School Contact Information

For assistance with enrolment, class registration, progression checks and other administrative matters, please see [the Nucleus: Student Hub](#). They are located inside the Library – first right as you enter the main library entrance. You can also contact them via <http://unsw.to/webforms> or reserve a place in the face-to-face queue using the UniVerse app.

If circumstances outside your control impact on submitting assessments, Special Consideration may be granted, usually in the form of an extension or a supplementary assessment. Applications for Special Consideration must be submitted [online](#).

For course administration matters, please contact the Course Coordinator.

Questions about the this course should normally be asked during the scheduled class so that everyone can benefit from the answer and discussion.

Course Details

Units of Credit 6

Summary of the Course

Polymers are a central part of today's economy, enabling many of the technologies and materials that make up our everyday lives. But polymers are much more than just the simple packaging plastics that might first come to mind. Today's polymers are amazingly adaptable chemicals that can be tuned and synthesised for some truly amazing applications.

This course focuses on the chemical reactions, mechanisms, and industrial techniques used to synthesise some of the more industrially important polymeric materials. While the course will deal primarily with chemistry, some polymer physics and properties will also be discussed. The course will start with an introduction to polymer science where you will learn what constitutes a polymer, what different classes of polymers exist and what general polymerisation strategies are open to the industrial chemist. The course will then explore step and chain polymerisation, including polycondensation, polyaddition, cationic and anionic chain polymerisation, as well as radical polymerisation. You will also study the industrially important process of copolymerisation in greater depth. In addition, we will discuss methods to analyse polymers, such as size exclusion chromatography. The course will finish with basic structure-property relationships for polymers, as well as introduce the concept of viscoelastic materials – the cornerstone for rubbers, elastomers, and thermoplastic materials.

This course is designed to give insight into the fundamentals of polymer science and therefore suitable for everybody without prior knowledge in polymers. The course would be of particular appeal to students interested in basic polymer chemistry as well as polymer related areas such as material science and the coating/paint industry, nanotechnology, biomaterials, membrane and separation science, as well as the packaging material industries.

Course Aims

The aim of this course is to allow students to understand the breadth of polymers available today, how they are produced, and how their properties are determined, through a combination of theoretical and laboratory-based tasks. This course will introduce students to the wide breadth of polymeric materials that are ubiquitous in modern society while gaining familiarity with common methods of polymer synthesis. Furthermore, this course will also allow students to understand the industrial aspects of large-scale polymer synthesis. Emphasis is placed on developing understanding of relationships between polymer structure and material properties. This course is the prerequisite for CEIC8105 which delves deeper into polymer design and polymer synthesis.

Course Learning Outcomes

After successfully completing this course, you should be able to:

Learning Outcome	EA Stage 1 Competencies
1. Identify the main different types of polymers and how they are typically synthesized	PE1.1, PE1.3
2. Describe fundamental mechanisms related to polymerisation via the main types of polymerisation, and how polymerisation	PE1.1, PE1.3

Learning Outcome	EA Stage 1 Competencies
methods/conditions can be related to polymer structure / characteristics (e.g. molecular weight)	
3. Perform the basics of polymerisation reactions, analyse the outcomes, and optimise the reaction conditions pursuant to a typical polymer engineer	PE1.1, PE1.3
4. Describe how main structural features of polymers determine their physical properties	PE1.1, PE1.3

Teaching Strategies

The path to success in this course is not the memorisation of content and reactions. While there are some kinetic equations that the students may wish to memorise, this course is more about understanding the underlying concepts in polymer science, and developing these concepts so as to establish broader links between polymer science and other industrial engineering subjects. To achieve this goal the student needs to be critical about the content of the course and distinguish between information only and bigger concepts, which help to apply knowledge to new challenges, which the students have never been exposed to before.

There are a number of different learning/teaching activities:

1. Traditional lectures, where the lecturer will explain the material using power point slides. These slides will be available in Moodle.
2. Workshops: Problems to work on (worksheet) will be available on Moodle for each week. The idea is that the students work on these problems before/during class, at which time the lecturer will explain/elaborate on how to solve the problems / answer the questions. These workshops will comprise a significant interactive element.
3. Laboratory component: The student will conduct laboratory work under close supervision of lab demonstrators, and will subsequently prepare lab reports (explained in detail during the course and on Moodle).
4. Assignments: Two assignments will be given – each is to be completed and submitted in a timely fashion as per instructions provided during the course.

