesis Study form (available on Moodle) using the information gained from your Kick-Off Meeting, and then send it to your supervisor(s) for their (electronic) signature. Once they've signed it, submit your application using the link on Moodle. You will be notified by email once it is approved.

| Week 1: 12 September - 16 September | Project | Continue with the project work recommended by your supervisor(s), and attend any supervisor or research group meetings they have arranged with you. If you haven't already done so, review confidentially and intellectual property arrangements with your supervisor(s). Complete any Workplace Health & Safety training required. Work through all the **Research Skills Lessons** on Moodle. Work through the tasks outline at the end of the lessons. You should also start work on the reading and other tasks you discussed with your supervisor. Draft a 50-100 word **problem statement** that outlines the research question who will be investigating in your project and share it with your supervisor(s). If you need approval for **Distance Thesis Study** and haven't already done so, submit your completed and signed application using the link on Moodle. |
| Assessment | **Project Supervision** - If you have not already done so, secure a supervisor by following the process outlined on Moodle. You should have completed this process by 5pm on Friday of Week 1, otherwise you should consider starting Advanced Thesis in a later term (when you have secured a supervisor). |
| Week 2: 19 September | Project | Attend any supervisor or research group |
### 23 September

- Attend any supervisor or research group meetings they have arranged with you, and continue with the project work recommended by your supervisor(s).
- Ensure you are using active reading skills to evaluate the literature you are reading.
- Revise your problem statement and prepare a project plan. Discuss with your supervisor.

### Week 3: 26 September - 30 September

**Project**

- Attend any supervisor or research group meetings they have arranged with you, and continue with the project work recommended by your supervisor(s).
- Finalise your problem statement and project plan, and review with your supervisor(s).

### Assessment

**Project Specification**

Submit your project specification by 5pm, Friday.

### Week 4: 3 October - 7 October

**Project**

- Review your final plan with your supervisor and make any adjustments they recommend and then get to work.
- Start executing your project plan, and attend any supervisor or group meetings.

### Week 5: 10 October - 14 October

**Project**

- Continue executing, reviewing, and revising your project plan. Attend any supervisor or group meetings.
- Develop a structure for your Conference Manuscript and discuss with your supervisor(s).

### Week 6: 17 October - 21 October

**Project**

- Continue executing, reviewing, and revising your project plan. Attend any supervisor or group meetings.

### Week 7: 24 October - 28 October

**Project**

- Continue executing, reviewing, and revising your project plan. Attend any supervisor or group meetings.

### Week 8: 31 October - 4 November

**Project**

- Continue executing, reviewing, and revising your project plan. Attend any supervisor or group meetings.

### Week 9: 7 November - 11 November

**Project**

- Continue executing, reviewing, and revising your project plan. Attend any supervisor or group meetings.
- Submit your Draft Manuscript to Smarthinking so that you can submit the feedback on Monday,

Resources

Prescribed Resources

The Moodle page for this course is very important. As well as being a venue for the assessment information, submission and feedback, there are links to resources, advice, and guidance. While, the Research Thesis Projects page (enrollment code co3shyh) provides information about supervision, answers to FAQs and advice on enrolment options.

Microsoft Teams will be used as the main discussion platform. You can ask questions there at any time, or during the weekly office hours session.

You also have access to 3 hours of Smarthinking tutor time. Please see the course Moodle page for instructions on how to use this service.

Recommended Resources

Your supervisor will advise you of books, journal articles and websites where you may find information as a starting point for your research project. After that, it is your responsibility to search out and evaluate information. Students are strongly encouraged to make use of a reference management system like EndNote, Mendeley or BibTeX. The Student Gateway also provides guidance on the particular forms of written communication found in thesis courses:

- Literature Reviews
- Research Proposals
- Honours Theses

Study space for project courses

Students enrolled in selected project-based or laboratory-based courses (e.g. thesis) are granted access to Room 102 on Level 1 of the Science and Engineering Building (Map Ref. E8). Access to this space is subject to the following conditions:

- Students must follow any directions from teaching and technical staff.
- This space is provided for private study and/or small group project meetings related to courses taught by the School of Chemical Engineering.
- Some classes have booked this space and students should vacate the space during these classes.
- Students using the space are expected to leave the space in the same or better condition than they found it. Keeping this in mind, limited consumption of food and drink is permitted.

