Course Staff
Course Convener: Dr. Patrick A Burr, Room 643, MSEB (E10), p.burr@unsw.edu.au
Lecturers: Dr. Lou Vance, Dr. Dan Gregg, Dr. Kapila Fernando

Consultations: You are encouraged to ask questions on the course material, after the lecture class times in the first instance, rather than via email. ALL email enquiries should be made from your student email address with ENGG9743 in the subject line, otherwise they will not be answered.

Keeping Informed: Announcements may be made during classes, via email (to your student email address) and/or via online learning and teaching platforms – in this course, we will use Moodle https://moodle.telt.unsw.edu.au/login/index.php. Please note that you will be deemed to have received this information, so you should take careful note of all announcements.

Course Summary

Contact Hours
The course will be delivered on Tuesday evenings, 6-9pm, in G025 of the Quadrangle building (E15). The subject will be supported by tutorial sheets and coursework assignments with staff support from the School of Electrical Engineering and Telecommunications.

Context and Aims
The nuclear fuel cycle is a vital aspect of nuclear engineering and this class covers the cycle from extraction to storage. Fuel cycles vary with reactor technology and the course will review each of the existing processes in use. The course will also review improvements made in recycling processes.

The waste management aspects of this course focuses on the growing need in the nuclear industry to understand the physics and engineering aspects of dealing with radiologically contaminated waste, including classification, processing, storage and disposal options.

This course is designed to give an in-depth, practical knowledge of the nuclear fuel cycle from the metallurgy of Uranium to the disposition of spent reactor fuel. It will provide details of current and future nuclear reactor designs for the generation of electricity, their life cycle and decommissioning. This course will not only provide a comprehensive study of the traditional fuel cycle (the Uranium/Plutonium once-through cycle), but it will also discuss the closure of the nuclear fuel cycle as well as fuel cycles that may be the future of nuclear power.. The course also provides an introduction to the principles and practices of waste management and disposal.
Assessment
Coursework Assignments (x3) 10% each
Final Exam (3 hours) 70%

Course Details

Credits
This is a 6 UoC course and the expected workload is 10 hours per week.

Relationship to Other Courses
This is a postgraduate course convened by School of Electrical Engineering and Telecommunications. It is a core class on the MEngSci Nuclear Engineering specialization and can be taken as an elective by 3rd or 4th year students from other schools and faculties on the approval of home school and the ENGG9743 course convener.

Pre-requisites and Assumed Knowledge
A pre-requisite for this course is ENGG9741 Introduction to Nuclear Engineering or equivalent. It is essential that you are familiar with basic engineering principles and mathematical skills before this course is attempted. Prior understanding of nuclear fission is useful as is a grounding in chemistry and physics.

Following Courses
None.

Learning Outcomes
After successful completion of this course, you should be able to:

1. Describe the fundamentals of Uranium mining, milling and conversions
2. Describe current and novel Uranium enrichment methods
3. Explain fuel fabrication techniques
4. Describe and explain fuel performance, burn-up and storage
5. Detail fuel reprocessing techniques
6. Describe the operation, advantages and disadvantages of proposed Gen IV reactor systems
7. Explain the options for processing high level waste for storage and disposal
8. Explain predisposal management options, processes and challenges associated with radioactive waste.
9. Explain site selection, site characterisation and development waste acceptance criteria for low and intermediate level radioactive waste
10. Explain the key principles associated with the near surface disposal of radioactive waste.
This course is designed to provide the above learning outcomes which arise from targeted
gradient capabilities listed in Appendix A. The targeted graduate capabilities broadly
support the UNSW and Faculty of Engineering graduate capabilities (listed in Appendix B).
This course also addresses the Engineers Australia (National Accreditation Body) Stage I
competency standard as outlined in Appendix C.

Syllabus

1. Mining, milling and enrichment
2. Fuel fabrication
3. Nuclear reactors
4. Spent fuel
5. Reprocessing nuclear fuel
6. Processing High Level Waste for storage and disposal
7. Pre-disposal management of radioactive waste
8. Near surface disposal of radioactive waste
9. Site selection, site characterisation and Waste Acceptance Criteria

Lecturers

Lou Vance: Dr Lou Vance is currently Chief Research Scientist at ANSTO and has 37
years of experience researching in the nuclear engineering sector. He has held a
Leverhulme visiting professorship at the University of Cambridge, UK in 2008. He has
research experience at institutions in the US, UK and Canada and for many years has been
an active contributor to various international conferences on radioactive waste and its
immobilisation.

