COURSE STAFF

Course convener: Prof François Ladouceur, EE&T 342, f.ladouceur@unsw.edu.au
Course lecturer: Prof François Ladouceur, EE&T 342, f.ladouceur@unsw.edu.au

Consultations: Lecturer consultation times will be advised during the first lecture. ALL email enquiries should be made from your student email address with ELEC4445 or GSOE9445 in the subject line; otherwise they will not be answered.

Keeping Informed: Announcements may be made during classes, via email (to your student email address) and/or via online learning and teaching platforms – in this course, we will use a combination of Moodle and Microsoft Teams. Please note that you will be deemed to have received this information, so you should take careful note of all announcements.

COURSE SUMMARY

Contact Hours
The course consists of 2 hours of lectures per week, and 2 hours of tutorial sessions or guest interviews / lectures taking place on:

<td>12:00–14:00 On-line via MS Teams</td>
</tr>
</tbody>
</table>

Context and Aims
This course was developed by the School of Electrical Engineering and Telecommunications to provide an introduction to business creation and its associated entrepreneurial process. It is intended mainly for 4th year EE&T students but is open to all engineering students. The course assumes no specific business knowledge and focuses on the creation of high-tech ventures related to engineering.

**Assessment**

- **Weekly review quizzes**: 16% (8 × 2%)
- **Assignments**: 44%
- **Final Exam (2 hours)**: 40%

**Weekly Review Quizzes (16%)**: These *10 minutes on-line evaluations* will be held weekly at the beginning of each lecture and will cover the activity of the preceding week including material from the lectures, guest interviews and tutorials. Each quiz will count for 2% and take place weekly starting on week 2, except for week 6 (study week). These quizzes test your general understanding of the course material and are designed to give you feedback on your progress. Marks will be assigned according to the correctness of the responses.

**Final Examination (40%)**: 2 hour open-book exam covering lectures, tutorials and guest presentations. University approved calculators are allowed. The examination tests analytical and critical thinking and general understanding of the course material in a controlled fashion. Questions may be drawn from any aspect of the course. Marks will be assigned according to the correctness of the responses.

**Assignments**: 3 assignments to be done in groups of three to four people. Assignment 1 (10%) consists in conducting an interview with an entrepreneur (due date: week 4). Assignment 2 (14%) is in the form of an essay on a chosen high-tech business issue that links to the concepts viewed in class (due date: week 7). Assignment 3 (20%) consists in developing a disruption analysis based on new technologies or business models (due date: week 10). Marks will be assigned according to how completely and correctly the problems have been addressed, the quality of the written material, and the understanding of the course material demonstrated. **Late reports will attract a penalty of 10% per day (including weekends).**

**Important Health Related Notice**

Your health and the health of those in your class is critically important. You must stay at home if you are sick or have been advised to self-isolate by NSW health or government authorities. Current alerts and a list of hotspots can be found [here](#). **You will not be penalised for missing a face-to-face activity due to illness or a requirement to self-isolate.** We will work with you to ensure continuity of learning during your isolation and have plans in place for you to catch up on any content or learning activities you may miss. Where this might not be possible, an application for fee remission may be discussed.

If you are required to self-isolate and/or need emotional or financial support, please contact the Nucleus: Student Hub. If you are unable to complete an assessment, or attend a class with an attendance or participation requirement, please let your teacher know and apply for special consideration through the Special Consideration portal. To advise the University of a positive COVID-19 test result or if you suspect you have COVID-19 and are being tested, please fill in this [form](#).

UNSW requires all staff and students to follow NSW Health advice. Any failure to act in accordance with that advice may amount to a breach of the Student Code of Conduct. Please refer to the [Safe Return to Campus](#) guide for students for more information on safe practices.
**COURSE DETAILS**

**Credits**
This is a 6 UoC course and the expected workload is 15 hours per week throughout the 10-week term.

**Relationship to Other Courses**
Perhaps the most relevant related course is the 4th year thesis project as it can be used as the basis for the development of a hypothetical business plan during the course of the trimester.

**Pre-requisites and Assumed Knowledge**
Although the course has no specific prerequisites, it is assumed that the students are familiar with the basic mathematics required for corporate finance (basic calculus).

**Following Courses**
The course is no a prerequisite for any specific course.

**Learning outcomes**
After successfully completing this course, students will be expected to:

1. Explain what is involved in starting up a high-tech business in an Australian context, the involved risks and the potential rewards;
2. Explain the role of entrepreneurship in today's society;
3. Explain the entrepreneurial process i.e. the analysis, control and exploitation of business opportunities and available resources;
4. Explain to role of IP and the various mechanism securing its exclusive usage;
5. Explain the various mechanisms for raising capital;
6. Explain the roles of engineers in an entrepreneurial context;
7. Explain alternative career possibilities offered in the context of entrepreneurship and commercialisation of intellectual property.

