1. Staff contact details

Contact details and consultation times for course convenor

Name: Dr Sonya A Brown
Office location: Ainsworth 408D
Tel: (02) 9385 7938
Email: sonya.brown@unsw.edu.au

I will attend the first half-hour of each tutorial session. It is preferred for any queries to be addressed in this time. If this is not possible, please email me.

Contact details and consultation times for additional lecturers/demonstrators/lab staff

Name: Rick Reid
Role: CATIA Facilitator
Email: richard.reid@UNSWalumni.com

Name: Jarred (Junyan) Chen
Role: Demonstrator
Email: junyan.chen@unsw.edu.au

Name: Congyuan Tao
Role: Demonstrator
Email: c.tao@unsw.edu.au

Name: Christie Lau
Role: Demonstrator
Email: christie.lau@unsw.edu.au

3. Course details

Credit points

This is a 6 unit-of-credit (UoC) course and involves 6 hours per week (h/w) of face-to-face contact.

The normal workload expectations of a student are approximately 25 hours per term for each UoC, including class contact hours, other learning activities, preparation and time spent on all assessable work.

You should aim to spend about 14 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

Please refer to your class timetable for the learning activities you are enrolled in and attend only those classes.

Summary and Aims of the course

This course aims to provide students with a grounding in aerospace design, in terms of both structural design and systems design. The course includes the design process, aerospace load cases, margins of safety, international units, regulations, detailed aerospace structural design, and an introduction to aerospace systems design. CATIA is taught in parallel to develop skills in a common computer-aided design tool used in the aerospace industry. The final project aims to provide an experiential learning opportunity and develop team work skills, with students completing a Design-Build-Test project in small groups by designing a representative aerospace part to meet a set of requirements, manufacturing the part, and testing it to failure.
Students are expected to have a sound understanding of engineering design and drawing, statics and free body diagrams, manufacturing, aerospace structural analysis, and flight performance prior to attempting this course.

**Student learning outcomes**

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

<table>
<thead>
<tr>
<th>Learning Outcome</th>
<th>EA Stage 1 Competencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Design an aerospace structure to meet regulatory requirements and a given design brief.</td>
<td>PE 1.3, PE 1.5, PE 2.3, PE 3.2</td>
</tr>
<tr>
<td>2. Evaluate and justify systems selection and implementation for a variety of aerospace systems.</td>
<td>PE 1.3, PE 1.4, PE 2.3, PE 3.2</td>
</tr>
<tr>
<td>3. Apply computer-aided design tools to model an aerospace design.</td>
<td>PE 1.5, PE 2.2</td>
</tr>
<tr>
<td>4. Identify appropriate engineering data sources and regulations and apply in the context of aerospace design.</td>
<td>PE 1.6, PE 3.1</td>
</tr>
</tbody>
</table>

**4. Teaching strategies**

The course is divided into 4 modules:
- 1: Aerospace Structural Design
- 2: Aerospace Systems Design
- 3: CATIA
- 4: Design-Build-Test

Lectures will cover the main theoretical course content for Modules 1 and 2, with Tutorials providing time to work through the design problems relating to the lecture material with demonstrator support provided to assist understanding. CATIA content for Module 3 will be provided prior to each CATIA laboratory session via a video, with each lab having set exercises each week to take you through the range of functions available for modelling in the software. Module 4 consists of a design-build-test activity, linking back to the structural design lecture material, but giving students the opportunity to develop further understanding via an experiential project. Team work will also form part of Module 4 to assist in developing the communication and interpersonal skills critical for industry.

**Lectures**

Lectures will cover the main theoretical course content. Lecture recordings will also be available online. Team Based Learning (TBL) sessions will be used in three systems lectures to encourage additional interaction with the content.
Tutorials

Tutorial time will be used as time to work through the required design problems, with demonstrator support available to answer questions.

CATIA

CATIA labs will have set exercises each week to take you through the range of functions available for modelling in the software. CATIA is selected as it is used by a large number of aerospace companies. Each session will include introductory remarks and demonstrations of the content, and demonstrators will be available to assist with modelling questions.

Design-Build-Test

The Design-Build-Test project is focused on experiential learning techniques. Each team will design an aircraft part to meet a detailed set of requirements. Each team will need to manufacture their own part, and this will be tested to failure, and hence allow teams to review the structural performance of their design.

5. Course schedule

Note: As this course has been newly re-developed, topics and order are subject to change.

