prepared by G Prusty/ D Lyons, July 2016

1. Staff contact details

Contact details and consultation times for course convenor

Professor Gangadhara Prusty
Ainsworth Mechanical Engineering Building (G17), Room 208F
Tel: (02) 9385 5939
Email: g.prusty@unsw.edu.au

Contact details and consultation times for additional lecturers/demonstrators/lab staff

Mr. David Lyons
Ainsworth Mechanical Engineering Building (G17), Room 208D
Tel: (02) 9385 6120
Email: david.lyons@unsw.edu.au

Contact details for other demonstrators will be available on Moodle.

Consultation

Consultation concerning this course is available during the lectures and problem solving sessions. Outside of these hours the convenor and demonstrators can be contacted through the Moodle platform; either via a forum or through direct messaging. Any questions about course content and assessment that are not of a private nature should be directed to the appropriate Moodle forum. Any personal queries about course administration can be directed to the course convenor via direct email or Moodle direct message

2. Course details

Credit Points

This is a HYBRID course offered to final year undergraduate and postgraduate students. This is a 6 unit-of-credit (UoC) course, and involves 3 or 4 hours per week (h/w) of face-to-face contact.

The UNSW website states “The normal workload expectations of a student are approximately 25 hours per semester for each UoC, including class contact hours, other learning activities, preparation and time spent on all assessable work. Thus, for a full-time enrolled student, the normal workload, averaged across the 16 weeks of teaching, study and examination periods, is about 37.5 hours per week.”

This means that you should aim to spend about 9 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

Contact hours

	Day	Time	Location
Lectures (Weeks 1-12)	Monday	12noon - 2pm	Civil Engineering 101
Problem Solving Sessions / Laboratory (Weeks 2-13)	Monday	2pm – 4pm	Quadrangle 1047 / Solid Lab
	Monday	4pm – 6pm	Quadrangle 1047 / Solid Lab

Lectures commence in week 1 and run until week 12. Problem Solving Sessions / Laboratory commence in week 2 and run until week 13.

Summary of the course

- (a) Composite material constituents and their properties
 - (b) Manufacturing methods and processes
 - (c) Micromechanical analysis of composite strength and stiffness:
 - Assumptions and limitations
 - Longitudinal strength and stiffness
 - In-plane shear modulus and poisson's ratio
 - (d) Elastic properties of the unidirectional lamina:
 - Engineering constants
 - Stress-strain relationship of a thin lamina
 - Transformation of stress and strain and elastic constants
 - Typical elastic properties of a unidirectional lamina
 - (e) Analysis of laminated composites
 - Basic assumptions
 - Strain-displacement relationship
 - Laminate stiffness
 - Determination of lamina stress and strain
 - Types of laminate configuration
 - (f) Failure theories and strength of unidirectional lamina:
 - Micro-mechanics of failure of unidirectional lamina
 - Failure theories
 - Importance of shear stress
 - Choice of failure criteria
 - Typical strength properties
 - (g) Design of components:
 - International standards for tests and certification
 - (h) Finite element modelling and analysis of composite panels
 - (i) Structural health monitoring and non-destructive testing methods
- * Topics during the weekly teaching format might be varied or changed

Aims of the course

On successful completion of this course, students should be able to; (a) Understand the use of fibre-reinforced composites in structural applications and (b) Develop a basic understanding of the use of composite materials, micromechanics of layered composites, analysis and design of composite structures and failure analysis of laminated panels.

How this course is related to other courses and relevant program(s)

Composite Materials and Mechanics takes the themes of the fundamentals of material science and engineering and applies them in an engineering context.

The objective of this course is to develop a solid understanding of the properties of composite materials, micromechanics and lamination theory, together with the analysis and manufacture of lightweight composite structures in a unified and integrated manner for an undergraduate/graduate student. These are fundamental to mechanical, civil and material science engineering and related programs such as mechatronic engineering, naval architecture, aerospace engineering and biomedical engineering as well as manufacturing and industrial design.