This course is designed to provide the above learning outcomes which arise from targeted graduate capabilities listed in **Appendix A**. The targeted graduate capabilities broadly support the UNSW and Faculty of Engineering graduate capabilities (listed in **Appendix B**). This course also addresses the Engineers Australia (National Accreditation Body) Stage I competency standard as outlined in **Appendix C**.

**Syllabus**
Course introduction: the entrepreneurial revolution; the entrepreneurial process; opportunities recognizing and screening; entrepreneur and the internet; entrepreneur; obtaining venture and growth capital; resource requirements; disruption; entrepreneurial finance; rapid growth and troubled times; harvesting the wealth.

**TEACHING STRATEGIES**

**Delivery Mode:** The course consists of the following elements: lectures, tutorials and guest lectures:

**Lectures:** The lectures will introduce the basic concepts of entrepreneurial engineering.

**Tutorials:** The tutorials will cover the more technical aspects of the course, namely corporate finance at an introductory level. They will also serve as guiding sessions for the development of the assignments.

**Guest interview/lectures:** They will provide the student with insights into the entrepreneurial process from industry participants ranging from Venture Capitalist, past- and current-entrepreneurs, young graduates involves in start-ups, CTOs of technology related companies, etc.
Learning in this course

You are expected to attend all lectures, guest lectures, and tutorials in order to maximise learning. In addition to the lecture notes/video, you should read relevant sections of the recommended text. Reading additional texts will further enhance your learning experience. Group learning is also encouraged. UNSW assumes that self-directed study of this kind is undertaken in addition to attending face-to-face classes throughout the course.

Tutorial classes

You should attempt all of your problem sheet questions in advance of attending the tutorial classes. The importance of adequate preparation prior to each tutorial cannot be overemphasised, as the effectiveness and usefulness of the tutorial depends to a large extent on this preparation. Group learning is encouraged. Answers for these questions will be discussed during the tutorial class and the tutor will cover the more complex questions in the tutorial class. In addition, during the tutorial class, 1–2 new questions that are not in your notes may be provided by the tutor, for you to try in class.

ASSESSMENT

Assessment is based three assignments, 8 weekly review quizzes and one final examination.

Weekly Review Quizzes (16%): These 10 minutes on-line evaluations will be held weekly at the beginning of each lecture and will cover the activity of the preceding week including material from the lectures, guest interviews and tutorials. Each quiz will count for 2% and take place weekly starting on week 2, except for week 6 (study week). These quizzes test your general understanding of the course material and are designed to give you feedback on your progress. Marks will be assigned according to the correctness of the responses.

Final Examination (40%): 2 hour open-book exam covering lectures, tutorials and guest presentations. University approved calculators are allowed. The examination tests analytical and critical thinking and general understanding of the course material in a controlled fashion. Questions may be drawn from any aspect of the course. Marks will be assigned according to the correctness of the responses.

Assignments: 3 assignments to be done in groups of three to four people. Assignment 1 (10%) consists in conducting an interview with an entrepreneur (due date: week 4). Assignment 2 (14%) is in the form of an assay on a chosen high-tech business issue that links to the concepts view in class (due date: week 7). Assignment 3 (20%) consists in developing a disruption analysis based on new technologies or business models (due date: week 10). Marks will be assigned according to how completely and correctly the problems have been addressed, the quality of the written material, and the understanding of the course material demonstrated. Late reports will attract a penalty of 10% per day (including weekends).

ELEC4445/GSOE9445 – Term 2, 2021 – Course Outline
Page 4
COURSE RESOURCES

Textbooks
Extensive lecture notes covering both the standard lectures and guest lecturers’ material will be distributed in class and also made available online through Blackboard 9. Nevertheless the following reference material is recommended:

On-line resources

Microsoft Teams
Microsoft Teams will be the main interactive platform used throughout the trimesters. It will serve for live on-line delivery of all content and will host all support materials, including lectures notes, assignments, samples of past examinations and assignments, etc. Furthermore, Teams will be used to disseminate course information as the trimester progresses and will host discussion forums. Lastly, assessment marks will also be made available via Teams.

Moodle
Moodle might be used as a complementation support platform when Microsoft Teams lacks in functionality.