Additional Course Information

Assessment

Assessment task	Weight	Due Date	Course Learning Outcomes Assessed
1. Radical Polymerization and Step-wise Polymerization Assignment	15%	20/06/2023 10:00 AM	1, 2, 4
2. Ionic, Metallocene and Insertion Polymerization Assignment	15%	04/08/2023 10:00 AM	1, 2, 4
3. Lab 	30%	To be confirmed	3
4. Final Exam	40%	Exam Period	1, 2, 4

Assessment 1: Radical Polymerization and Step-wise Polymerization Assignment

Due date: 20/06/2023 10:00 AM

The students are given a range of exercises and challenges on radical polymerization and step-wise polymerization. The student is required to individually complete the task using lecture notes and text books. The student should demonstrate capability of applying the theoretical background to specific problems.

Assessment 2: Ionic, Metallocene and Insertion Polymerization Assignment

Due date: 04/08/2023 10:00 AM

The students are given a range of exercises and challenges on ionic, metallocene, insertion polymerization. The student is required to individually complete the task using lecture notes and text books. The student should demonstrate capability of applying the theoretical background to specific problems.

Assessment 3: Lab (Group)

Start date: To be confirmed

Submission notes: All three lab reports (submitted as one) are due 14 days after the last lab has been completed (i.e. submission deadline is different for each lab group). See Moodle for further details.

Due date: To be confirmed

The students are required to carry out lab experiments in small groups. The student must demonstrate that they understand the underlying theory and that they are capable of summarising theory and interpret experimental results in written form.

All three lab reports (submitted as one) are due 14 days after the last lab has been completed (i.e., submission deadline is different for each lab group). See Moodle for further details.

Assessment 4: Final Exam

Submission notes: Date of exam to be confirmed

Due date: Exam Period

Students will answer a range of questions under exam conditions covering the lecture and workshop material. The exam is designed to ensure students have sufficient knowledge of the subject matter for future courses and/or projects. Students will be required to sit this exam '*in person*'.

Attendance Requirements

Students are strongly encouraged to attend all classes and review lecture recordings.

Course Schedule

[View class timetable](#)

Timetable

Date	Type	Content
Week 1: 29 May - 2 June	Online Activity	Basic concepts of polymers/polymerisation.
Week 2: 5 June - 9 June	Lecture	Step polymerisation
	Workshop	Step polymerisation
Week 3: 12 June - 16 June	Lecture	Step polymerisation
	Workshop	Step polymerisation
Week 4: 19 June - 23 June	Online Activity	Chain polymerisation: Radical polymerisation
	Workshop	Chain polymerisation: Radical polymerisation
	Assessment	Radical Polymerization and Step-wise Polymerization Assignment
Week 5: 26 June - 30 June	Online Activity	Chain polymerisation: Radical polymerisation
	Workshop	Chain polymerisation: Radical polymerisation
Week 6: 3 July - 7 July	Online Activity	Flexibility Week
Week 7: 10 July - 14 July	Lecture	Chain Polymerisation: Radical polymerisation Structure-Property Relationships
	Workshop	Chain Polymerisation: Radical polymerisation Structure-Property Relationships
Week 8: 17 July - 21 July	Online Activity	Chain Polymerisation: Ionic polymerisation
	Workshop	Chain Polymerisation: Ionic polymerisation
Week 9: 24 July - 28 July	Online Activity	Chain Polymerisation: Ionic polymerisation
	Workshop	Chain Polymerisation: Ionic polymerisation
Week 10: 31 July - 4 August	Online Activity	Metallocene and Insertion Polymerisation
	Workshop	Metallocene and Insertion Polymerisation

	Assessment	Ionic, Metallocene and Insertion Polymerization Assignment
--	------------	--

Resources

Prescribed Resources

Principles of Polymerization by Odian is the “gold standard” of polymer chemistry, and will be the primary source of material for much of the course. However, several other textbooks will also be employed. Examination of any of the following introductory textbooks is highly recommended, with the more heavily applicable textbooks to the course marked with an asterisk (*).

