UNSW AUSTRALIA

Course Outline

Semester 2 2015

Never Stand Still | Engineering | Mechanical and Manufacturing Engineering

MTRN4010

ADVANCED AUTONOMOUS SYSTEMS

Contents

1. Staff Contact Details

Contact details and consultation times for course convenor

Name: Dr Jose Guivant
Office: ME311B, J17
Tel: (02) 9385 4096
Email: J.Guivant@unsw.edu.au

Consultation Times: To be agreed with students.

2. Course details

Credit Points:

This is a 6 unit-of-credit (UoC) course, and involves five hours per week (h/w) of face-to-face contact.

The UNSW website states “The normal workload expectations of a student are approximately 25 hours per semester for each UoC, including class contact hours, other learning activities, preparation and time spent on all assessable work. Thus, for a full-time enrolled student, the normal workload, averaged across the 16 weeks of teaching, study and examination periods, is about 37.5 hours per week.”

This means that you should aim to spend about 9 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

Contact Hours

Lecture	**Day**	**Time**	**Location**
	Tuesday	10:00 – 12:00	Old Main Building 145
Projects/ Lab	Tuesday	13:00 – 16:00	MTRN212-J18
	Wednesday	09:00 – 12:00	MTRN212-J18

Summary of the Course

The course is aimed at learning basic and advanced techniques necessary for the sensing and control of autonomous systems. Contents covered in this course are the theory and application of topics such as Stochastic Processes, Bayesian State Estimation (including Kalman Filter), Sensor Data Fusion, Fuzzy Logic, Particle Swarm Optimization (PSO), Genetic Algorithms.

Half of the course is lecture-based. In the other half the students apply the concepts on real data and a real platform (UGV -Unmanned Ground Vehicle).

Aims of the Course

The following are the course objectives:

- Understanding of the problem of Modelling and Estimation of Stochastic Dynamical Processes, in particular for Robot Perception and Localization.
- Understand the Implementation of stochastic Sensor Data Fusion for solving Engineering Problems.
- Understanding the theory of advanced techniques such as Fuzzy Logic, PSO and Genetic Algorithms.
- Be able to implement simulations and real systems for the control and estimation of processes such as a mobile robotic platform.
- Enable students to work to improve problem-solving skills.

Concepts included in this course are useful for other disciplines, in research, development and industrial application.

Student learning outcomes

This course is designed to address the below learning outcomes and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

Learning Outcome		**EA Stage 1 Competencies**
1.	Understanding of the general theory of Bayesian Estimation. Understanding of the theory and application of the Kalman Filter (KF and EKF) for solving diverse problems in the area of Engineering	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals
2.	Understanding of methods such as GA, Fuzzy Logic and PSO.	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals
3.	Be able to develop software for applying the theory and actually solving complex problem. Get experience in using state of the art sensors, used in Field Robotics and Autonomous Systems	PE2.3 Application of systematic engineering synthesis and design processes

3. Teaching strategies

Teaching of this course is through lectures and laboratory sessions. All laboratory work is individual work and attendance is preferred.

The provision of the learning environment in the laboratory is to facilitate you to develop confidence in managing laboratory tasks as projects. Demonstrators in the laboratories are there to provide you all the guidance and assistance is managing the laboratory tasks.

Example source code for the projects is provided, in order to help in the understanding and full implementation of the projects.

Projects complexity is incremental, in order to allow the student to finally complete the solution of a complex problem.

4. Course schedule

Topic	**Date**	**Location**	**Lecture Content**	**Lab**	**Suggested Readings**
Introduction / refreshing concepts	week 1	LR	Refreshing concepts: Statistics (Random variables, probability density functions), state space representation, matrix/vector operations and Matlab programming language	No	Moodle lecture notes
Typical Sensors and Models	week 2	LR	Sensors used in the projects: Inertial Measurement Unit (IMU). Laser Scanner. Other usual sensors used in Mobile Robotics. Process Models for mobile platforms	No	Moodle lecture notes
Estimation 1	week 3	LR	Study of Bayesian Estimation, Sensor Data Fusion.	No	Moodle lecture notes
Estimation 2	week 4	LR	(Continuation of previous topic)	No	Moodle lecture notes
Estimation 3	week 5	LR	Gaussian Estimators: Kalman Filter and Extended Kalman Filter (EKF)	No	Moodle lecture notes
Estimation 4	Week 6	LR	Examples using EKF for estimation (not just for Robotics).	No	Moodle lecture notes
Localization 1	week 7	LR	Applying EKF in Robotics: Solving the localization of the UGV	No	Moodle lecture notes

Localization 2	week 8	LR	Alternative approach: Applying an optimizer for solving the localization problem	No	Moodle lecture notes
Special Topic	week 9	LR	Case of Study: SLAM (Simultaneous Localization and Mapping)	No	Moodle lecture notes
PSO	week 10	LR	Introduction to PSO (Particle Swarm Optimization)	No	Moodle lecture notes
Genetic Algorithms	week 11	LR	Introduction to Genetic Algorithms	No	Moodle lecture notes
Fuzzy Logic	week 12	LR	Introduction to Fuzzy Logic	No	Moodle lecture notes
Revision	week 13	LR	Revision and discussion	No	Moodle lecture notes

(note: LR = lecture Room = Old Main Building 145)

5. Assessment

Assessment task	**Length**	**Weight**	**Learning outcomes assessed**	**Assessment criteria**	**Due date, time, and submission requirements**
Projects	4 projects	50%	1,3	Refer to assignments specifications for exact details.	See details in the section about Projects
Final exam	2 hours	50%	1,2,3	All course content from weeks 1-12	Exam period, date TBC

Necessary conditions in order to pass the course:
a) The exam mark must be 50/100 or higher.
b) The project component total mark must be 50/100 or higher.