Kapila Fernando: Dr Kapila Fernando is a nuclear waste management professional. He is
currently the Waste Projects and Strategic Planning Manager, responsible for developing
and maintaining waste management capabilities to support nuclear medicine production,
reactor operations, and research activities at ANSTO. He has over 18 years leadership
experience in Capital Programs, Strategic Planning and Operations Management across
Mining, Chemical Processing and Nuclear Waste Management sectors. Kapila has research
experience in cementitious wasteforms, predicting service life of cementitious structures, ion
exchange, gold cyanidation, and cyanide detoxification. He a Lecturer in Nuclear Fuel Cycle
and Waste Management at University of NSW, PMP trainer at the Sydney Chapter of PMI,
Research Lead at the Australian Centre for Infrastructure Durability (ACID), a member of the
Program Advisory Committee (PAC) of WM Symposia (USA) and is the Treasurer of the
Australian Nuclear Association. Kapila represents Australia in IAEA networks on nuclear
waste characterisation (LABONET) and disposal (DISPONET).

Dan Gregg: Daniel Gregg is a research scientist with over 15 years of experience in
Chemistry and Materials Science. Daniel completed his Bachelor of Chemistry with first
class honours at Victoria University in Wellington, New Zealand, following which he worked
for a year as a research chemist in industry. Daniel completed his PhD in Materials
Chemistry within the Inorganic and Synthetic Materials Chemistry group at Trinity College
Dublin. He then completed two postdoctoral positions in Ireland, conducting groundbreaking
research in Materials Science including the development of a novel family of ‘soft’ materials
with application as nano-wires. During this time Daniel was appointed a teaching fellow in
the School of Chemistry where he enjoyed two years as course coordinator and lecturer for
a second year Chemistry course. In 2009, Daniel relocated to Melbourne, Australia, where
he worked for a year in industry, applying his experience to the development of new pharmaceutical drug candidates. Daniel then moved to Sydney in 2010 where he was appointed Research Scientist in the Institute of Materials Engineering at ANSTO. He currently leads the Nuclear Wasteforms Research Activity group where he focuses on the development of materials with utility in the nuclear fuel cycle and next generation nuclear energy systems. Daniel is a member of the International Scientific Advisory Committee, for the Materials Research Society Symposium on the Scientific Basis for Nuclear Waste Management. Aside from his research, Daniel is an enthusiastic science communicator and a keen promoter of science to high school and university students.

Teaching Strategies

Delivery Mode
The teaching in this course aims at establishing a good fundamental understanding of the areas covered using:

- Formal face-to-face lectures, which provide you with a focus on the core analytical material in the course, together with qualitative, alternative explanations to aid your understanding;
- Tutorials, which allow for exercises in problem solving and allow time for you to resolve problems in understanding of lecture material;

Learning in this course
You are expected to attend all lectures, and tutorials in order to maximise learning. In addition to the lecture notes/video, you should read relevant sections of the recommended text. Reading additional texts will further enhance your learning experience. Group learning is also encouraged. UNSW assumes that self-directed study of this kind is undertaken in addition to attending face-to-face classes throughout the course.

Tutorial classes
You should attempt all of your problem sheet questions in advance of attending the tutorial classes. The importance of adequate preparation prior to each tutorial cannot be overemphasized, as the effectiveness and usefulness of the tutorial depends to a large extent on this preparation. Group learning is encouraged. Answers for these questions will be discussed during the tutorial class and the tutor will cover the more complex questions in the tutorial class. In addition, during the tutorial class, 1-2 new questions that are not in your notes may be provided by the tutor, for you to try in class. These questions and solutions may not be made available on the web, so it is worthwhile for you to attend your tutorial classes to gain maximum benefit from this course.

Assessment
The assessment scheme in this course reflects the intention to assess your learning progress through the semester. Ongoing assessment occurs through assignment checkpoints.

Assignments
The assignments allows self-directed study leading to the solution of partly structured problems, essays and presentations. Marks will be assigned according to how completely and correctly the assignments have been addressed, and the understanding of the course material demonstrated by the report.
Assignment deadlines will be confirmed during the semester.

**Final Exam**

The exam in this course is a standard closed-book 3 hour written examination. The examination tests analytical and critical thinking and general understanding of the course material in a controlled fashion. Questions may be drawn from any aspect of the course, unless specifically indicated otherwise by the lecturer. Marks will be assigned according to the correctness of the responses. *Please note that you must pass the final exam in order to pass the course.*

# Course Resources

## Textbooks

1. Basic Nuclear Engineering
   
   **Author:** Foster and Wright
   
   **ISBN:** 978-0205078868
   
   **Publisher:** Allyn and Bacon

2. Nuclear Chemical Engineering
   
   **Author:** Benedict, Pigford, Levi
   
   **ISBN:** 978-0070045316
   
   **Publisher:** McGraw-Hill

3. Comprehensive Nuclear Materials Book
   
   **Author:** Rudy Konings
   
   **ISBN:** 978-0080560274
   
   **Year Published:** 2012

   
   **Author:** David Bodansky
   
   **ISBN:** 978-0387207780
   
   **Year Published:** 2005

## On-line resources

**Moodle**

As a part of the teaching component, Moodle will be used to disseminate teaching materials. Assessment marks will also be made available via Moodle: [https://moodle.telt.unsw.edu.au/login/index.php](https://moodle.telt.unsw.edu.au/login/index.php).

