2. Course information

Units of credit: 6

Prerequisite: PHAR2011. Highly recommended BIOC2201 or BIOC2101 or BIOC2181

2.1 Course summary

You will learn the molecular basis of drug action and explore how cutting-edge biotechnology and biomedical research advances pharmacological knowledge. Detailed coverage includes: genetic variability in drug action, protein structure-activity relationships, receptor-ligand interactions, signal transduction, biochemical and molecular aspects of drug targets and their signalling mechanisms. The course has a strong focus on developing research and analytical skills.

2.2 Course aims

Building on basic pharmacology skills learned in PHAR2011, the objectives of this course are to

- a. Explore the basis for drug actions at the molecular level from binding to a target to eliciting a cellular outcome
- b. To develop an understanding of why certain molecules might be agonists, antagonists or inverse agonists and the circumstances under which these definitions might change
- c. Develop an appreciation of how cellular context and genetic variability can impact the effect of a drug at the molecular level
- d. To develop skills in the interpretation and analysis of molecular pharmacology experiments and ability to decide whether the data supports the conclusions made by the scientist
2.3 Course learning outcomes (CLO)
At the successful completion of this course you (the student) should be able to:

1. Apply knowledge of molecular pharmacology of drug targets to pharmacological problems
2. Describe the effect of genetic variability on drug action
3. Apply knowledge of molecular biology techniques to the design of experiments to test molecular pharmacology hypotheses
4. Record, analyse and/or draw conclusions from experimental data

2.4 Relationship between course and program learning outcomes and assessments

3. Strategies and approaches to learning

3.1 Learning and teaching activities
The learning and teaching philosophy underpinning this course is centred on you gaining core skills and developing an understanding of the molecular basis of drug action. We aim to create an environment which interests and challenges you. The teaching is designed to be engaging and relevant in order to prepare you for future careers. The primary source of information for this course is the lecture material, with the collaborative learning sessions, practical classes and online material directly complementing and supporting the lecture material. Additionally, effective learning can also be enhanced through self-directed use of other resources such as textbooks, literature references and web-based sources.

Learning activities occur on the following days and times:
**Lectures:** Topics being covered each week can be found on the course timetable. The topics will be covered via pre-recorded lectures or online modules and will be available online prior to the week scheduled.

**Collaborative learning session:** You should attend one session per week, delivered face to face (or online for approved students) on Tuesday at either 4 – 5 pm or 5 - 6 pm

**Laboratory practicals:** You should attend the laboratory practicals to be held face to face (or online for approved students) on Thursdays 10 am – 1 pm. The practicals are a core part of your learning experience in the sciences.

**Q & A sessions:** Online on Friday 9 – 10 am.

**Mid-session exam:** Week 5 (covers content from weeks 1-4) and will be held during the Q & A time slot of week 5.

Information regarding weekly activities will be available via the interactive timetable on Moodle and in weekly announcements via Moodle.

### 3.2 Expectations of students

Students are reminded that UNSW recommends that a 6 units-of-credit course should involve about 150 hours of study and learning activities. The formal learning activities total approximately 60 hours throughout the term and students are expected (and strongly recommended) to do at least the same number of hours of additional study.

The Q&A sessions are provided to allow you the opportunity to clarify points covered in each week’s topics. You should review the weeks topics and make notes well in advance of the Q&A session. You should then review your notes and write down any questions you have about these topics and bring those questions along to the Q&A session.

The practicals are provided to support lecture material and practise analytical and critical evaluation skills.

In the collaborative learning sessions, you will work in teams to learn about techniques used in molecular pharmacology. You will then apply this knowledge in the critical analysis and interpretation of data presented in a journal article. These sessions will allow you to develop your research, information literacy, critical analysis, communication and time management skills.

The practical classes and collaborative learning sessions help you to achieve course learning outcomes 1-4. You need to complete any preparation work set prior to attending these classes. This might include pre-lab modules, reading of information sheets or answering of Journal Club questions. Attendance at practical classes and collaborative learning sessions will be recorded at the start of each class.

