Appendix A: Engineers Australia (EA) Competencies
1. Staff contact details

Contact details and consultation times for course convenor

Name: Dr Chris Menictas  
Office: Location: Room 402F, Mechanical and Manufacturing Engineering  
Tel: (02) 9385 6269  
Fax: (02) 9663 1222  
Email: c.menictas@unsw.edu.au

Contact details and consultation times for additional lecturers/demonstrators/lab staff

Name: Declan Keogh  
Office: Location: Room 402, Mechanical and Manufacturing Engineering  
Email: d.keogh@unsw.edu.au

Name: Mitchell Kazmierczak  
Office: Location: Room 410, UNSW Business School

Name: Jianhong Lin  
Office: Location: Room 402, Mechanical and Manufacturing Engineering

Name: Hengrui Liu  
Office: Location: Room 505, Mechanical and Manufacturing Engineering

Consultation with the course convenor and demonstrators concerning this course is available on as per the timetable posted to Moodle unless otherwise advised.

2. Important links

3. Course details

Credit Points

This is a 6 unit-of-credit (UoC) course and involves 4 hours per week (h/w) of face-to-face contact.
The normal workload expectations of a student are approximately 25 hours per term for each UOC, including class contact hours, other learning activities, preparation and time spent on all assessable work.

You should aim to spend about 12 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

**Contact hours**

**Summary and Aims of the course**

This course introduces the student to the terminology, principles and methods used in refrigeration and air conditioning.

The aim of this course is to take your knowledge of thermodynamics further, and in a much more general fashion, than you obtained in your first course in thermodynamics. In particular, to extend your theoretical background of the thermodynamics of refrigeration and air conditioning.

The term air conditioning implies the creation and maintenance of an atmosphere having such conditions of: (i) temperature, (ii) humidity, (iii) air circulation and (iv) air purity, as to produce the desired effects upon the occupants or materials (or both) in a given space. It is the simultaneous control of all these four factors within required limits which defines an air conditioning system.

Refrigeration is the control of the environment, e.g. air conditioning, cold room, refrigerators, display cabinets etc., and involves the use of refrigeration in one form or another. In this course the topics covered include: psychrometry, cooling and heating loads, applied psychrometrics and air conditioning, system analysis and mathematical modelling, air duct design, refrigerants, vapour compression refrigeration, multi-stage vapour compression systems, components of vapour compression systems and other types of cooling systems.

The objectives of the course are to:

- Familiarise you with the terminology associated with refrigeration & air conditioning
- To cover the basic principles of psychrometry and applied psychometrics
- Familiarise you with system analysis and mathematical modelling
- Familiarise you with load calculations and elementary duct design
- Familiarise you with refrigerants; vapour compression refrigeration and multi-stage vapour compression systems
- Understand the components of vapour compression systems and other types of cooling systems.

**Student learning outcomes**

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

<table>
<thead>
<tr>
<th>Learning Outcome</th>
<th>EA Stage 1 Competencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Be familiar with the terminology associated with refrigeration &amp; air conditioning</td>
<td>PE1.3</td>
</tr>
<tr>
<td>2. Apply the basic principles of psychrometry and applied psychrometrics</td>
<td>PE1.1</td>
</tr>
<tr>
<td>3. Undertake system analysis and mathematical modelling</td>
<td>PE1.1, PE1.2</td>
</tr>
<tr>
<td>4. Perform load calculations and elementary duct design</td>
<td>PE1.1, PE1.2, PE1.3, PE1.5 PE2.1, PE3.2, E3.5</td>
</tr>
<tr>
<td>5. Be familiar with refrigerants; vapour compression refrigeration systems</td>
<td>PE1.1, PE1.2, PE1.3, PE1.5, PE2.1, PE2.2</td>
</tr>
<tr>
<td>6. Understand the components of vapour compression systems and other types of cooling systems.</td>
<td>PE1.1, PE1.2, PE1.3, PE1.5, PE2.1, PE2.2, PE2.4</td>
</tr>
</tbody>
</table>

**4. Teaching strategies**

- Presentation of the material in lectures, workshops and laboratory sessions so that students know how to approach complex engineering calculations required in industry.
- To present a wealth of real-world engineering examples to give students a feel for how refrigeration and air conditioning is applied.
5. Course schedule

A schedule of lectures for each week and relevant readings from the textbook and other reference material is shown in Table 1.