<td>Yes (3-4)</td>
<td>20 pages max [6]</td>
<td>30%</td>
<td>1 &amp; 4</td>
<td>Design report working and results; drawings; strength, weight and cost of structure. Peer evaluation.</td>
<td>Test Article: Start of your Week 10 workshop Report: 4:00pm Monday 19th August</td>
<td>Test Article: N/A Report: 4:00pm Saturday 24th August</td>
<td>Upon release of final results</td>
</tr>
</tbody>
</table>

**Notes:**
1. Quizzes will occur in-class during one of the lecture sessions in the listed week.
2. The group assessment mark will be moderated by academic review and peer evaluation to give an individual mark for the assessment.
3. For the group assessment, an individual statement of claim of contributions must be submitted electronically by the assessment due date. Failure to submit an individual statement of claim for the assessment will result in an individual penalty of 10% of the maximum mark.
mark possible for the assessment.

4. For the group assessment, a peer evaluation must be completed electronically. Peer evaluations for the Design-Build-Test project must be completed by 4:00pm Thursday 22nd August. Failure to complete the peer evaluation by the required deadline for the assessment will result in an individual penalty of 10% of the maximum mark possible for the assessment.

5. The Design-Build-Test Report is required to be submitted in hard copy, as well as electronically.

6. Maximum page numbers exclude front matter, references and appendices.

Further assessment details may be found on the course Moodle once released.

Assignments

Attendance

Attendance is required at all tutorials, workshops/labs and computer labs. If your absence equates to more than 20% of tutorials, workshops/labs and computer labs, you may fail the course, or be denied special consideration.

Presentation

All non-electronic submissions should have a standard School cover sheet, which is available from this course’s Moodle page.

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with due respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

Submission

Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of 20 percent (20%) of the maximum mark possible for that assessment item, per calendar day.

The late penalty is applied per calendar day (including weekends and public holidays) that the assessment is overdue. There is no pro-rata of the late penalty for submissions made part way through a day.
Work submitted after the ‘deadline for absolute fail’ is not accepted and a mark of zero will be awarded for that assessment item.

For some assessment items, a late penalty may not be appropriate. These are clearly indicated in the course outline, and such assessments receive a mark of zero if not completed by the specified date. Examples include:
   a. Weekly online tests or laboratory work worth a small proportion of the subject mark, or
   b. Online quizzes where answers are released to students on completion, or
   c. Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date, or
   d. Pass/Fail assessment tasks.

Marking

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

Examinations

You must be available for all tests and examinations. Final examinations for each course are held during the University examination periods: February for Summer Term, May for T1, August for T2, and November/December for T3.

Please visit myUNSW for Provisional Examination timetable publish dates.

For further information on exams, please see the Exams webpage.

Calculators

You will need to provide your own calculator of a make and model approved by UNSW for the examinations. The list of approved calculators is available at student.unsw.edu.au/exam-approved-calculators-and-computers

It is your responsibility to ensure that your calculator is of an approved make and model, and to obtain an “Approved” sticker for it from the Engineering Student Supper Services Centre prior to the examination. Calculators not bearing an “Approved” sticker will not be allowed into the examination room.

Special consideration and supplementary assessment

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.
Please note that UNSW now has a Fit to Sit / Submit rule, which means that if you sit an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW’s Special Consideration page.

7. Expected resources for students

Required Texts

Recommended Reading

- Federal Aviation Regulations, FAR 23, Airworthiness Standards: Normal Category Airplanes
- Federal Aviation Regulations, FAR 25, Airworthiness Standards: Transport Category Airplanes
- DOT/FAA/AR-MMPDS, Metallic Materials Properties Development and Standardization (MMPDS), (previously MIL-HDBK-5)
- CMH-17, Composite Materials Handbook, (previously MIL-HDBK-17)

Leganto Reading List available via the course Moodle.
UNSW Library website: https://www.library.unsw.edu.au/

8. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the UNSW myExperience process, informal discussion in the final class for the course, and the School’s
Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

In this course, recent improvements resulting from student feedback include:
- Development of an introductory tutorial activity for each design problem.
- CATIA content each week will be presented via videos, to enable students to review content as they work through the exercises.

9. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism, visit: student.unsw.edu.au/plagiarism. The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student’s work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here: www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf
10. Administrative matters and links

All students are expected to read and be familiar with UNSW guidelines and polices. In particular, students should be familiar with the following:

- Attendance
- UNSW Email Address
- Computing Facilities
- Special Consideration
- Exams
- Approved Calculators
- Academic Honesty and Plagiarism
- Student Equity and Disabilities Unit
- Health and Safety
- Lab Access