Projects

Assessment task	**Length**	**Weight (of Project component)**	**Learning outcomes assessed**	**Assessment criteria**	**Due date, time, and submission requirements**
Task 0	Problems	0%	(refreshing concepts and skills)	NO	No assessment.
Task 1	Completely operational software	12%	3	Refer to assignment specification for exact details.	Meeting with a demonstrator during week 5.

Task 2	Completely operational software	6%	3	Refer to assignment specification for exact details.	Meeting with a demonstrator during week 7.
Project 1	Completely operational software	40%	1,3	Refer to assignment specification for exact details	Meeting with a demonstrator during week 10.
Project 2	Completely operational software	42%	1,3	Refer to assignment specification for exact details.	Meeting with a demonstrator during week 12.

Assignments

Presentation

All programs must be explained fully to your demonstrator. A significant portion of the marks are for your knowledge demonstration during your meeting with the demonstrator. A short quiz before the demonstration may be required by the demonstrators.

At the end of the demonstrations, you must submit all your software and report (if required) in a zipped file form via a Moodle submission site, before midnight of the Friday of the week the assignment is assessed. Details about the format and name convention for programs files and reports will be explained in the release of the tasks and projects.

Submission

Late demonstrations and submissions will be penalised 5 marks per calendar day (including weekends). An extension may only be granted in exceptional circumstances. Where an assessment task is worth less than 20% of the total course mark and you have a compelling reason for being unable to submit your work on time, you must seek approval for an extension from the course convener ***before the due date***. Special consideration for assessment tasks of 20% or greater must be processed through https://student.unsw.edu.au/special-consideration.

It is always worth submitting late assessment tasks when possible. Completion of the work, even late, may be taken into account in cases of special consideration.

Examinations

You must be available for all tests and examinations. Final examinations for each course are held during the University examination periods, which are June for Semester 1 and November for Semester 2.

Provisional Examination timetables are generally published on myUNSW in May for Semester 1 and September for Semester 2

For further information on exams, please see Administrative Matters.

Calculators

You will need to provide your own calculator, of a make and model approved by UNSW, for the examinations. The list of approved calculators is shown at https://student.unsw.edu.au/exam-approved-calculators-and-computers

It is your responsibility to ensure that your calculator is of an approved make and model, and to obtain an "Approved" sticker for it from the School Office or the Engineering Student Centre prior to the examination. Calculators not bearing an "Approved" sticker will not be allowed into the examination room.

Special Consideration and Supplementary Assessment

For details of applying for special consideration and conditions for the award of supplementary assessment, see Administrative Matters, available on the School website and on Moodle, and the information on UNSW's Special Consideration page.

6. Expected Resources for students

All the academic material is provided by the lecturer (Lecture notes, example data, software libraries, example code, sensors and equipment)

7. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the Course and Teaching Evaluation and Improvement (CATEI) process, informal discussion in the final class for the course, Moodle's forums and the School's Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

The practical component of the course has been adapted to providing skills and experience in line with the state of the art of the related area of Engineering.

8. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. *Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.*

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism: https://student.unsw.edu.au/plagiarism The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student's work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here: http://www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf

Further information on School policy and procedures in the event of plagiarism is presented in a School handout, Administrative Matters, available on the School website.

9. Administrative Matters

You are expected to have read and be familiar with *Administrative Matters*, available on the School website: www.engineering.unsw.edu.au/mechanical-engineering/sites/mech/files/u41/S2-2015-Administrative-Matters_20150721.pdf

This document contains important information on student responsibilities and support, including special consideration, assessment, health and safety, and student equity and diversity.

Jose Guivant
20 July 2015

Appendix A: Engineers Australia (EA) Professional Engineer Competency Standards

	Program Intended Learning Outcomes
PE1: Knowledge and Skill Base	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals
	PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing
	PE1.3 In-depth understanding of specialist bodies of knowledge
	PE1.4 Discernment of knowledge development and research directions
	PE1.5 Knowledge of engineering design practice
	PE1.6 Understanding of scope, principles, norms, accountabilities of sustainable engineering practice
PE2: Engineering Application Ability	PE2.1 Application of established engineering methods to complex problem solving
	PE2.2 Fluent application of engineering techniques, tools and resources
	PE2.3 Application of systematic engineering synthesis and design processes
	PE2.4 Application of systematic approaches to the conduct and management of engineering projects
PE3: Professional and Personal Attributes	PE3.1 Ethical conduct and professional accountability
	PE3.2 Effective oral and written communication (professional and lay domains)
	PE3.3 Creative, innovative and pro-active demeanour
	PE3.4 Professional use and management of information
	PE3.5 Orderly management of self, and professional conduct
	PE3.6 Effective team membership and team leadership
