Course Details

Units of Credit 6

Summary of the Course

This course builds upon the acquired knowledge of an introductory course in vibrations (such as MMAN2300) where you will have studied oscillatory systems under a number of simplifying assumptions – sinusoidal forcing, constant coefficients, simple boundary conditions, etc. In this course, you will examine more complex systems and excitations. As such, you will be exposed to new techniques for seeing, measuring, thinking about, analysing and designing oscillatory systems. These analytical and computational tools will be applied to the challenging and critical application of machine condition monitoring. Vibration-based condition monitoring is a large and expanding field of engineering research and application, which allows massive safety improvements and economic advantages in almost every industry.

The following assumed knowledge is expected for students undertaking this course: MATH2019 and MMAN2300.

Areas of study include: free and forced responses of single degree-of-freedom spring-mass-damper systems; harmonic analysis; linear vibrations of multi-degree-of-freedom systems, normal modes; analysis of continuous systems, longitudinal/torsional vibration of bars and rods, bending vibration of beams; vibration measuring instruments; experimental vibration analysis; typical sources of vibration in machines; modal analysis; vibration testing; typical machine and machine component faults and corresponding vibration signatures; diagnostic procedures and related signal processing techniques.

Course Learning Outcomes

After successfully completing this course, you should be able to:

<table>
<thead>
<tr>
<th>Learning Outcome</th>
<th>EA Stage 1 Competencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Model, approximate, analyse and design vibratory systems and their responses.</td>
<td>PE1.1, PE1.2, PE1.3, PE1.5, PE2.1, PE2.2, PE2.3</td>
</tr>
<tr>
<td>2. Discern the relevant principles that must be applied to describe or measure the equilibrium or motion of vibratory systems and discriminate between relevant and irrelevant information in the context.</td>
<td>PE1.1, PE1.2, PE1.3</td>
</tr>
<tr>
<td>3. Program vibration analysis code to implement vibration signal analysis and extract fault symptoms in rotating machines.</td>
<td>PE1.3, PE2.2, PE2.3</td>
</tr>
<tr>
<td>4. Diagnose typical machine faults based on the output of signal processing tools and recommend proper actions.</td>
<td>PE1.3, PE1.6, PE2.1, PE2.2</td>
</tr>
<tr>
<td>5. Produce appropriate reports to communicate about technical matters relating to vibration and machine condition monitoring at a professional engineering level.</td>
<td>PE3.1, PE3.2, PE3.4</td>
</tr>
</tbody>
</table>

Teaching Strategies
There are two teaching activities in a typical week which we refer to as the Lecture and Problem Solving Class (PSC). Lectures will be delivered online using Microsoft Teams. The lectures in this course will cover core concepts and background theory in vibration analysis, measurement and machine condition monitoring. The lecture material will be available to students electronically before each class via Moodle.

The PSCs are designed to provide you with feedback and discussion on worked questions provided on the course Moodle page. Students are required to work through the exercises during the PSC and during their own personal study time.

Due to pandemic restrictions, face-to-face classes have been cancelled until further notice. As a result, all students are to attend PSCs in online mode. You will be notified if the situation changes.

The teaching activities in this course are organised on the following principles:

1. **Learning**: Student learning is the first priority - teaching and assessment are secondary concerns. Learning here is defined as gaining new ways of understanding the field of vibration analysis; not as simply memorising information. We are trying to transform you into engineers and critical thinkers in the discipline.

2. **Authenticity**: We will have as much authenticity of engineering practice as is possible within the constraints of the course and where it does not restrain your learning.

3. **High standards**: We will have high standards for achievement in the course, and everyone (including staff) will be accountable for putting in the effort to get you to the standard.

4. **Openness**: As much as possible, this course will be conducted in the open where all participants can be aware of it and can comment upon it.

5. **Process**: The focus of the course will be on processes, not outcomes. The right outcomes will be a by-product of following the correct processes.

**Additional Course Information**

The following assumed knowledge is expected for students undertaking this course: MATH2019 and MMAN2300.
### Assessment

<table>
<thead>
<tr>
<th>Assessment task</th>
<th>Weight</th>

<tbody>
<tr>
<td>1. Problem set 1: Fourier analysis and convolution</td>
<td>15%</td>
<td>Friday Week 3 5:00 PM</td>
<td>1, 2, 5</td>
</tr>
<tr>
<td>2. Problem set 2: Free and forced response of beams, Hamilton’s Principle, vibration measurements</td>
<td>15%</td>
<td>Monday Week 7 11:00 AM</td>
<td>1, 2, 5</td>
</tr>
<tr>
<td>3. Problem set 3: Measuring vibration and condition monitoring in rotordynamics</td>
<td>30%</td>
<td>Friday Week 10 5:00 PM</td>
<td>1, 2, 3, 4, 5</td>
</tr>
<tr>
<td>4. Final Examination</td>
<td>40%</td>
<td>Exam period, date TBC</td>
<td>1, 2, 3, 4</td>
</tr>
</tbody>
</table>

#### Assessment 1: Problem set 1: Fourier analysis and convolution

**Assessment length:** Approx. 10 pages plus full working  
**Due date:** Friday Week 3 5:00 PM  
**Deadline for absolute fail:** 5 working days after submission  
**Marks returned:** Two weeks after submission  

1 x individual assignment.  

