Appendix A: Engineers Australia (EA) Competencies ...................................................................................... 12
1. Staff contact details

Contact details and consultation times for course convenor

Name: Dr. David C. Kellermann
Office location: Ainsworth 507
Tel: (02) 9385 7233
Email: d.kellermann@unsw.edu.au

Consultation time can be arranged via email. Step 1 is to talk to your peers or post on Moodle, step 2 is to discuss with your demonstrator, step 3 is to email your lecturer with your question, and only after all those steps have been exhausted you should attempt to arrange a meeting.

Contact details and consultation times for additional lecturers/demonstrators/lab staff

Head demonstrator:
Name: Michael Ling
Email: m.z.ling@unsw.edu.au

Please see the course Moodle.

3. Course details

Credit Points

This is a 6 unit-of-credit (UoC) course, and involves 5 hours per week (h/w) of face-to-face contact.

The UNSW website states “The normal workload expectations of a student are approximately 25 hours per semester for each UoC, including class contact hours, other learning activities, preparation and time spent on all assessable work. Thus, for a full-time enrolled student, the normal workload, averaged across the 16 weeks of teaching, study and examination periods, is about 37.5 hours per week.”
This means that you should aim to spend about 9 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

**Contact hours**

</tr>
</tbody>
</table>

**Summary and Aims of the course**

This course is a sequel to courses in Engineering Mechanics (MMAN1300 and MMAN2300) where you will have studied the dynamics of particles, rigid bodies and mechanisms under a number of simplifying assumptions – chiefly that motion occurs in the plane. Although not a prerequisite, it also follows on from the concepts learnt in Solid Mechanics (MMAN2400 and MMAN3400); however, we will introduce new absolute tensor notation, which is essentially like starting from scratch. In this course, you will examine systems that move and rotate in all three dimensions. You will also be presented with some instruction in the appropriate background mathematics necessary for the above. We will look at gyroscopic torque through pure three-dimensional formulation. We will introduce students to the modern formulation of continuum mechanics, which is a basis-free formalization of elasticity theory.

**Aims of the course**

In this course we will be looking at advanced topics within the Solid Mechanics (rather than Fluid Mechanics) stream of Engineering Mechanics. The aims of this course are split between the two major disciplines of Solid Mechanics, namely the *Mechanics of Rigid Bodies* and the *Mechanics of Deformable Bodies*:

1. You will gain new ways of seeing, explaining and predicting the behaviour of dynamic engineering systems via the Newton-Euler formulation of rigid body dynamics and a familiarity with the workings of basic Analytical Dynamics.
2. You will gain basic familiarity with some advanced tensor representations of elasticity theory in its more modern form known as “continuum mechanics” that will allow you to formulate large deformation solutions in solid mechanics.
You will be developing an advanced body of knowledge in engineering mechanics, enhancing your conceptual understanding of the fundamentals of analytical dynamics and nonlinear continuum mechanics - some of the research directions therein as well as your ability to communicate this new understanding to your peers and lay people. This course would be a complement to a Finite Element Methods or Composite Mechanics course.

**Student learning outcomes**

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

<table>
<thead>
<tr>
<th>Learning Outcome</th>
<th>EA Stage 1 Competencies</th>
</tr>
</thead>
</table>
| 1. Explain and describe principles and components of Rigid Body Dynamics, the Mechanics of Deformable Bodies and their inter-relationships formally and informally, in writing and verbally, to technical experts, peers and lay people. | 1.1, 1.3  
|                                                                                | 3.2, 3.4               |
| 2. Model, approximate, analyse and simulate the kinematics of rigid bodies in three dimensions using appropriate computational tools as necessary. Model materials using modern continuum mechanics formulations | 1.1, 1.2, 1.3  
|                                                                                | 2.1, 2.2  
|                                                                                | 3.2, 3.4               |
| 3. Model, approximate, analyse and simulate the mechanics of rigid and deformable bodies in three dimensions using Newton-Euler and basis-free formulations and appropriate computational tools as necessary. | 1.1, 1.2, 1.3  
|                                                                                | 2.1, 2.2  
|                                                                                | 3.2, 3.4               |
| 4. Apply the principles of engineering mechanics to the dynamics of particles and rigid bodies in three dimensions. Apply the principles of equilibrium, minimum potential energy and objectivity to the mechanics of deformable bodies. | 1.1, 1.2, 1.3  
|                                                                                | 2.1 |
4. Teaching strategies

This course will be delivered both in the classroom and online. Full participation in the class means that you will participate fully in both arenas. That is, you will be held accountable for all content, instructions, information, etc. that is delivered either in class or online. There will also be homework exercises that you will have to complete during your self-study time.