- *Odian, G, *Principles of Polymerization*, 3rd Ed., Wiley
 - *Sperling, L H, *Introduction to Physical Polymer Science*, 2nd Ed, Wiley
 - *Billmeyer, F W, *Textbook of Polymer Science*, 3rd Ed, Wiley
 - Stevens, M P, *Polymer Chemistry, An Introduction*, 3rd Ed., Oxford
 - *Rodriguez, F, *Principles of Polymer Systems*, 3rd Ed., hpc
 - Brydson, J A, *Plastics Materials*, 5,6 or 7th Ed, Butterworths
 - Allcock H R and Lampe, F W, *Contemporary Polymer Chemistry*, 3rd Ed., Prentice Hall
 - Rudin, A., *Elements of Polymer Science and Engineering*, Academic Press
 - Elias, H-G, *An Introduction to Polymer Science*, VCH
-
- The course is based on the lecture material.
 - The students are expected to attend the lectures since the lecture notes provided cannot replace attendance. Students are encouraged to ask questions during the lecture. However, if questions are not answered to the satisfaction of the student, the student is required to use textbooks or other resources.
 - The workshop is designed to be interactive. The students are expected to prepare the answers to the workshop questions independently at home. During the workshop, the students will discuss the workshop questions together with the workshop leader. The workshop should be a forum for discussion, which should allow students to clarify remaining questions from the lecturer.

Course Evaluation and Development

MyExperience

Submission of Assessment Tasks

In the School of Chemical Engineering, all written work will be submitted for assessment via Moodle unless otherwise specified. Attaching cover sheets to uploaded work is not required unless specifically requested for an individual assessment task; when you submit work through Moodle for assessment you are agreeing to uphold the Student Code.

Some assessments will require you to complete the work online and it may be difficult for the course coordinator to intervene in the system after the due date. You should ensure that you are familiar with assessment systems well before the due date. If you do this, you will have time to get assistance before the assessment closes.

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect. Please make it easy for the markers who are looking at your work to see your achievement and give you due credit.

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

Late penalties

Unless otherwise specified, submissions received after the due date and time will be penalised at a rate of 5% per day or part thereof (including weekends) and will not be accepted more than 5 days late. For some activities including Exams, Quizzes, Peer Feedback, and Team Evaluation surveys, extensions and late submissions are not possible.

Special consideration

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.

UNSW has a [Fit to Sit / Submit rule](#), which means that if you attempt an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW's [Special Consideration page](#).

Please note that for **all** special consideration requests (including COVID-19-related requests), students will need documentary evidence to support absences from any classes or assessments.

Academic Honesty and Plagiarism

Academic integrity is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage (International Center for Academic Integrity, 'The Fundamental Values of Academic Integrity', T. Fishman (ed), Clemson University, 2013). At UNSW, this means that your work must be your own, and others' ideas should be appropriately acknowledged. If you don't follow these rules, plagiarism may be detected in your work.

Further information about academic integrity and plagiarism can be located at:

- The [Current Students site](#)
- The [ELISE training site](#)

The Conduct and Integrity Unit provides further resources to assist you to understand your conduct obligations as a student: <https://student.unsw.edu.au/conduct>.

To help describe what we are looking for, here are some things that we consider to be quite acceptable (even desirable!) actions for many assessments, and some that we consider to be unacceptable in most circumstances. Please check with the instructions for your assessments and your course coordinator if you're unsure. As a rule of thumb, if you don't think you could look the lecturer in the eye and say "this is my own work", then it's not acceptable.

Acceptable actions	Unacceptable actions
✓ reading/searching through material we have given you, including lecture slides, course notes, sample problems, workshop problem solutions	✗ asking for help with an assessment from other students, friends, family
✓ reading/searching lecture transcripts	✗ asking for help on Q&A or homework help websites
✓ reading/searching resources that we have pointed you to as part of this course, including textbooks, journal articles, websites	✗ searching for answers to the specific assessment questions online or in shared documents
✓ reading/searching through your own notes for this course	✗ copying material from any source into your answers
✓ all of the above, for any previous courses	✗ using generative AI tools to complete or substantially complete an assessment for you
✓ using spell checkers, grammar checkers etc to improve the quality of your writing	✗ paying someone else to do the assessment for you
✓ studying course material with other students	

Referencing is a way of acknowledging the sources of information that you use to research your assignments. You need to provide a reference whenever you draw on someone else's words, ideas or research. Not referencing other people's work can constitute plagiarism. Further information about referencing styles can be located at <https://student.unsw.edu.au/referencing>.