This assignment is submitted through Turnitin and students do not see Turnitin similarity reports.

**Assessment criteria**

This assignment assesses course material weeks 1 - 2 inclusive. Individualized feedback on assignment submission.

**Additional details**

Submit your assignment using the template provided on the course Moodle page.

#### Assessment 2: Problem set 2: Free and forced response of beams, Hamilton’s Principle, vibration measurements

**Assessment length:** Approx. 10 pages plus full working  
**Due date:** Monday Week 7 11:00 AM  
**Deadline for absolute fail:** 5 working days after submission  
**Marks returned:** Two weeks after submission  

1 x individual assignment.  

This assignment is submitted through Turnitin and students do not see Turnitin similarity reports.
Assessment criteria

This assignment assesses course material up to week 5 inclusive. Individualized feedback on assignment submission.

Additional details

Submit your assignment using the template provided on the course Moodle page.

Assessment 3: Problem set 3: Measuring vibration and condition monitoring in rotordynamics

Assessment length: Approx. 20 pages
Due date: Friday Week 10 5:00 PM
Deadline for absolute fail: 5 working days after submission
Marks returned: Two weeks after submission

1 x individual assignment.

This assignment is submitted through Turnitin and students do not see Turnitin similarity reports.

Assessment criteria

This assignment assesses course material up to week 8 inclusive. Individualized feedback on assignment submission.

Additional details

Submit your assignment using the template provided on the course Moodle page.

Assessment 4: Final Examination

Due date: Exam period, date TBC
Marks returned: Upon release of final results

2 hour open book exam.

Assessment criteria

The final exam assesses all course material.
### Attendance Requirements

Students are strongly encouraged to attend all classes and review lecture recordings.

### Course Schedule

Resources

Prescribed Resources

The textbook for this course is:

  - Print: https://www.bookshop.unsw.edu.au/details.cgi?ITEMNO=9781292178608
  - Digital: https://unswbookshop.vitalsource.com/-v9781292178615

The relevant chapters are stated on the course Moodle page in each week folder and in the lecture notes.

The software used in this course is:

- MATLAB

UNSW has a MATLAB site license that allows currently enrolled UNSW students to download and install MATLAB on their own laptop or home PC. Further details of the license conditions and for download and installation instructions see the UNSW IT > IT For Students > Software > Matlab page.

Course materials (lecture notes and problem solving exercises) will be provided on the course Moodle page.

Recommended Resources

There are also several recommended books that are closely related to the course content. Many of these books are available through the library:

UNSW Library website: https://www.library.unsw.edu.au/

Course Evaluation and Development

Feedback on the course is gathered periodically using various means, including the UNSW myExperience process, informal discussion in the final class for the course, and the School’s Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

In this course, recent improvements resulting from student feedback include providing more worked examples with full MATLAB code in the PSCs and on the course Moodle page.
Submission of Assessment Tasks

Assessment submission and marking criteria

Should the course have any non-electronic assessment submission, these should have a standard School cover sheet.

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with due respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

Late policy

Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of 20 percent (20%) of the maximum mark possible for that assessment item, per calendar day, for a minimum of zero marks.

The late penalty is applied per calendar day (or part thereof), including weekends and public holidays, that the assessment is overdue.

Work submitted after the ‘deadline for absolute fail’ is not accepted and a mark of zero will be awarded for that assessment item. For example:

- Your course has an assessment task worth a total of 30 marks (Max Possible Mark)
- You submit the assessment 2 days after the due date
- The assessment is marked as usual and achieves a score of 20 marks (Awarded Mark)
- The late policy is applied using \[ \text{Late Mark} = \text{Awarded Mark} - (\text{Days} \times \text{Penalty per Day}) \times \text{Max Possible Mark} \]. Your adjusted final score is 8 marks \((20 - (2 \times 0.2) \times 30))\).

For some assessment items, a late penalty may not be appropriate. These are clearly indicated in the course outline, and such assessments receive a mark of zero if not completed by the specified date. Examples include:

1. Weekly online tests or laboratory work worth a small proportion of the subject mark, or
2. Online quizzes where answers are released to students on completion, or
3. Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date, or
4. Pass/Fail assessment tasks.

Examinations

You must be available for all quizzes, tests and examinations. For courses that have final examinations, these are held during the University examination periods: February for Summer Term, May for T1, August for T2, and November/December for T3.

Please visit myUNSW for Provisional Examination timetable publish dates. For further information on
Special Consideration

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.

UNSW now has a Fit to Sit / Submit rule, which means that if you attempt an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW's Special Consideration page.

