School Contact Information

- **Engineering Student Support Services** – The Nucleus - enrolment, progression checks, clash requests, course issues or program-related queries

- **Engineering Industrial Training** – Industrial training questions

- **UNSW Study Abroad** – study abroad student enquiries (for inbound students)

- **UNSW Exchange** – student exchange enquiries (for inbound students)

- **UNSW Future Students** – potential student enquiries e.g. admissions, fees, programs, credit transfer

Phone

- (+61 2) 9385 8500 – Nucleus Student Hub

- (+61 2) 9385 7661 – Engineering Industrial Training

- (+61 2) 9385 3179 – UNSW Study Abroad and UNSW Exchange (for inbound students)
Course Details

Units of Credit 6

Summary of the Course

A course on the advanced analysis and design of structural elements for students looking towards a career in Structural Engineering. The course will build on your knowledge in structural steel design to introduce you to detailed design of bolt and weld connections, design of pin connections, and the design and analysis of composite steel-concrete structures at the serviceability and strength limit states.

Course Aims

The aim of this course is to extend the understanding of structural behaviour by studying new concepts in the context of design of steel and composite steel-concrete structures.

Course Learning Outcomes

1. Demonstrate and identify stress transfer mechanisms in steel connections.
2. Analyse and design bolt, weld, and pin steel connections according to Australian Standards, AS4100.
3. Relate and explain differences between concrete, steel, and composite (steel-concrete) construction techniques.
4. Compare between elastic and plastic methods used for analysing steel-concrete composite structures.
5. Analyse and design composite beams and columns according to Australian Standard AS2723 for strength and serviceability.

Teaching Strategies

Private Study

- Review lecture material and textbook
- Do weekly set problems
- Reflect on class problems and practicing problems
- Download materials from Moodle
- Keep up with notices and find out marks via Moodle

Lectures

- Find out what you must learn
- See methods that are not in the textbook
- Follow worked examples
- Hear announcements on course changes

Workshops

- Be guided by Demonstrators
- Practice solving set problems
- Ask questions
Assessments

- Demonstrate your knowledge and skills
- Demonstrate higher understanding and problem solving
Assessment

Assessment 1: Weekly assignments

9 Homework Assignments will be available on moodle on a weekly basis. You will need to submit these assignments online to the moodle link. The assignment should be hand-written and scanned. A general marking of Satisfactory = 100, Unsatisfactory = 50, Null = 0 will be given for each assignment and these will be posted on moodle on a weekly basis. A zero score will be given if you do not submit the assignment in due date.

Each assignment worth two marks of the total mark.

These assignments will keep you up-to-date with the course material, and will encourage you to practice some problems on a weekly basis.

Assessment 2: Final Exam

The course learning outcomes include a significant level of technical learning, calculations, and engineering understanding of problems. These outcomes can be effectively and ideally assessed in an exam environment that can reflect the students’ understanding of concepts, and the students’ abilities to make decisions and solve problems within limited time. The final exam will be held under open book conditions. You need to score at least 40% in the final exam to be able to pass the course.

Assessment 3: Mid-term exam

The mid-term exam will be assessed on the basis of technical accuracy of calculations and evidence of good engineering judgment. The mid-term exam will be held under open book conditions.
Attendance Requirements

Students are strongly encouraged to attend all classes and review lecture recordings.

• Textbooks:

• Standards:

AS4100. 1998 “Steel Structures”. Australian Standards.

Submission of Assessment Tasks

Please refer to the Moodle page of the course for further guidance on assessment submission.

UNSW has a standard late submission penalty of:

- 5% per day, for all assessments where a penalty applies, capped at five days (120 hours), after which a student cannot submit an assessment, and no permitted variation.
Academic Honesty and Plagiarism

Beware! An assignment that includes plagiarised material will receive a 0% Fail, and students who plagiarise may fail the course. Students who plagiarise are also liable to disciplinary action, including exclusion from enrolment.

Plagiarism is the use of another person’s work or ideas as if they were your own. When it is necessary or desirable to use other people’s material you should adequately acknowledge whose words or ideas they are and where you found them (giving the complete reference details, including page number(s)). The Learning Centre provides further information on what constitutes Plagiarism at:

https://student.unsw.edu.au/plagiarism
Academic Information

Final Examinations:

Final exams in T2 2022 will be held online between 12th - 25th August 2022 inclusive, and supplementary exams between 5th - 9th September 2022 inclusive. You are required to be available on these dates. Please do not to make any personal or travel arrangements during this period.

Disclaimer

This course outline sets out description of classes at the date the Course Outline is published. The nature of classes may change during the Term after the Course Outline is published. Moodle should be consulted for the up to date class descriptions. If there is any inconsistency in the description of activities between the University timetable and the Course Outline (as updated in Moodle), the description in the Course Outline/Moodle applies.