If you wish to contact the course convenors or staff, you can do so by e-mail or Microsoft Teams, using the details provided in section 1 of this document and on the course Moodle page. We are committed to providing the best experience and outcome for all students and will therefore endeavour to respond to e-mails as soon as possible, but please consider the following:

- Standard work hours are Monday to Friday from 8 am to 6 pm. E-mail correspondence received outside of this time may be dealt with from the next working day.
- All staff and students have busy schedules and multiple commitments, so while staff will endeavour to answer e-mail correspondence as quickly as possible, please apply appropriate expectations in this regard (i.e. within 48 hours and on a workday).
- Please only use Teams messaging to communicate with the course staff *during class*. Outside of class please use e-mail.
- All digital correspondence, including e-mail, Teams messages, and messages on discussion forums should be respectful, courteous, and polite.
To help us improve the course, please consider providing us with feedback by acting as a student liaison, and/or by completing the MyExperience survey later in the term.

### 4. Course schedule and structure

This course consists of 45 hours of class contact hours. You are expected to take an additional 100 hours of non-class contact hours to review online topics (lectures), complete assessments and class preparation activities, and study and revision in preparation for exams.

| Week 1 | Introduction to Molecular Pharmacology  
GPCRs:  
o Introduction to the Families  
o Activation Mechanism | CLS - Introduction  
Practical- Introduction  
Q&A | 1, 3, 4 |
| Week 2 | Advanced Pharmacodynamics  
o Measuring drug response  
o Binding kinetics | CLS - Molecular Techniques-BRET / CRISPR  
Practical- Determining Antagonist Potency  
Q&A | 1, 3, 4 |
| Week 3 | Second Messengers  
G proteins  
o Introduction to G proteins & G α subunits  
o G βγ subunits | CLS - Journal Club  
Practical- Receptor binding  
Q&A | 1, 3, 4 |
| Week 4 | Constitutively Active Receptors/ Inverse agonists  
Regulation of GPCR Signalling Internalisation & Endosomal Signalling | CLS - Molecular Techniques- Confocal / Western Blot  
Practical- Receptor Signalling  
Q&A | 1, 3, 4 |
| Week 5 | Receptor Theory:  
o Occupation and Operational Models  
o Ternary Complex Model and ETCM  
o Induced Fit vs Conformational Selection | CLS - Journal Club  
Practical- Receptor Signalling  
Q&A | 1, 3, 4 |
| Week 7 | Biased Signalling  
Allosteric Modulators | CLS -Molecular Techniques - α-screen / Radial plots  
Practical- Receptor Signalling  
Q&A | 1, 3, 4 |
| Week 8 | Orphan Receptors  
Ligand-Gated Ion Channel | CLS - Journal Club  
Practical- Receptor Signalling  
Q&A | 1, 3, 4 |
| Week 9 | Nuclear Receptors /Transcription Factors  
Pharmacogenetics/genomics | CLS - Molecular Techniques- EMSA / RGA  
Practical- Receptor Signalling  
Q&A | 1, 2, 3, 4 |
| Week 10 | Transporters  
Catalytic Receptors | CLS – Journal Club  
Practical- Pharmacogenetics  
Q&A | 1, 3, 4 |

Exam Period: 29 April – 12 May  
Supplementary Exam Period: 23 May – 27 May

**Assessment 1: Mid-term Progress Exam.** This exam will give you feedback on how you are succeeding in the course. It will test not only your knowledge of the molecular pharmacology of receptors, and molecular techniques used in pharmacology but also your ability to apply the knowledge you have acquired from multiple lectures, collaborative learning sessions and practicals to molecular pharmacology scenarios. The examinations may be in the format of MCQ, short and long answer questions. The questions will be based on the material covered in the lectures, practical classes and collaborative learning sessions. Material covered prior to the progress exam may again be examined in the final exam.

**Assessment 2: Laboratory Notebook.** Students will record the details of each experiment performed during the practical classes, collect and analyse data, and draw conclusions from the data generated.

**Assessment 3: Collaborative Learning Activities**

Part 1: Molecular Technique Quizzes: Students will take online quizzes covering the application of molecular techniques to pharmacological studies, and the interpretation and analysis of molecular pharmacology experiments (5 quizzes, 5%).