**Mailing list**

Announcements concerning course information will be given in the lectures and/or on Moodle and/or via email (which will be sent to your student email address).
Other Matters

Academic Honesty and Plagiarism
Plagiarism is the unacknowledged use of other people’s work, including the copying of assignment works and laboratory results from other students. Plagiarism is considered a form of academic misconduct, and the University has very strict rules that include some severe penalties. For UNSW policies, penalties and information to help you avoid plagiarism, see [http://www.lc.unsw.edu.au/plagiarism](http://www.lc.unsw.edu.au/plagiarism). To find out if you understand plagiarism correctly, try this short quiz: [https://student.unsw.edu.au/plagiarism-quiz](https://student.unsw.edu.au/plagiarism-quiz).

Student Responsibilities and Conduct
Students are expected to be familiar with and adhere to all UNSW policies (see [https://my.unsw.edu.au/student/atoz/ABC.html](https://my.unsw.edu.au/student/atoz/ABC.html)), and particular attention is drawn to the following:

Workload
Students need to actively manage their workload. It is typically expected that you will spend at least ten to twelve hours per week studying a 6 UoC course, from Week 1 until the final assessment, including both face-to-face classes and independent, self-directed study. In periods where you need to complete assignments or prepare for examinations, the workload may be greater. Over-commitment has been a common source of failure for many students. You should take the required workload into account when planning how to balance study with employment and other activities.

Attendance
Regular and punctual attendance at all classes is expected. UNSW regulations state that if students attend less than 80% of scheduled classes they may be refused final assessment.

General Conduct and Behaviour
Consideration and respect for the needs of your fellow students and teaching staff is an expectation. Conduct which unduly disrupts or interferes with a class is not acceptable and students may be asked to leave the class.

Work Health and Safety
UNSW policy requires each person to work safely and responsibly, in order to avoid personal injury and to protect the safety of others.

Special Consideration and Supplementary Examinations
You must submit all assignments and attend all examinations scheduled for your course. You should seek assistance early if you suffer illness or misadventure which affects your course progress. All applications for special consideration must be lodged online through myUNSW within 3 working days of the assessment, not to course or school staff. For more detail, consult [https://my.unsw.edu.au/student/atoz/SpecialConsideration.html](https://my.unsw.edu.au/student/atoz/SpecialConsideration.html).

Continual Course Improvement
This course is under constant revision in order to improve the learning outcomes for all students. Please forward any feedback (positive or negative) on the course to the course convener or via the Course and Teaching Evaluation and Improvement Process. You can also provide feedback to ELSOC who will raise your concerns at student focus group meetings. As a result of previous feedback obtained for this course and in our efforts to
provide a rich and meaningful learning experience, we have continued to evaluate and modify the content and our delivery and assessment methods.

**Administrative Matters**

On issues and procedures regarding such matters as special needs, equity and diversity, occupational health and safety, enrolment, rights, and general expectations of students, please refer to the School and UNSW policies: [http://www.engineering.unsw.edu.au/electrical-engineering/policies-and-procedures](http://www.engineering.unsw.edu.au/electrical-engineering/policies-and-procedures) [https://my.unsw.edu.au/student/atoz/ABC.html](https://my.unsw.edu.au/student/atoz/ABC.html)

**Appendix A: Targeted Graduate Capabilities**

Electrical Engineering and Telecommunications programs are designed to address the following targeted capabilities which were developed by the school in conjunction with the requirements of professional and industry bodies:

- The ability to apply knowledge of basic science and fundamental technologies;
- The skills to communicate effectively, not only with engineers but also with the wider community;
- The capability to undertake challenging analysis and design problems and find optimal solutions;
- Expertise in decomposing a problem into its constituent parts, and in defining the scope of each part;
- A working knowledge of how to locate required information and use information resources to their maximum advantage;
- Proficiency in developing and implementing project plans, investigating alternative solutions, and critically evaluating differing strategies;
- An understanding of the social, cultural and global responsibilities of the professional engineer;
- The ability to work effectively as an individual or in a team;
- An understanding of professional and ethical responsibilities;
- The ability to engage in lifelong independent and reflective learning.

**Appendix B: UNSW Graduate Capabilities**

The course delivery methods and course content directly or indirectly addresses a number of core UNSW graduate capabilities, as follows:

- Developing scholars who have a deep understanding of their discipline, through lectures and solution of analytical problems in tutorials and assessed by assignments and written examinations.
- Developing rigorous analysis, critique, and reflection, and ability to apply knowledge and skills to solving problems. These will be achieved by the interactive checkpoint assignments and exams.
- Developing capable independent and collaborative enquiry, through a series of tutorials spanning the duration of the course.