**Online:** The online forum for participation in this class is the Moodle Platform, specifically the MECH4320 course at [http://moodle.telt.unsw.edu.au/](http://moodle.telt.unsw.edu.au/). All official online interactions will take place or be linked clearly and appropriately from this site.

**In class:** There are two in-class activities in a typical week which we refer to as the Lecture and Problem-Solving Class based on the timetable above.

Both the online and in-class segments of this course are organised on the following principles:

1. **Learning:** Student learning is the first priority - teaching and assessment are secondary concerns. Learning here is defined as gaining new ways of seeing the world, not as being filled with information. We are trying to transform you into engineers and critical thinkers in the discipline.

2. **Peer Interaction:** Learning is a social activity, and research shows that you will learn most and best when you are actively taught by your peers and, in turn, when you teach them.

3. **Authenticity:** We will have as much authenticity of engineering practice as is possible within the constraints of the course and where it does not restrain your learning.

4. **High standards:** We will have high standards for achievement in the course, and everyone (including staff) will be accountable for putting in the effort to get you to the standard.

5. **Openness:** As much of the course as possible will be conducted in the open where all participants can be aware of it and comment upon it.

6. **Process:** The focus of the course will be on processes, not outcomes. The right outcomes will be a by-product of following the correct processes.
## 5. Course schedule

<table>
<thead>
<tr>
<th>Week</th>
<th>Topics</th>
<th>Readings</th>
</tr>
</thead>
</table>
| Block 1 | 1 | Linear Transformations, Rotation Matrices  
Kinematics and Kinetics of Particles in three dimensions  
Cylindrical Polar Coordinate System | AED: Ch. 1.1-4, Ch. 2.1-3, Ch. 3.1-2 |
| 2 | Spherical Coordinate System  
Path Coordinates  
Covariant and Contravariant Basis Vectors | AED: Ch. 2.1-3, Ch. 3.1-2, Ch. 6.1 |
| 3 | Work, Energy and Power for a Particle  
Conservative Forces  
Constraints | AED: Ch. 3.1-2, Ch. 4.1, Ch. 6.2 |
| Block 2 | 4 | Kinematics of rigid bodies in three dimensions  
Introduction to Tensors  
Rotation and Angular Velocity Tensors | AED: Ch. 4 |
| 5 | Moment-free motion of rigid bodies  
Centre of Mass  
Inertia Tensors and Principle Axes | AED: Ch. 5.1-3 |
| 6 | Newton-Euler formulation of rigid bodies  
Euler Angles  
Work, Energy and Power for a Rigid Body | AED: Ch. 4.2, Ch. 5.4-6 |
| Block 3 | 7 | Introduction to vector and tensor algebra and calculus:  
- Indicial notation  
- Absolute tensor notation | NSM: Ch. 1 |
| 8 | Kinematics:  
- Deformation tensor and polar decomposition  
- Finite strain tensors | NSM: Ch. 2 |
| 9 | Forces, tractions  
Finite stress tensors and transformations  
Lagrangian and Eulerian measures | NSM: Ch. 3 |
| Block 4 | 10 | Constitutive modelling  
Material tensors  
Orthotropic material modelling | NSM: Ch. 6 |
| 11 | Material nonlinearity and hyperelasticity  
Strain energy functions  
Compressible and incompressible materials | NSM: Ch. 6 |
| 12 | Principle of minimum potential energy  
Balance laws  
Objectivity: Principle of Material Frame indifference | NSM: Ch. 4, Ch. 5 |

The table above refers to the following recommended texts:  
AED: Advanced Engineering Dynamics  
NSM: Nonlinear Solid Mechanics
## 6. Assessment

### Assessment overview

<td>1 - 5</td>
<td>All course content from weeks 1-12 inclusive.</td>
<td>Exam period, date TBC</td>
<td>N/A</td>
<td>Upon release of final results</td>
</tr>
</tbody>
</table>
Assignments

Presentation

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with due respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

Submission

Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of 20 per cent (20%) of the maximum mark possible for that assessment item, per calendar day.