Failure to observe any of these conditions may result in your access being revoked.

Course Evaluation and Development

We want your feedback on this course whether positive or negative. You can provide verbal or written feedback directly to the course coordinator, through our course’s discussion forum or through the University’s myExperience survey.
Feedback we received from previous offerings of this class have resulted in us

- Introducing a "Getting Started with Thesis" session.
- Introducing lessons on research skills, e.g. working with academic literature, writing critical reviews and researching safely.
- Providing more assistance in written communication via the Smarthinking service.
- Introducing a formative assessment in Week 3, so that you get sense of how you’re going.
- Creating online Office Hours sessions.
- Revising marking rubrics for clarity.
- Preparing guides for selected assessments.

**Laboratory Workshop Information**

The requirements for risk management and lab access will differ between projects. If you have any questions about risk management policies and procedures, please contact the Faculty’s Health, Safety & Environment Team (eng.gen.hse@unsw.edu.au).

**UNSW Supervised Projects**

If your project being directly supervised by UNSW staff, you should consult with your supervisor about risk management for your project.

1. The [School's General Safety](#) page provides an introduction to the University safety system and School-specific arrangements, as well as safety induction information for the SEB (E8), Hilmer (E10), Tyree (H6) and Chemical Sciences (F10) Buildings. All students should at least complete Module 1 which introduces general safety procedures in the School of Chemical Engineering.

2. All projects will involve some desk or office-based activities (e.g. preparing reports, writing code, running simulations). There are risks associated with these activities that are not necessarily low. You should visit the UNSW Office Safety Toolkit page ([https://safety.unsw.edu.au/office-safety-toolkit](https://safety.unsw.edu.au/office-safety-toolkit)) to learn about safety in an office or desktop practice. The pages on Office Hazards and Risks and Workstation Setup will be particularly useful.

3. If your project involves laboratory or field work, you will need to complete the School of Chemical Engineering approval process. The steps involved are outlined on this webpage. To complete this process, you will have to fulfill various training and documentary requirements. Therefore you should allow several weeks to complete this process.

**Industry Supervised/Hosted Projects**

If your project is being hosted/supervised by an external organisation (e.g. a company or research organisation), then you need to comply with that organisation’s risk management policies and procedures.

1. You still need a UNSW supervisor – please consult with them about how they will be involved with your project – at the very least, they will be responsible for the academic administration of your project. They may wish to meet with you periodically to discuss your progress.

2. For the purposes of workplace health and safety legislation, you are considered a worker of that company and they are responsible for your safety.
   - If you are not being paid by the organisation for your thesis work, you are covered by the University’s [personal accident](#) and [public liability](#) insurance policies. A certificate of currency can be supplied.
If you are being paid by the organisation to conduct your thesis work, then you should be covered by their insurance policies. Please check with your industry supervisor.

3. Finally, you **must** formally ask permission to do your project in industry. Do this by completing and submitting the “Application for distance thesis study” form on Moodle. Seeking formal permission ensures there is no confusion about why you are working onsite with an external organisation.

For more information, please read the guides on moving from Industrial Training to Honours, and for Thesis in Industry on the Research Thesis Projects page.

**Project ethics approval**

Does your thesis involve other people doing something for you? If so, it may require ethics approval.

The basic principle is that if you want people to provide you with something, even if just 5 min of their time to answer questions, then you should (i) treat them with suitable dignity and (ii) ensure any possibility that they may be badly affected is absolutely minimised.