Please note that students will not be required to provide any documentary evidence to support absences from any classes missed because of COVID-19 public health measures such as isolation. UNSW will not be insisting on medical certificates from anyone deemed to be a positive case, or when they have recovered. Such certificates are difficult to obtain and put an unnecessary strain on students and medical staff.

Applications for special consideration will be required for assessment and participation absences – but no documentary evidence for COVID-19 illness or isolation will be required.

Special Consideration Outcomes

Assessments have default Special Consideration outcomes. The default outcome for the assessment will be advised when you apply for Special Consideration. Below is the list of possible outcomes:
<table>
<thead>
<tr>
<th><strong>Outcome</strong></th>
<th><strong>Explanation</strong></th>
<th><strong>Example</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Time extension</td>
<td>Student provided more time to submit the assessment</td>
<td>e.g. 1 more week of time granted to submit a report</td>
</tr>
<tr>
<td>Supplementary</td>
<td>Student provided an alternate assessment at a later date/time</td>
<td>e.g. a supplementary exam is scheduled during the supplementary exam period of the term</td>
</tr>
<tr>
<td>assessment</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Substitute item</td>
<td>The mark for the missed assessment is substituted with the mark of another assessment</td>
<td>e.g. mark for Quiz 1 applied also applied as mark for Quiz 2, meaning if a student achieved a mark of 20/30 for Quiz 1 and was granted Special Consideration for Quiz 2, a mark of 20/30 would be applied for Quiz 2, etc</td>
</tr>
<tr>
<td>Exemption</td>
<td>All course marks are recalculated excluding this assessment and its weighting</td>
<td>e.g. The course has an assessment structure of:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Assignments 30%,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Lab report 30%,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Final Exam 40%.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If the Lab report is missed and student is granted Special Consideration, then the assessment structure may be reweighted as follows:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Assignments 50%</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Final Exam 50%</td>
</tr>
<tr>
<td></td>
<td></td>
<td>as though the Lab report did not exist</td>
</tr>
<tr>
<td>Non-standard</td>
<td>Course Coordinator is contacted for the outcome when special consideration is</td>
<td>e.g. typical for group assessments where time extension supplementary assessment could be granted to the group member, time extension could be granted to the whole group, etc. Clarify with your Course Convenor for</td>
</tr>
<tr>
<td></td>
<td>granted as the outcome differs on a case-by-case basis</td>
<td></td>
</tr>
</tbody>
</table>
Academic Honesty and Plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. **Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.**

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism, visit: [student.unsw.edu.au/plagiarism](http://student.unsw.edu.au/plagiarism). The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student’s work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here: [www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf](http://www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf)
Academic Information

Credit points

Course credit is calculated in Units-Of-Credit (UOC). The normal workload expectation for one UOC is approximately 25 hours per term. This includes class contact hours, private study, other learning activities, preparation and time spent on all assessable work.

Most coursework courses at UNSW are 6 UOC and involve an estimated 150 hours to complete, for both regular and intensive terms. Each course includes a prescribed number of hours per week (h/w) of scheduled face-to-face and/or online contact. Any additional time beyond the prescribed contact hours should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

On-campus class attendance

**T3-2021 UPDATE**

Classes will be entirely ONLINE until at least Week 6, after which we will receive further advice from UNSW about the return of face-to-face classes. Students who are enrolled in face-to-face classes will have access to the course’s online content but NO classes will be changed to reflect online delivery until Week 6 due to uncertainty regarding delivery mode for the rest of the term. Please go to your course’s Moodle modules and MS Teams sites for further information about accessing course resources and content.

- - - - - - - - - - - - - - - - - - - - - - - -

Public distancing conditions must be followed for all face-to-face classes. To ensure this, only students enrolled in those classes will be allowed in the room. No over-enrolment is allowed in face-to-face classes. Students enrolled in online classes can swap their enrolment from online to a limited number of on-campus classes by Sunday, Week 1. Please refer to your course’s Microsoft Teams and Moodle sites for more information about class attendance for in-person and online class sections/activities.

Your health and the health of those in your class is critically important. You must stay at home if you are sick or have been advised to self-isolate by NSW health or government authorities. Current alerts and a list of hotspots can be found here. You will not be penalised for missing a face-to-face activity due to illness or a requirement to self-isolate. We will work with you to ensure continuity of learning during your isolation and have plans in place for you to catch up on any content or learning activities you may miss. Where this might not be possible, an application for fee remission may be discussed. Further information is available on any course Moodle or Teams site.

In certain classroom and laboratory situations where physical distancing cannot be maintained or there is a high risk that it cannot be maintained, face masks will be considered mandatory PPE for students and staff.

For more information, please refer to the FAQs: https://www.covid-19.unsw.edu.au/safe-return-campus-faqs

Guidelines

All students are expected to read and be familiar with UNSW guidelines and polices. In particular,
students should be familiar with the following:

- Attendance
- UNSW Email Address
- Special Consideration
- Exams
- Approved Calculators
- Academic Honesty and Plagiarism
