COURSE STAFF
Course Convener: A/Prof. Elias Aboutanios Room 445 elias@unsw.edu.au
Tutor: TBA
Laboratory Contact: TBA

Consultations: The primary avenues for asking questions and seeking clarifications in this course are the Moodle Discussion Forum and the ad-hoc tutorials (which will be announced on Moodle). You are strongly encouraged to ask questions via these channels rather than via email. When necessary, you are welcome to email the Lecturer to ask questions, and all effort will be made to answer you. ALL email enquiries should be made from your student email address with ELEC9762 in the subject line, otherwise they will not be answered.

Keeping Informed: Announcements will be primarily made on Moodle and via email (to your student email address). In this course, we will use Moodle https://moodle.telt.unsw.edu.au/login/index.php. Please note that you will be deemed to have received this information, so you should take careful note of all announcements.

Contact Hours
This course primarily consists of recorded lectures and additional resources. Supporting lectures and tutorials will be given when needed. Students should expect to spend 3 hours weekly on recorded lectures and an additional 2 hours on reviewing course notes and recommended reading. Substantial support will be given on the Moodle webpage and through the discussion forum. Face-to-face tutorials will be provided on a need-basis and will be announced beforehand. An average of 3-4 hours per week is expected to be spent on the assignment.

The lectures and tutorials will be held, when necessary, during the Tuesday slot as per the information below:

<table>

Context and Aims
This course looks at the process involved in getting a mission from the proposal stage to the launch stage, including the test and evaluation processes. It will cover mission related aspects ranging from definition of the mission, through the mission specification and development to the launch and commissioning. The course aims to give students an in-depth look at the process involved in defining and undertaking a space mission. Specific aims include:

1. Describe to students the process involved in defining a space mission.
2. Give students an understanding in deriving the mission specification
3. Explain to students how to go from the mission specifications to the system functions
4. Explain to students how to go from the functions to the elementary units: (specification, production)
5. Explain to students how to formulate a system development plan
6. Explain to students how to move from the elementary units to the system: assembly, integration and test on ground
7. Give students an understanding of the issues involved in the launch campaign and in-orbit testing (IOT
Indicative Lecture Schedule
The recorded lectures are all posted on Moodle and are accessible to you. The schedule below is indicative to you so you can pace yourselves. The topics are given on a weekly basis:

COURSE DETAILS

Credits
This is a 6 UoC course and the expected workload is 15 hours per week throughout the 10 week term. The University defines a UoC as requiring 25 hours of total learning effort per semester, spread over lectures, tutorials, labs, and the student’s own study time (see https://my.unsw.edu.au/student/atoz/UnitsOfCredit.html). Therefore, it is expected that 150 hours will be allocated to this course. This equates to about 15 hours per week over the 10 weeks of the course. As this is primarily a self-study course, most of this effort should be spent by students watching the lectures, reading the recommended supporting material, and doing the assessments.

Relationship to Other Courses
The Space Mission Development course is a core specialisation course within the Master of Engineering Science (Satellite Systems Engineering) program (ELECOS8338). This course can be taken in either the first or second year of the program, although it is intended (though not required) that this be taken early in the Satellite Systems Engineering Masters program. This course is also available as a Technical Elective in Electrical Engineering Undergraduate and Masters programs.

Pre-requisites and Assumed Knowledge
There are no prerequisite courses leading into this course, however it is expected that enrolling students will have completed a 4 year Bachelor’s in Engineering and have prior undergraduate learning in Mechanics, Mathematics and Physics.

Following Courses
Although this course is not a pre-requisite for any other course, it is a core course of the ELECOS8338 program, and as such should ideally be undertaken in the first year of the program.

Learning outcomes
After successful completion of this course, you should be able to:

1. List the steps involved in undertaking a space mission
2. Explain the process involved in obtaining the mission specifications
3. Discuss the issues involved in fleshing out the system design
4. Describe the issues involved in the launch campaign
5. Describe the in-orbit testing (IOT) of the satellite.

This course is designed to provide the above learning outcomes which arise from targeted graduate capabilities listed in Appendix A. The targeted graduate capabilities broadly support the UNSW and Faculty of Engineering graduate capabilities (listed in Appendix B). This course also addresses the Engineers Australia (National Accreditation Body) Stage I competency standard as outlined in Appendix C.

Syllabus
This course examines the steps and issues involved in the development of satellite missions. Topics covered include the mission definition and specification, moving from the mission to the functions, from the functions to the elementary units, system development plan, integration and testing (from the units to the system), launch and in-orbit testing (IOT).