Student learning outcomes

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

Learning Outcome		EA Stage 1 Competencies
1.	Recognise the fundamentals of orthotropic materials and mechanics of materials	1.1, 1.3, 1.6
2.	Demonstrate the fundamentals of directional stresses and strains	1.1, 1.3, 1.6
3.	Develop a solid understanding in the properties of composite materials	1.3, 1.5, 2.1
4.	Develop an understanding of micromechanics and lamination theory together with the analysis and manufacture of lightweight composite structures in a unified and integrated manner	2.1, 2.2, 2.3
5.	Learn how to design a composite structure and be able to test and confirm its mechanical properties	2.2, 2.3, 2.4

3. Teaching strategies

Component	Activities
Lectures	<ul style="list-style-type: none"> • Find out what you must learn. • See methods that are not in the textbook. • Follow worked examples. • Hear announcements on course changes.
Laboratory/Problem solving class	<ul style="list-style-type: none"> • Be guided by course notes and demonstrators. • Ask questions. • Do problems, as set out in the course notes. • Work with colleagues.
Private study (including Moodle)	<ul style="list-style-type: none"> • Review lecture material and textbook. • Do set problems and assignments. • Discuss with fellow students. • Join Moodle discussions of problems. • Download materials from Moodle. • Keep up with notices and find out marks via Moodle.
Assessments (assignments, laboratories and final exam)	<ul style="list-style-type: none"> • Demonstrate your basic knowledge and skills. • Learn from feedback. • Demonstrate higher understanding and problem solving.

4. Course schedule

Composites 3M: Materials, Mechanics and Manufacturing		
Wk	Lecture (2 hr) – Mon 12:00-14:00	Problem Solving Class/Laboratory (2 hr) – Mon 14:00-16:00 or 16:00-18:00 (as allocated to you)
1	Introduction to Composite Materials	
2	Processing of fibre reinforced composites (DL)	-Lab tour -WHS/RM forms organized
3	Processing of fibre reinforced composites (DL)	-Explanation of materials and demonstration of equipment. <i>Assignment 1 issued-a review document on composite materials-applications, relevant to your degree program. Submission due in Wk 5, to be peer reviewed! (15%)</i>
4	Composite Strength and Stiffness	- Sample problem solving class
5	Micro-mechanical Analysis, Elastic properties of uni-directional lamina	- Sample problem solving class
6	Laminated Composites	- Sample problem solving class

7	Analysis of laminated composites and composite beams	- Sample problem solving class <i>Assignment 2 issued- report on the materials, manufacturing method, experimental interpretation and validation using finite element software. Submission due in Wk 9 (20%)</i>
8	Failure Theories	- Large sample manufacture- Make, bake and break /discussion (Wk 8-12) <i>Assignment 3 issued- report on the large test article manufactured and tested. Submission due in Wk 13 (20%)</i>
9	(a)Strength of UD lamina (b)First-ply and Ultimate failure	- Large sample manufacture and test
10	Design of laminates (DL)	- Large sample manufacture and test
11	Structural Health Monitoring and NDT methods	- Large sample manufacture and test
12	Standards, and Codes	- Large sample manufacture and test

5. Assessment

Assessment overview

Task	Mark	Learning outcomes assessed	Assessment criteria	Due date	Marks returned
Assignment 1	15%	1, 2, 3	Understanding of industry specific applications of composites and critical views on the published literature	5 pm Monday in week 5 (22th August)	Two weeks after the submission day
Assignment 2	20%	1, 2, 5	Use of experiment and Simulation technology for composites. Report writing, communication skills and understanding of experimental procedures	5 pm Friday in week 9 (19th September)	Two weeks after the submission day
Assignment 3	20%	1, 4, 5	Hands-on sample manufacture, experiments, report writing and communication skills	5 pm Friday in week 13 (28th October)	Two weeks after the submission day
Final exam	45%	1, 2, 4	Understanding of all course content	Exam period, date TBA.	Upon release of final results
Total	100%				

Reasons

We need to find out how well you have:

- grasped the fundamentals of micro-mechanics of composites.
- become proficient in developing your understanding for engineering applications.
- become proficient in calculation layout and development.
- developed correct, professional technique.
- become proficient in using composite materials fundamentals to solve practical problems and apply.
- come to see the world through “engineers’ eyes”
- prepared yourself for your future career.

Scheme

The final grade in MECH9420 will be based on the sum of the scores from each of the assessment components.

- Final grades may be adjusted by scaling with the approval of the appropriate departmental meeting.
- A pass in this course requires a mark of 50% in assessments and final examination.

All submissions should have a standard School cover sheet:

https://eng-intranet.unsw.edu.au/mech-engineering/policies_forms/SiteAssets/MME%20Individual%20Assignment%20Cover%20Sheet.pdf. All submissions are expected to be neat and clearly set out. All calculations should be shown. In the event of incorrect answers, marks are awarded for method and understanding.

All assignments should be submitted via Moodle.

Late submissions attract a penalty of ten percent per day, unless prior dispensation has been given. You must consult the lecturer before the due date to avoid penalty. It is always worth submitting as, in the event of difficulty making the final grade, any late penalties may be removed.