OTHER MATTERS

Dates to note
Important Dates available at: https://student.unsw.edu.au/dates

Academic Honesty and Plagiarism
Plagiarism is the unacknowledged use of other people’s work, including the copying of assignment works and laboratory results from other students. Plagiarism is considered a form of academic misconduct, and the University has very strict rules that include some severe penalties. For UNSW policies, penalties and information to help you avoid plagiarism, see https://student.unsw.edu.au/plagiarism. To find out if you understand plagiarism correctly, try this short quiz: https://student.unsw.edu.au/plagiarism-quiz.

Student Responsibilities and Conduct
Students are expected to be familiar with and adhere to all UNSW policies (see https://student.unsw.edu.au/guide), and particular attention is drawn to the following:

Workload
It is expected that you will spend at least 15 hours per week studying a 6 UoC course, from Week 1 until the final assessment, including both face-to-face classes and independent, self-directed study. In periods where you need to complete assignments or prepare for examinations, the workload may be greater. Over-commitment has been a common source of failure for many students. You should take the required workload into account when planning how to balance study with employment and other activities.

Attendance
Regular and punctual attendance at all classes is expected. UNSW regulations state that if students attend less than 80% of scheduled classes they may be refused final assessment.

General Conduct and Behaviour
Consideration and respect for the needs of your fellow students and teaching staff is an expectation. Conduct which unduly disrupts or interferes with a class is not acceptable and students may be asked to leave the class.
Work Health and Safety
UNSW policy requires each person to work safely and responsibly, in order to avoid personal injury and to protect the safety of others.

Special Consideration and Supplementary Examinations
You must submit all assignments and attend all examinations scheduled for your course. You can apply for special consideration when illness or other circumstances beyond your control interfere with an assessment performance. If you need to submit an application for special consideration for an exam or assessment, you must submit the application prior to the start of the exam or before the assessment is submitted, except where illness or misadventure prevent you from doing so. Be aware of the “fit to sit/submit” rule which means that if you sit an exam or submit an assignment, you are declaring yourself well enough to do so and cannot later apply for Special Consideration. For more information and how to apply, see https://student.unsw.edu.au/special-consideration.

Continual Course Improvement
This course is under constant revision in order to improve the learning outcomes for all students. Please forward any feedback (positive or negative) on the course to the course convener or via the online student survey myExperience. You can also provide feedback to ELSOC who will raise your concerns at student focus group meetings. As a result of previous feedback obtained for this course and in our efforts to provide a rich and meaningful learning experience, we have continued to evaluate and modify our delivery and assessment methods.

Administrative Matters
On issues and procedures regarding such matters as special needs, equity and diversity, occupational health and safety, enrolment, rights, and general expectations of students, please refer to the School and UNSW policies: https://student.unsw.edu.au/guide https://www.engineering.unsw.edu.au/electrical-engineering/resources

APPENDICES

Appendix A: Targeted Graduate Capabilities
Electrical Engineering and Telecommunications programs are designed to address the following targeted capabilities which were developed by the school in conjunction with the requirements of professional and industry bodies:

- The ability to apply knowledge of basic science and fundamental technologies;
- The skills to communicate effectively, not only with engineers but also with the wider community;
- The capability to undertake challenging analysis and design problems and find optimal solutions;
- Expertise in decomposing a problem into its constituent parts, and in defining the scope of each part;
- A working knowledge of how to locate required information and use information resources to their maximum advantage;
- Proficiency in developing and implementing project plans, investigating alternative solutions, and critically evaluating differing strategies;
- An understanding of the social, cultural and global responsibilities of the professional engineer;
- The ability to work effectively as an individual or in a team;
- An understanding of professional and ethical responsibilities;
- The ability to engage in lifelong independent and reflective learning.

Appendix B: UNSW Graduate Capabilities
The course delivery methods and course content directly or indirectly addresses a number of core UNSW graduate capabilities, as follows:
• Developing scholars who have a deep understanding of their discipline, through lectures and solution of analytical problems in tutorials and assessed by assignments and written examinations.
• Developing rigorous analysis, critique, and reflection, and ability to apply knowledge and skills to solving problems. These will be achieved by the laboratory experiments and interactive checkpoint assessments and lab exams during the labs.
• Developing capable independent and collaborative enquiry, through a series of tutorials spanning the duration of the course.
• Developing ethical practitioners who are collaborative and effective team workers, through group activities, seminars and tutorials.
• Developing independent, self-directed professionals who are enterprising, innovative, creative and responsive to change, through challenging design and project tasks.
• Developing citizens who can apply their discipline in other contexts, are culturally aware and environmentally responsible, through interdisciplinary tasks, seminars and group activities.