Specifically the topics are detailed below:

- **Defining the mission (mission specification):** Roles; Client (Need); Design/Construction (Provider); Operator (Operational provider); Dissemination (Data network); End-User; and Mission types (Telecomms,
From the mission to the functions, covering: Mission requirements (Functional, Performance, Design, Operational).

- **From the functions to the elementary units**: Specification, production; Mission planning, Using brown’s approach to scoping a mission and to estimate the costs; and Development stages and time/budget per phase.

- **Program management**: Mission phases (Prephase A – Phase E); Budgeting and cost modelling; and Time management.

- **From the elementary units to the system**: assembly, integration and test on ground platform integration; coupling; thermal vacuum test; antenna integration and alignment; solar array integration; mechanical and Radio-frequency (RF) testing; readying for flight configuration; and Launch campaign & IOT.

**TEACHING STRATEGIES**

**Delivery Mode**
The course will be delivered using a blended mode of recorded lectures and classroom interaction (on a need basis). The teaching in this course aims at establishing a good fundamental understanding of the areas covered using:

- Recorded lectures, which provide you with a focus on the core analytical material in the course, together with qualitative, alternative explanations to aid your understanding. These allow you to review the material at your own pace as many times as you need. The recorded lectures will be made available on Moodle. The video lectures will be uploaded on a week-by-week basis and accompanied by course notes, also be made available in Moodle;

- In-class Tutorials, which allow for exercises in problem solving and allow time for you to resolve problems in understanding of lecture material. Tutorials will be announced on Moodle;

- Consultation via email, which permit you to ask questions and clarify issues.

**Learning in this Course**
You are expected to be diligent in your self-study and to attend all lectures, tutorials, labs, and mid-semester exams (when applicable) in order to maximise learning. You must prepare well for your laboratory classes and your lab work will be assessed. In addition to the lecture notes/video, you should read relevant sections of the recommended text. Reading additional texts will further enhance your learning experience. Group learning is also encouraged. UNSW assumes that self-directed study of this kind is undertaken in addition to attending face-to-face classes throughout the course.

**Tutorial Classes**
You should attempt all of your problem sheet questions in advance of attending the tutorial classes. The importance of adequate preparation prior to each tutorial cannot be overemphasized, as the effectiveness and usefulness of the tutorial depends to a large extent on this preparation. Group learning is encouraged. Answers for these questions will be discussed during the tutorial class and the tutor will cover the more complex questions in the tutorial class. In addition, during the tutorial class, 1–2 new questions that are not in your notes may be provided by the tutor, for you to try in class. These questions and solutions may not be made available on the web, so it is worthwhile for you to attend your tutorial classes to gain maximum benefit from this course.
ASSESSMENT
The assessment scheme in this course reflects the intention to assess your learning progress through the semester. Ongoing assessment occurs through the lab checkpoints (see lab manual), lab exams and the mid-semester exam.

Assignments
The assignments allow self-directed study leading to the solution of partly structured problems. Marks will be assigned according to how completely and correctly the problems have been addressed, the quality of the code written for the assignment (must be attached to the report), and the understanding of the course material demonstrated by the report.

Assignment 1 report will be due at the Thursday lecture in Week 7, by 6pm on Tuesday April 2nd. The report of assignment 2 will be due by 6pm on Tuesday 7 May. Assignment submission will be through Moodle. Late reports will attract a penalty of 10% per day (including weekends).

Final Exam
The exam in this course is a standard closed-book 2 hour written examination, comprising five compulsory questions. University approved calculators are allowed. The examination tests analytical and critical thinking and general understanding of the course material in a controlled fashion. Questions may be drawn from any aspect of the course (including laboratory), unless specifically indicated otherwise by the lecturer. Marks will be assigned according to the correctness of the responses. Please note that you must pass the final exam in order to pass the course.

COURSE RESOURCES

Course Notes
Lecture notes have been prepared and will be available to students that cover the core content of the course. Additionally a detailed case study of the mission development of the Cassini/Huygens mission is also provided that will be referred to during the course. You will be told which sections of the text and/or handouts to read before each class so that you are prepared for the subject material and can ask questions about any topics that you are unsure about. You are recommended to take your own notes or annotate your own copy of the lecture notes or handouts.

Textbooks

On-line resources
Moodle
As a part of the teaching component, Moodle will be used to disseminate teaching materials, host forums and occasionally quizzes. Assessment marks will also be made available via Moodle: https://moodle.telt.unsw.edu.au/login/index.php.
Mailing list
Announcements concerning course information will be given in the lectures and/or on Moodle and/or via email (which will be sent to your student email address).

