1. Staff contact details

Contact details and consultation times for course convenor

Name: Dr Jose Guivant
Office location: Building J17, Room 510D
Tel: (02) 9385 5693
Email: j.guivant@unsw.edu.au

Consultations will take place in L212/J18. The consultation timeslots will be announced later. Consultations are possible outside the set times, but a prior appointment is preferred. Email, telephone and Moodle discussions can also be used for solving more general issues.

Contact details and consultation times for additional lecturers/demonstrators/lab staff

Name: Dr Ngai Ming Kwok
Office location: Building J17, Room 510C
Tel: (02) 9385 6091
Email: nmkwok@unsw.edu.au

Consultation by email appointment.

Please see the course [Moodle](#).

3. Course details

Credit points

This is a 6 unit-of-credit (UoC) course and involves 4.5 hours per week (h/w) of face-to-face contact.

The normal workload expectations of a student are approximately 25 hours per term for each

UOC, including class contact hours, other learning activities, preparation and time spent on all assessable work.

You should aim to spend about 12 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

Contact hours

	Day	Time	Location
Lectures	Tuesday	09:00 -11:30	Webster Theatre A (G15-190)
Lab/Tutorials	(*)	(*)	Mechatronics Lab 212 (J18)

(*) Please refer to your class timetable for the learning activities in which you are enrolled and attend only those classes. If you need additional time, please contact the Lecturer to organize possible extra lab sessions.

Please see variations of the nominal timetable (due to holidays, etc) here:

<http://timetable.unsw.edu.au/2020/MTRN4010.html>

Summary and Aims of the course

The course is aimed at learning basic and advanced techniques necessary for the sensing and control of autonomous systems. Contents covered in this course are the theory and application of topics such as Stochastic Processes, Bayesian State Estimation (including Kalman Filter, Extended Kalman Filters), Sensor Data Fusion, Fuzzy Logic, Particle Swarm Optimization (PSO) and Neural Networks. Half of the course is lecture-based. In the other half, the students apply the concepts on real data and, at the end of the session, a real platform (UGV-Unmanned Ground Vehicle).

The following are the course objectives:

- Understanding of the general problem of Modelling and Estimation of Stochastic Dynamic Processes.
- Understanding the Implementation of stochastic Sensor Data Fusion for solving Engineering Problems.
- Using those concepts for a real application: Robot Perception and Localization.
- Understanding the theory of advanced techniques such as Fuzzy Logic, PSO and Neural Networks.
- Be able to implement simulations and real systems for the control and estimation of processes such as a mobile robotic platform.
- Enable students to work to improve problem-solving skills.
- Obtain experience working with current sensing technology in Field Robotics.

Concepts included in this course are useful for other disciplines, in research, development and industrial application.

Student learning outcomes

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

Learning Outcome		EA Stage 1 Competencies
1.	Understand the general theory of Bayesian Estimation. Understand the theory and application of the Kalman Filter (KF and EKF) for solving diverse types of problems in the area of Engineering	PE1.1
2.	Understand methods such as Neural Networks, Fuzzy Logic and PSO.	PE1.1
3.	Be able to develop software for applying the theory, and actually solving complex problems. Have experience in using state-of-the-art sensors, used in Field Robotics and Autonomous Systems.	PE2.3

4. Teaching strategies

Teaching of this course is implemented through lectures to cover the theory, and project sessions to put those concepts in practice. All laboratory/project work is individual work, and attendance is necessary.

The provision of the learning environment in the laboratory is to facilitate students developing confidence in managing laboratory tasks as projects. Demonstrators in the laboratories are there to provide guidance and assistance in managing the laboratory tasks.

Examples (e.g. source code) for the projects are provided by the Lecturer, to help in the understanding and full implementation of the projects. Project complexity is incremental, to allow the student to finally complete the solution of a complex problem.

Lectures have a nominal duration of 2.5 hours. However, the last ½ hour is intended to be dedicated to discussions, and clarification of concepts; and for showing related material, which may be useful for helping the understanding of the previously presented material.