Assessment Criteria

Assignment/ Laboratory Reports:

- Interpretation of the experimental results for the required information described in the hand out for each experiment.
- Understanding the relationship between the theory covered during the lectures and experimental results in the laboratory.
- Presentation of the report in accordance with the MECHENG guidelines.
- Attendance and participation during the laboratory experiments.

Final examination:

- Use the basic concepts of micro- and macro-mechanics of structures.

- Systematic approach to outline the steps for a problem and use the necessary fundamental concepts covered in the lectures and problem solving classes.
- Correctness of the solution with the aid of necessary diagrams/sketches and the use of appropriate units.

Presentation requirements

All submissions should have a standard School cover sheet which is available at https://eng-intranet.unsw.edu.au/mech-engineering/policies_forms/SiteAssets/MME%20Individual%20Assignment%20Cover%20Sheet.pdf and this subject's Moodle page. All submissions are expected to be neat and clearly set out. All calculations should be shown as, in the event of incorrect answers, marks are awarded for method and understanding. Further details of individual assessment tasks will be provided on Moodle, including submission procedures and the criteria by which grades will be assigned.

The preferred set-out of any numerical calculation is similar to the following:

$$\begin{aligned}
 A_{\text{bow}} &= 0.0035AmfV && \text{(Equation in symbols)} \\
 &= 0.0035 \times 480 \times 0.95 \times 1.0 \times 18.00 && \text{(Numbers substituted)} \\
 &= 28.7 \text{ m}^2 && \text{(Answer with units)}
 \end{aligned}$$

Special consideration and supplementary assessment

For details of applying for special consideration and conditions for the award of supplementary assessment, see the School [intranet](#), and the information on UNSW's [Special Consideration page](#).

6. Expected resources for students

Reference Texts

1. Isaac M. Daniel and Ori Ishai, Engineering Mechanics of Composite Materials, Oxford University Press, 1994.
2. Mel M. Schwartz, Composite Materials, Vol 2, Prentice Hall, New Jersey, 1997.
3. R. A. Shenoi and J. F. Wellicome, Composite Materials in Maritime Structures, Vol 1&2, Cambridge University Press, U.K., 1993.

Moodle site for MECH 9420. Access via <https://moodle.telt.unsw.edu.au/login>

Library (e.g. <http://info.library.unsw.edu.au/web/services/services.html>).

School's website <http://www.engineering.unsw.edu.au/mechanical-engineering/>

7. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the Course and Teaching Evaluation and Improvement (CATEI) process, informal discussion in the final class for the course, and the School's Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

Feedback from a previous instance of the course suggested that a large number of small assessment tasks was conducive to continued online learning and this has been maintained. Prior to that, improvements included moving to a single platform for online content delivery and assessment.

8. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. *Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.*

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism: student.unsw.edu.au/plagiarism The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student's work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here:

www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf

Further information on School policy and procedures in the event of plagiarism is available on the [intranet](#).

9. Administrative matters

All students are expected to read and be familiar with School guidelines and policies, available on the intranet. In particular, students should be familiar with the following:

- [Attendance, Participation and Class Etiquette](#)
- [UNSW Email Address](#)
- [Computing Facilities](#)
- [Assessment Matters](#) (including guidelines for assignments, exams and special consideration)
- [Academic Honesty and Plagiarism](#)
- [Student Equity and Disabilities Unit](#)
- [Health and Safety](#)
- [Student Support Services](#)

Appendix A: Engineers Australia (EA) Stage 1 Competencies for Professional Engineers

	Program Intended Learning Outcomes
PE1: Knowledge and Skill Base	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals
	PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing
	PE1.3 In-depth understanding of specialist bodies of knowledge
	PE1.4 Discernment of knowledge development and research directions
	PE1.5 Knowledge of engineering design practice
	PE1.6 Understanding of scope, principles, norms, accountabilities of sustainable engineering practice
PE2: Engineering Application Ability	PE2.1 Application of established engineering methods to complex problem solving
	PE2.2 Fluent application of engineering techniques, tools and resources
	PE2.3 Application of systematic engineering synthesis and design processes
	PE2.4 Application of systematic approaches to the conduct and management of engineering projects
PE3: Professional and Personal Attributes	PE3.1 Ethical conduct and professional accountability
	PE3.2 Effective oral and written communication (professional and lay domains)
	PE3.3 Creative, innovative and pro-active demeanour
	PE3.4 Professional use and management of information
	PE3.5 Orderly management of self, and professional conduct
	PE3.6 Effective team membership and team leadership