The late penalty is applied per calendar day (including weekends and public holidays) that the assessment is overdue. There is no pro-rata of the late penalty for submissions made part way through a day.

Work submitted after the ‘deadline for absolute fail’ is not accepted and a mark of zero will be awarded for that assessment item.

For some assessment items, a late penalty may not be appropriate. These are clearly indicated in the course outline, and such assessments receive a mark of zero if not completed by the specified date. Examples include:

a. Weekly online tests or laboratory work worth a small proportion of the subject mark,
   or
b. Online quizzes where answers are released to students on completion, or
c. Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date, or
d. Pass/Fail assessment tasks.

Marking

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

Examinations

You must be available for all tests and examinations. Final examinations for each course are held during the University examination periods, which are June for Semester 1 and November for Semester 2.

Provisional Examination timetables are generally published on myUNSW in May for Semester 1 and September for Semester 2.

For further information on exams, please see the Exams section on the intranet.
Calculators

You will need to provide your own calculator, of a make and model approved by UNSW, for the examinations. The list of approved calculators is shown at student.unsw.edu.au/exam-approved-calculators-and-computers.

It is your responsibility to ensure that your calculator is of an approved make and model, and to obtain an “Approved” sticker for it from the School Office or the Engineering Student Centre prior to the examination. Calculators not bearing an “Approved” sticker will not be allowed into the examination room.

Special consideration and supplementary assessment

For details of applying for special consideration and conditions for the award of supplementary assessment, see the information on UNSW’s Special Consideration page. Special considerations must be lodged within 48 hours of the assessment otherwise they will be automatically rejected.

7. Expected resources for students

The following textbooks will be used for this course. I have chosen economic textbooks that are also high-quality reference books you will be able to use throughout your career. I expect all students to bring the relevant book to class during the coverage of each topic.

<table>
<thead>
<tr>
<th>Book Title</th>
<th>Author</th>
<th>Topic</th>
<th>Covered</th>
<th>Available from UNSW Bookshop</th>
</tr>
</thead>
<tbody>
<tr>
<td>Advanced Engineering Dynamics, (AED)</td>
<td>Ginsberg, Jerry H.</td>
<td>Mechanics of rigid bodies</td>
<td>Weeks 1-6</td>
<td>$97.65</td>
</tr>
<tr>
<td>Nonlinear Solid Mechanics: (NSM)</td>
<td>Holzapfel, Gerhard A.</td>
<td>Mechanics of deformable bodies</td>
<td>Weeks 7-12</td>
<td>$106.95</td>
</tr>
</tbody>
</table>

Weekly course material will be available on the MECH4320 Moodle Page at http://moodle.tefl.unsw.edu.au/.

These and many other relevant resources are available at the UNSW Library: https://www.library.unsw.edu.au/
8. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the UNSW myExperience process, informal discussion in the final class for the course, and the School’s Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

In this course, recent improvements resulting from student feedback include:
- More reasonable workload, in line with typical 6UOC subject
- Better textbooks
- Improved structure
- Improved lecture notes
- More past papers
- More learning resources and more practice questions
- More practical questions relating to engineering applications

9. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism: student.unsw.edu.au/plagiarism The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student’s work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters
(like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here: www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf

Further information on School policy and procedures in the event of plagiarism is available on the intranet.

10. Administrative matters and links

All students are expected to read and be familiar with School guidelines and polices, available on the intranet. In particular, students should be familiar with the following:

- Attendance, Participation and Class Etiquette
- UNSW Email Address
- Computing Facilities
- Assessment Matters (including guidelines for assignments, exams and special consideration)
- Exams
- Approved Calculators
- Academic Honesty and Plagiarism
- Student Equity and Disabilities Unit
- Health and Safety
- Student Support Services
## Appendix A: Engineers Australia (EA) Competencies

### Stage 1 Competencies for Professional Engineers

<table>
<thead>
<tr>
<th>Program Intended Learning Outcomes</th>