OTHER MATTERS

Dates to note
Important dates are available at: https://student.unsw.edu.au/dates

Academic Honesty and Plagiarism
Plagiarism is the unacknowledged use of other people’s work, including the copying of assignment works and laboratory results from other students. Plagiarism is considered a form of academic misconduct, and the University has very strict rules that include some severe penalties. For UNSW policies, penalties and information to help you avoid plagiarism, see: https://student.unsw.edu.au/plagiarism. To find out if you understand plagiarism correctly, try this short quiz: https://student.unsw.edu.au/plagiarism-quiz.

Student Responsibilities and Conduct
Students are expected to be familiar with and adhere to all UNSW policies (see https://student.unsw.edu.au/guide), and particular attention is drawn to the following:

Workload
It is expected that you will spend at least 15 hours per week studying a 6 UoC course, from Week 1 until the final assessment, including both face-to-face classes and independent, self-directed study. In periods where you need to complete assignments or prepare for examinations, the workload may be greater. Over-commitment has been a common source of failure for many students. You should take the required workload into account when planning how to balance study with employment and other activities.

Attendance
Regular and punctual attendance at all classes is expected. UNSW regulations state that if students attend less than 80% of scheduled classes they may be refused final assessment.

General Conduct and Behaviour
Consideration and respect for the needs of your fellow students and teaching staff is an expectation. Conduct which unduly disrupts or interferes with a class is not acceptable and students may be asked to leave the class.

Work Health and Safety
UNSW policy requires each person to work safely and responsibly, in order to avoid personal injury and to protect the safety of others.

Special Consideration and Supplementary Examinations
ou must submit all assignments and attend all examinations scheduled for your course. As of Term 1 2019, assessment of applications for Special Consideration will be managed centrally and the University has introduced a “fit to sit/submit” rule. You will no longer be required to take your original documentation to the Nucleus for verification. Instead, UNSW will conduct source checks on documentation for verification purposes. You can apply for special consideration when illness or other circumstances beyond your control interfere with an assessment performance. If you need to submit an application for special consideration for an exam or assessment, you must submit the application prior to the start of the exam or before the
assessment is submitted, except where illness or misadventure prevent you from doing so. If you sit an exam or submit an assignment, you are declaring yourself well enough to do so.

**Continual Course Improvement**

This course is under constant revision in order to improve the learning outcomes for all students. Please forward any feedback (positive or negative) on the course to the course convener or via the online student survey myExperience. You can also provide feedback to ELSOC who will raise your concerns at student focus group meetings. As a result of previous feedback obtained for this course and in our efforts to provide a rich and meaningful learning experience, we have continued to evaluate and modify our delivery and assessment methods.

**Administrative Matters**

On issues and procedures regarding such matters as special needs, equity and diversity, occupational health and safety, enrolment, rights, and general expectations of students, please refer to the School and UNSW policies: [https://www.engineering.unsw.edu.au/electrical-engineering/resources](https://www.engineering.unsw.edu.au/electrical-engineering/resources)
APPENDICES

Appendix A: Targeted Graduate Capabilities
Electrical Engineering and Telecommunications programs are designed to address the following targeted capabilities which were developed by the school in conjunction with the requirements of professional and industry bodies:

- The ability to apply knowledge of basic science and fundamental technologies;
- The skills to communicate effectively, not only with engineers but also with the wider community;
- The capability to undertake challenging analysis and design problems and find optimal solutions;
- Expertise in decomposing a problem into its constituent parts, and in defining the scope of each part;
- A working knowledge of how to locate required information and use information resources to their maximum advantage;
- Proficiency in developing and implementing project plans, investigating alternative solutions, and critically evaluating differing strategies;
- An understanding of the social, cultural and global responsibilities of the professional engineer;
- The ability to work effectively as an individual or in a team;
- An understanding of professional and ethical responsibilities;
- The ability to engage in lifelong independent and reflective learning.

Appendix B: UNSW Graduate Capabilities
The course delivery methods and course content directly or indirectly addresses a number of core UNSW graduate capabilities, as follows:

- Developing scholars who have a deep understanding of their discipline, through lectures and solution of analytical problems in tutorials and assessed by assignments and written examinations.
- Developing rigorous analysis, critique, and reflection, and ability to apply knowledge and skills to solving problems. These will be achieved by the laboratory experiments and interactive checkpoint assessments and lab exams during the labs.
- Developing capable independent and collaborative enquiry, through a series of tutorials spanning the duration of the course.
- Developing digital and information literacy and lifelong learning skills through assignment work.
- Developing ethical practitioners who are collaborative and effective team workers, through group activities, seminars and tutorials.
- Developing independent, self-directed professionals who are enterprising, innovative, creative and responsive to change, through challenging design and project tasks.
- Developing citizens who can apply their discipline in other contexts, are culturally aware and environmentally responsible, through interdisciplinary tasks, seminars and group activities.