For assessments in the School of Chemical Engineering, we recommend the use of referencing software such as [Mendeley](#) or [EndNote](#) for managing references and citations. Unless required otherwise

specified (i.e. in the assignment instructions) students in the School of Chemical Engineering should use either the APA 7th edition, or the American Chemical Society (ACS) referencing style as canonical author-date and numbered styles respectively.

Artificial intelligence tools such as ChatGPT, CodePilot, and built-in tools within Word are modern tools that are useful in some circumstances. In your degree at UNSW, we're teaching you skills that are needed for your professional life, which will include how to use AI tools responsibly plus lots of things that AI tools cannot do for you. AI tools already are (or will soon be) part of professional practice for all of us. However, if we were only teaching you things that AI could do, your degree would be worthless, and you wouldn't have a job in 5 years.

Whether the use of AI tools in an assessment is appropriate will depend on the goals of that assessment. As ever, you should discuss this with your lecturers – there will certainly be assessments where the use of AI tools is encouraged, as well as others where it would interfere with your learning and place you at a disadvantage later. Our goal is to help you learn how to ethically and professionally use the tools available to you. To learn more about the use of AI, [see this discussion we have written](#) where we analyse the strengths and weaknesses of generative AI tools and discuss when it is professionally and ethically appropriate to use them.

While AI may provide useful tools to help with some assessments, UNSW's policy is quite clear that taking the output of generative AI and submitting it as your own work will never be appropriate, just as paying someone else to complete an assessment for you is serious misconduct.

Academic Information

To help you plan your degree, assistance is available from academic advisors in [The Nucleus](#) and also in the [School of Chemical Engineering](#).

Additional support for students

- [Current Student Gateway](#) for information about key dates, access to services, and lots more information
- [Engineering Student Life - Current Student Resources](#) for information about everything from getting to campus to our first year guide
- [Student Support and Success](#) for our UNSW team dedicated to helping with university life, visas, wellbeing, and academic performance
- [Academic Skills](#) to brush up on some study skills, time management skills, get one-on-one support in developing good learning habits, or join workshops on skills development
- [Student Wellbeing, Health and Safety](#) for information on the UNSW health services, mental health support, and lots of other useful wellbeing resources
- [Equitable Learning Services](#) for assistance with long term conditions that impact on your studies
- [IT Service Centre](#) for everything to do with computing, including installing UNSW licensed software, access to computing systems, on-campus WIFI and off-campus VPNs

Course workload

Course workload is calculated using the Units-Of-Credit (UOC). The normal workload expectation for one UOC is approximately 25 hours per term. This includes class contact hours, private study, other learning activities, preparation and time spent on all assessable work.

Most coursework courses at UNSW are 6 UOC and involve an estimated 150 hours to complete, for both regular and intensive terms. Each course includes a prescribed number of hours per week (h/w) of scheduled face-to-face and/or online contact. Any additional time beyond the prescribed contact hours should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations. Most 6 UoC courses will involve approximately 10-12 hours per week of work on your part. If you're not sure what to do in these hours of independent study, the resources on the [UNSW Academic Skills](#) pages offer some suggestions including: making summaries of lectures, read/summarise sections from the textbook, attempt workshop problems, reattempting workshop problems with some hints from the solutions, looking for additional problems in the textbook.

Full-time enrolment at university means that it is a *full-time* occupation for you and so you would typically need to devote 35 hours per week to your studies to succeed. Full-time enrolment at university is definitely incompatible with full-time employment. Part-time/casual employment can certainly fit into your study schedule but you will have to carefully balance your study obligations with that work and decide how much time for leisure, family, and sleep you want left after fulfilling your commitments to study and work. Everyone only gets 168 hours per week; overloading yourself with both study commitments and work commitments leads to poor outcomes and dissatisfaction with both, overtiredness, mental health issues, and general poor quality of life.