Table 1   Lecture Schedule

<table>
<thead>

<td>Chapter 14</td>
</tr>
</tbody>
</table>

Note: The above schedule is subject to change at short notice to suit exigencies.
6. Assessment

You are assessed by way of two assignments, one quiz, and examination which involve both calculations and descriptive material. These assessments test your grasp of the principles involved, and are typical of the calculations you will be expected to perform as graduate mechanical engineers.

All assessments must be attempted.

Assessment overview

<table>
<thead>
<tr>
<th>Assessment</th>
<th>Length</th>
<th>Weight</th>
<th>Learning outcomes assessed</th>
<th>Assessment criteria</th>
<th>Due date and submission requirements</th>
<th>Marks returned</th>
<th>Deadline for absolute fail</th>
</tr>
</thead>
</table>
| Assignment 1 | TBA    | 40%    | 1, 2, 3 and 4              | Technical content, design capability and report writing skills | Part A: 5:00pm, Friday 25th October (Wk6)  
Part B: 5:00pm, Monday 25th November (Wk11) | Part A: Two weeks after submission  
Part B: During exam period | Part A: 5:00pm, Wednesday 30th October  
Part B: 5:00pm, Saturday 30th November |
| Assignment 2 | TBA    | 10%    | 1, 3, 5 and 6              | Technical content, design capability and report writing skills | 9:00 am, Tuesday 12th November (Wk9)          | Two weeks after submission | 9:00 am, Sunday 17th November                      |
| Quiz         | 2 hours| 20%    | 1, 2 and 3                 | Understanding of lecture material                          | Wednesday Week 4 during lecture time         | Two weeks after submission | N/A                                               |
| Final exam   | 2 hours| 30%    | 1, 2, 4, 5 and 6           | All course content from weeks 1-10                        | Exam period, date TBC                       | During results period           | N/A                                               |
Assignments

*Presentation*

All submissions should have a standard School cover sheet which is available from this course’s Moodle page.

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work. Presenting them clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

*Submission*

Assignments should be submitted as instructed in the assignment question.

Late submissions will be penalised 20% per calendar day (including weekends). An extension may only be granted in exceptional circumstances. Special consideration for assessment tasks must be processed through [student.unsw.edu.au/special-consideration](http://student.unsw.edu.au/special-consideration).

It is always worth submitting late assessment tasks when possible. Completion of the work, even late, may be taken into account in cases of special consideration.

Where there is no special consideration granted, the ‘deadline for absolute fail’ in the table above indicates the time after which a submitted assignment will not be marked, and will achieve a score of zero for the purpose of determining overall grade in the course.

*Marking*

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

*Examinations*

You must be available for all tests and examinations. Final examinations for each course are held during the University examination periods: February for Summer Term, May for T1, August for T2, and November/December for T3.

Please visit myUNSW for Provisional Examination timetable publish dates.

For further information on exams, please see the [Exams](http://student.unsw.edu.au/exam-approved-calculators-and-computers) webpage.

*Calculators*

You will need to provide your own calculator of a make and model approved by UNSW for the examinations. The list of approved calculators is available at [student.unsw.edu.au/exam-approved-calculators-and-computers](http://student.unsw.edu.au/exam-approved-calculators-and-computers).

It is your responsibility to ensure that your calculator is of an approved make and model, and to obtain an “Approved” sticker for it from the Engineering Student Supper Services Centre prior to the examination. Calculators not bearing an “Approved” sticker will not be allowed into the examination room.
Special consideration and supplementary assessment

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.

Please note that UNSW now has a Fit to Sit / Submit rule, which means that if you sit an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW’s Special Consideration page.

7. Expected resources for students

Textbooks

Textbooks which will be used in the course:

Required and suggested additional readings

- *AIRAH Application Manuals*, Australian Institute of Refrigeration, Air Conditioning and Heating.

These are all available in the UNSW Library: [https://www.library.unsw.edu.au/](https://www.library.unsw.edu.au/)

8. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the UNSW myExperience process, informal discussion in the final class for the course, and the School’s Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

In this course, recent improvements resulting from student feedback include additional guest lectures to provide an industry perspective and case studies during various lectures. Recent changes include the addition of a mid-session quiz and the structure of assignment 1.

9. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism: student.unsw.edu.au/plagiarism The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student’s work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here: www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf
10. Administrative matters and links

All students are expected to read and be familiar with School guidelines and polices, available on the intranet. In particular, students should be familiar with the following:

- Attendance
- UNSW Email Address
- Computing Facilities
- Special Consideration
- Exams
- Approved Calculators
- Academic Honesty and Plagiarism
- Disability Support Services
- Health and Safety
- Lab Access