When research at UNSW involves people, then it come under the oversight of the UNSW Ethics Committee which must give approval before it proceeds.

You will need to get approval, if your project involves any of the following (more than one may apply):

- a survey, even if done on-line
- an interview, focus group, or other such “qualitative” method
- data mining when individual identities might be revealed
- behavioural observation, e.g. people using something, choices people make, on-line activities
- recording or photography of people, even if in public spaces
- experiments on human reactions (or other abilities)
- human performance, e.g. running, falling, playing music
- testing a device (on people)
- tasting or smelling, e.g. foods
- and, of course, drug trials, body tissues and other medical activities.

Also, projects involving animals will need ethics approval. If your project does require approval, in the first instance, discuss this with your Supervisor.

**Project confidentiality and intellectual property**

Thesis project sometimes have information restrictions imposed upon them, typically a confidentiality agreement for industrially linked projects. If you are unsure whether this applies in your case, consult your supervisor.

If your project is subject to this kind of restriction you will need to ensure that any files you submit to Moodle are encrypted prior to upload and that the parties who have signed the relevant agreement are given copies of the password. Please seek advice from your supervisor in relation to hardcopy hand-in.

Further, students and academic supervisors may be asked to enter into a confidentiality or non-disclosure agreement. Students are entitled to seek independent legal advice before signing such an agreement. University staff should seek advice from the Research Contracts Office &/or UNSW Legal.
Distance study

It is possible to complete your entire project by distance.

You should discuss the particular arrangements for your project with your supervisor. This should include the nature of your project (e.g. types research/design, access to data), how you will meet and how often (at least fortnightly and preferably by video call), accessing to literature and software (e.g. via the UNSW Library, myAccess &/or UNSW VPN/China Access Network).

Then you must complete the “Application for distance thesis study” form available on Moodle. Since you probably won't have a supervisor at your off-campus location, please a reason like "unable to visit campus because of travel restrictions" in the distance supervision field. Next get your supervisor to sign the application. Finally, upload your application using the Upload form via the link on Moodle. You will receive notification in your email if your application is approved or rejected. The notification on Moodle may not change immediately, as it is a manual process.

Note: It is probably best to apply for permission for distance study for all your remaining thesis courses. If you do that, your permission status will be rolled over into future courses and you won't have to apply again next term.
Submission of Assessment Tasks

In the School of Chemical Engineering, all written work will be submitted for assessment via Moodle unless otherwise specified. Attaching cover sheets to uploaded work is generally not required; when you submit work through Moodle for assessment you are agreeing to uphold the Student Code.

Some assessments will require you to complete the work online and it may be difficult for the course coordinator to intervene in the system after the due date. You should ensure that you are familiar with assessment systems well before the due date. If you do this, you will have time to get assistance before the assessment closes.

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with due respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

Late penalties

Unless otherwise specified, submissions received after the due date and time will be penalised at a rate of 5% per day or part thereof (including weekends). For some activities including Moodle quizzes and Team Evaluation surveys, extensions and late submissions are not possible.

Special consideration

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.

UNSW has a Fit to Sit / Submit rule, which means that if you attempt an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW's Special Consideration page.

Note: UNSW does not require a medical certificate for COVID-related absences of 7 days or less, however you must provide formal evidence from your local/state health provider (e.g. NSW Health) that clearly states your name and the date you tested positive (i.e. confirmation of your RAT registration, PCR test result). Longer absences due to extended self-isolation or COVID-related illness will still need documentation such as a medical certificate.

Applications for special consideration will still be required for assessment and participation absences related to COVID-19. Special consideration requests should not be lodged for missing classes if there are no assessment activities in that class.
Academic Honesty and Plagiarism

**Academic integrity** is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage (International Center for Academic Integrity, ‘The Fundamental Values of Academic Integrity’, T. Fishman (ed), Clemson University, 2013). At UNSW, this means that your work must be your own, and others' ideas should be appropriately acknowledged. If you don’t follow these rules, plagiarism may be detected in your work.