On-campus class attendance

In 2023, most classes at UNSW are running in a face-to-face mode only. Attendance is expected as is

participation in the classes. As an evidence-driven engineer or scientist, you'll be interested to know that education research has shown students learn more effectively when they come to class, and less effectively from lecture catch-up recordings. If you have to miss a class due to illness, for example, we expect you to catch up in your time, and within the coming couple of days.

For most courses that are running in an "in person" mode:

- Lectures are normally recorded to provide an opportunity to review material after the lecture; lecture recordings are not a substitute for attending and engaging with the live class.
- Workshops/tutorials are not normally recorded as the activities that are run within those sessions normally cannot be captured by a recording. These activities may also include assessable activities in some or all weeks of the term.
- Laboratories are not recorded and require in-person attendance. Missing laboratory sessions may require you to do a make-up session later in the term; if you miss too many laboratory sessions, it may be necessary to seek a Permitted Withdrawal from the course and reattempt it next year, or end up with an Unsatisfactory Fail for the course.
- Assessments will often require in-person attendance in a timetabled class or a scheduled examination.

This course outline will have further details in the Course Schedule and Assessment sections.

Class numbers are capped in each class to ensure appropriate facilities are available, to maintain student:staff ratios, and to help maintain adequate ventilation in the spaces. Only students enrolled in each specific classes will be allowed in the room. Class rosters will be attached to corresponding rooms and circulated among lab demonstrators and tutors. No over-enrolment is allowed in face-to-face classes.

In certain classroom and laboratory situations where physical distancing cannot be maintained or the staff running the session believe that it will not be maintained, face masks will be designated by the course coordinator as **mandatory PPE** for students and staff. Students are required to bring and use their own face mask. Mask can be purchased from IGA Supermarket (Map B8, Lower Campus), campus pharmacy (Map F14, Middle Campus), the post office (Map F22, Upper Campus) and a vending machine in the foyer of the Biological Sciences Building (Map E26, Upper Campus).

Your health and the health of those in your class is critically important. You must stay at home if you have COVID-19 or have been advised to self-isolate by [NSW health](#) or government authorities.

Asking Questions

Asking questions is an important part of learning. Learning to ask good questions and building the confidence to do so in front of others is an important professional skill that you need to develop. The best place to ask questions is during the scheduled classes for this course, with the obvious exception being questions that are private in nature such as special consideration or equitable learning plans. Between classes, you might also think of questions — some of those you might save up for the next class (write them down!), and some of them you might ask in a Q&A channel on Teams or a Q&A forum on Moodle. Please understand that staff won't be able to answer questions on Teams/Moodle immediately but will endeavour to do so during their regular working hours (i.e. probably not at midnight!) and when they are next working on this particular course (i.e. it might be a day or two). Please respect that staff are juggling multiple work responsibilities (teaching more than one course, supervising research students, doing experiments, writing grants, ...) and also need to have balance between work and the rest of their life.

Note: This course outline sets out description of classes at the date the Course Outline is published. The nature of classes may change during the Term after the Course Outline is published. Moodle should be consulted for the up to date class descriptions. If there is any inconsistency in the description of activities between the University timetable and the Course Outline (as updated in Moodle), the description in the Course Outline/Moodle applies.

Appendix: Engineers Australia (EA) Professional Engineer Competency Standard

Program Intended Learning Outcomes	
Knowledge and skill base	
PE1.1 Comprehensive, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline	✓
PE1.2 Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline	
PE1.3 In-depth understanding of specialist bodies of knowledge within the engineering discipline	✓
PE1.4 Discernment of knowledge development and research directions within the engineering discipline	
PE1.5 Knowledge of engineering design practice and contextual factors impacting the engineering discipline	
PE1.6 Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the specific discipline	
Engineering application ability	
PE2.1 Application of established engineering methods to complex engineering problem solving	
PE2.2 Fluent application of engineering techniques, tools and resources	
PE2.3 Application of systematic engineering synthesis and design processes	
PE2.4 Application of systematic approaches to the conduct and management of engineering projects	
Professional and personal attributes	
PE3.1 Ethical conduct and professional accountability	
PE3.2 Effective oral and written communication in professional and lay domains	
PE3.3 Creative, innovative and pro-active demeanour	
PE3.4 Professional use and management of information	
PE3.5 Orderly management of self, and professional conduct	
PE3.6 Effective team membership and team leadership