5. Course schedule

Week	Topic	Loc.	Demonstration Lab Content	Suggested Readings
1	Refreshing concepts (Statistics, Control). Typical Sensors and Models	LR	WP	Moodle lecture notes (*)
2	Estimation 1	LR	WP	Moodle lecture notes
3	Estimation 2	LR	WP	Moodle lecture notes
4	Estimation 3. Localization 1. Middle session quiz	LR	WP	Moodle lecture notes
5	Localization 2	LR	WP	Moodle lecture notes
6	Flexibility week / Advanced topic.	LR	WP	Moodle lecture notes
7	Modelling by neural networks	LR	WP	Moodle lecture notes
8	Fuzzy control for mobile robots	LR	WP	Moodle lecture notes
9	Metaheuristics for system optimization	LR	WP	Moodle lecture notes
10	Intelligent autonomous systems	LR	WP	N/A

During the flexibility week we will discuss about concepts presented in weeks 1-5. An advanced topic (e.g. SLAM) will be presented. This topic is not included in the assessment of the course.

LR= Webster Theatre A (G15-190):

WP=working on projects.

6. Assessment

Assessment overview

Assessment task	Group Project?	If Group, number of Students per group	Length	Weight	Learning outcomes assessed	Assessment criteria	Due date, time, and submission requirements	Deadline for Absolute fail	Marks returned
Projects	No	N/A	3 projects	50%	1,2,3	Refer to assignment specifications for exact details.	See details in the section about Projects	See details in the section about Projects	See details in the section about Projects
Final exam	No	N/A	2 hours	50%	1,2,3	All course content from weeks 1-10	Exam period, date TBC.	N/A	Upon release of final results

This course will include the following hurdle requirements that are closely linked to a set of learning outcomes which demonstrate that you have acquired the required skills and competencies within this discipline:

- A minimum mark of 40% must be obtained for the final exam in order to pass this course. Failure to achieve this minimum mark will result in an unsatisfactory fail (UF) grade, regardless of the performance in the rest of the course.
- A minimum mark of 40% must be obtained for the total project component of the course, in order to pass this subject. Failure to achieve this minimum mark will result in an unsatisfactory fail (UF) grade, regardless of the performance in the rest of the course

Project overview

All the projects are specified to be individual work, except some component of project 1, which can be developed in teams. In addition, all the projects will be released well in advance (3 weeks in advance, at least) before the submission dates.

Project task	Group Project?	If Group, # of Students per group	Length	Weight	Learning outcomes assessed	Assessment criteria	Due date, time, and submission requirements	Deadline for Absolute fail	Marks returned
Task 0	No	N/A	Problems	0%	Refreshing concepts.	No assessment	---	N/A	N/A
Project 1	No (note 3)	N/A (note 3)	Completely operational software	30%	3	Refer to assignment specification for exact details (note 1).	Meeting demonstrator, weeks 6 (notes 2,4). Submitting brief report, about Part A of the project, in week 4.(5%)	1 week later	< 10 days later
Project 2	No	N/A	Completely operational software	35%	1,3	Refer to assignment specification for exact details (note 1)	Meeting demonstrator, week 8 (note 2,4).	1 week later	< 10 days later
Project 3	No	N/A	Completely operational software	35%	2	Refer to assignment specification for exact details (note 1).	Meeting demonstrator, week 10 (note 2).	1 week later	< 10 days later

(1): Provided via Moodle; 1 week before the official release of the project.

(2) During your nominal lab session, that week.

(3) Part of this project can be solved in groups.

(4) Brief quizzes (20minutes) can be included as part of the demonstration of Projects 1 and 2. Those may take place during lab time or during lecture time, in the same week of the project demonstrations, and the students will be informed in advance if the demonstration of the project will include a quiz. The quizzes include basic questions related to concepts which are absolutely necessary for solving the projects and will be fully related to the task being evaluated. The mark obtained in a quiz associated with a project does affect the final mark of the project. Its relevance will be described in the project release.