Further information about academic integrity and plagiarism can be located at:

- The [Current Students site](#)
- The [ELISE training site](#)

The Conduct and Integrity Unit provides further resources to assist you to understand your conduct obligations as a student: [https://student.unsw.edu.au/conduct](https://student.unsw.edu.au/conduct).

**Referencing** is a way of acknowledging the sources of information that you use to research your assignments. You need to provide a reference whenever you draw on someone else’s words, ideas or research. Not referencing other people’s work can constitute plagiarism. Further information about referencing styles can be located at [https://student.unsw.edu.au/referencing](https://student.unsw.edu.au/referencing).

For assessments in the School of Chemical Engineering, we recommend the use of referencing software such as [Mendeley](#) or [EndNote](#) for managing references and citations. Unless required otherwise specified (i.e. in the assignment instructions) students in the School of Chemical Engineering should use either the APA 7th edition, or the American Chemical Society (ACS) referencing style as canonical author-date and numbered styles respectively.
Academic Information

To help you plan your degree, assistance is available from academic advisors in The Nucleus and also in the School of Chemical Engineering.

Additional support for students

- Current Student Gateway
- Engineering Current Student Resources
- Student Support and Success
- Academic Skills
- Student Wellbeing, Health and Safety
- Equitable Learning Services
- IT Service Centre

Course workload

Course workload is calculated using the Units-Of-Credit (UOC). The normal workload expectation for one UOC is approximately 25 hours per term. This includes class contact hours, private study, other learning activities, preparation and time spent on all assessable work.

Most coursework courses at UNSW are 6 UOC and involve an estimated 150 hours to complete, for both regular and intensive terms. Each course includes a prescribed number of hours per week (h/w) of scheduled face-to-face and/or online contact. Any additional time beyond the prescribed contact hours should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

On-campus class attendance

Physical distancing recommendations must be followed for all face-to-face classes. To ensure this, only students enrolled in those classes will be allowed in the room. Class rosters will be attached to corresponding rooms and circulated among lab demonstrators and tutors. No over-enrolment is allowed in face-to-face class. Students enrolled in online classes can swap their enrolment from online to a limited number of on-campus classes by Sunday, Week 1.

In certain classroom and laboratory situations where physical distancing cannot be maintained or the staff running the session believe that it will not be maintained, face masks will be designated by the course coordinator as mandatory PPE for students and staff. Students are required to bring and use their own face mask. Mask can be purchased from IGA Supermarket (Map B8, Lower Campus), campus pharmacy (Map F14, Middle Campus), the post office (Map F22, Upper Campus) and a vending machine in the foyer of the Biological Sciences Building (Map E26, Upper Campus).

Your health and the health of those in your class is critically important. You must stay at home if you are sick or have been advised to self-isolate by NSW health or government authorities. Current alerts and advice can be found here. Do not come to campus if you have any of the following symptoms: fever (37.5 °C or higher), cough, sore throat, shortness of breath (difficulty breathing), runny nose, loss of taste, or loss of smell. If you need to have a COVID-19 test, you must not come to campus and remain in self-isolation until you receive the results of your test.

You will not be penalised for missing a face-to-face activity due to illness or a requirement to self-
isolate. We will work with you to ensure continuity of learning during your isolation and have plans in place for you to catch up on any content or learning activities you may miss. Where this might not be possible, an application for fee remission may be discussed. Further information is available on any course Moodle or Teams site. For more information, please refer to the FAQs: https://www.covid-19.unsw.edu.au/safe-return-campus-faqs

Note: This course outline sets out description of classes at the date the Course Outline is published. The nature of classes may change during the Term after the Course Outline is published. Moodle should be consulted for the up to date class descriptions. If there is any inconsistency in the description of activities between the University timetable and the Course Outline (as updated in Moodle), the description in the Course Outline/Moodle applies.