Part 2: Journal Club: ‘Journal Club’ will be scheduled every second week. You will answer questions that guide you through the process of analysing and drawing conclusions from data presented in a research article that has used the molecular techniques taught in the collaborative learning session the week before. You will submit answers to these questions prior to each ‘journal club’. At the end of term you will reflect on your critical analysis learning trajectory and nominate your “best” attempt at answering the questions for marking. (10%)

**Assessment 4: Final examination.** The end of session examination will test not only your knowledge of the molecular pharmacology of receptors, channels and transporters, and molecular techniques used in pharmacology, but also your ability to apply the knowledge you have acquired from multiple lectures,
collaborative learning sessions and practicals to molecular pharmacology scenarios. The examinations may be in the format of MCQ, short and long answer questions. The questions will be based on the material covered in the lectures, practical classes and collaborative learning sessions.

Further information
UNSW grading system: https://student.unsw.edu.au/grades
UNSW assessment policy: https://student.unsw.edu.au/assessment

5.2 Assessment criteria and standards
Practice exam questions will be made available to you via Moodle, as well as during the collaborative learning sessions.

Details regarding the assessment tasks will be provided to you during the first laboratory practical session and first collaborative learning session in week 1, as well as being available on the course Moodle page. A detailed marking rubric for each task will be provided to you via the course Moodle page.

5.3 Submission of assessment tasks
Late Submission
Late submissions will be penalized at 5% per day capped at five days (120 hours). Students will not be permitted to submit their assessments after this date.

Special Consideration
If you experience a short-term event beyond your control (exceptional circumstances) that impacts your performance in a particular assessment task, you can apply for Special Consideration.

You must apply for Special Consideration before the start of your exam or due date for your assessment, except where your circumstances of illness or misadventure stop you from doing so.

If your circumstances stop you from applying before your exam or assessment due date, you must apply within 3 working days of the assessment, or the period covered by your supporting documentation.

More information can be found on the Special Consideration website.

5.4. Feedback on assessment
Assessment 1: Mid-term test. Individual marks are provided via Moodle once the exams have been graded. Cohort feedback is provided in the form of a post or podcast via the course Moodle page in week 7.

Assessment 2: Laboratory Notebook. You will be receiving formative feedback during practical classes and 3 times during the term your laboratory notebook will be graded. After each submission you will receive summative written feedback. A marking rubric will be used to evaluate the laboratory notebooks and provide feedback.
Assessment 3: Collaborative Learning Activities

Part 1: Molecular Technique Quizzes: Feedback will be provided in class once the quiz is completed.

Part 2: Journal Club. You will receive feedback on how well you are analysing the journal article during class as part of the class discussion of the paper. A marking rubric will be used to evaluate your submission and written feedback on your reflection will be provided.

Assessment 4: Final examination. Cohort feedback is provided once the exams are completed in the form of a post in Moodle.

6. Academic integrity, referencing and plagiarism

Referencing is a way of acknowledging the sources of information that you use to research your assignments. You need to provide a reference whenever you draw on someone else’s words, ideas or research. Not referencing other people’s work can constitute plagiarism.

Please use Vancouver referencing style for this course.

Further information about referencing styles can be located at https://student.unsw.edu.au/referencing

Academic integrity is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage.1 At UNSW, this means that your work must be your own, and others’ ideas should be appropriately acknowledged. If you don’t follow these rules, plagiarism may be detected in your work.

Further information about academic integrity and plagiarism can be located at:

- The Current Students site https://student.unsw.edu.au/plagiarism, and
- The ELISE training site http://subjectguides.library.unsw.edu.au/elise/presenting

The Conduct and Integrity Unit provides further resources to assist you to understand your conduct obligations as a student: https://student.unsw.edu.au/conduct.

7. Readings and resources

Due to the cutting-edge nature of this course and the rapid advances made in the field of Molecular Pharmacology, a single primary text which adequately covers the content of this course has not been identified. Therefore, each lecturer will provide you with additional resources to supplement their lecture material. These resources will take the form of textbooks, journal articles or web-based resources. If available, links to the electronic form of these resources will be put on the course Moodle page.

Three textbooks have been identified that together cover the majority of the course content. These texts are available as online resources from the UNSW library

- “Molecular Pharmacology: From DNA to Drug Discovery” by Dickenson, Freeman, Lloyd Mills, Thode, & Sivasubramaniam.

“General and Molecular Pharmacology: Principles of Drug Action” Edited by Francesco Clementi and Guido Fumagalli, will be used as an additional reference text throughout the course.

8. Administrative matters
Student enquiries should be submitted via student portal https://portal.insight.unsw.edu.au/web-forms/