Assignments

Presentation

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with due respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

Submission

Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of 20 percent (20%) of the maximum mark possible for that assessment item, per calendar day.

The late penalty is applied per calendar day (including weekends and public holidays) that the assessment is overdue. There is no pro-rata of the late penalty for submissions made part way through a day.

Work submitted after the 'deadline for absolute fail' is not accepted and a mark of zero will be awarded for that assessment item.

For some assessment items, a late penalty may not be appropriate. These are clearly indicated in the course outline, and such assessments receive a mark of zero if not completed by the specified date. Examples include:

- a. Weekly online tests or laboratory work worth a small proportion of the subject mark, or
- b. Online quizzes where answers are released to students on completion, or
- c. Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date, or
- d. Pass/Fail assessment tasks.

Marking

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

Examinations

You must be available for all quizzes, tests and examinations.

Final examinations for each course are held during the University examination periods: February for Summer Term, May for T1, August for T2, and November/December for T3.

Please visit myUNSW for Provisional Examination timetable publish dates.

For further information on exams, please see the [Exams](#) webpage.

Calculators

You will need to provide your own calculator of a make and model approved by UNSW for the examinations. The list of approved calculators is available at student.unsw.edu.au/exam-approved-calculators-and-computers

It is your responsibility to ensure that your calculator is of an approved make and model, and to obtain an “Approved” sticker for it from the [Engineering Student Support Services Centre](#) prior to the examination. Calculators not bearing an “Approved” sticker will not be allowed into the examination room.

Special consideration and supplementary assessment

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.

Please note that UNSW now has a [Fit to Sit / Submit rule](#), which means that if you sit an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW's [Special Consideration page](#).

7. Expected resources for students

Lecture notes

Lecture notes and tutorials will be available on Moodle, before the class.

Other Resources

All the academic material is provided by the lecturers (lecture notes, example data, software libraries, example code, sensors and equipment).

In addition to the real-time data provided by the sensors, datasets of typical measurements are provided for allowing the students to perform playback sessions and work at home when needed.

8. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the UNSW myExperience process, informal discussion in the final class for the course, and the School's Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

In this course, recent improvements resulting from student feedback include:

- Extended opening times to laboratories and computers. More computers are available in the lab, for working in the projects.
- Projects have been reorganized, for better adaptation to the trimester modality.

9. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. *Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.*

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism, visit: student.unsw.edu.au/plagiarism. The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student's work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here:

www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf

10. Administrative matters and links

All students are expected to read and be familiar with UNSW guidelines and policies. In particular, students should be familiar with the following:

- [Attendance](#)
- [UNSW Email Address](#)
- [Special Consideration](#)
- [Exams](#)
- [Approved Calculators](#)
- [Academic Honesty and Plagiarism](#)
- [Equitable Learning Services](#)

Appendix A: Engineers Australia (EA) Competencies

Stage 1 Competencies for Professional Engineers

	Program Intended Learning Outcomes
PE1: Knowledge and Skill Base	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals
	PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing
	PE1.3 In-depth understanding of specialist bodies of knowledge
	PE1.4 Discernment of knowledge development and research directions
	PE1.5 Knowledge of engineering design practice
	PE1.6 Understanding of scope, principles, norms, accountabilities of sustainable engineering practice
PE2: Engineering Application Ability	PE2.1 Application of established engineering methods to complex problem solving
	PE2.2 Fluent application of engineering techniques, tools and resources
	PE2.3 Application of systematic engineering synthesis and design processes
	PE2.4 Application of systematic approaches to the conduct and management of engineering projects
PE3: Professional and Personal Attributes	PE3.1 Ethical conduct and professional accountability
	PE3.2 Effective oral and written communication (professional and lay domains)
	PE3.3 Creative, innovative and pro-active demeanour
	PE3.4 Professional use and management of information
	PE3.5 Orderly management of self, and professional conduct
	PE3.6 Effective team membership and team leadership
