2.1 Course summary

Fluid properties, Newtonian and non-Newtonian fluids; principles of fluid motion, mass and momentum balances; turbulent flow, dimensional analysis; mechanical energy balance, Bernoulli’s equation; conduction and Fourier’s law, steady-state and non-steady state conduction; forced and natural convection heat transfer; radiation, single body radiation, radiation exchange between objects.

2.2 Course aims

This course introduces the basic concepts in fluid flow and heat transfer and their applications in materials and mineral processing. The aims are to develop an understanding of basic principles governing fluid flow and heat transfer and to solve related problems in materials engineering.

2.3 Course learning outcomes (CLO)

At the successful completion of this course you (the student) should be able to:

1. Understand the principles and concepts in fluid flow and heat transfer
2. Follow proper procedures and apply fundamental equations to analyse fluid flow and heat transfer related problems
3. Develop analytical and problem-solving skills
4. Communicate effectively and be able to critically analyse information
2.4 Relationship between course and program learning outcomes and assessments

3. Strategies and approaches to learning

3.1 Learning and teaching activities
(Based on UNSW Learning Guidelines)

- **Students are actively engaged in the learning process.**
  It is expected that, in addition to attending classes, students will read, write, discuss, and engage in analysing the course content.

- **Effective learning is supported by a climate of inquiry where students feel appropriately challenged.**
  Students are expected to be challenged by the course content and to challenge their own preconceptions, knowledge, and understanding by questioning information, concepts, and approaches during class and study.

- **Learning is more effective when students’ prior experience and knowledge are recognised and built on.**
  Coursework, tutorials, assignments, laboratories, examinations, and other forms of learning and assessment are intended to provide students with the opportunity to cross-reference these activities in a meaningful way with their own experience and knowledge.

- **Students become more engaged in the learning process if they can see the relevance of their studies to professional and disciplinary contexts**
  The course content is designed to incorporate both theoretical and practical concepts, where the latter is intended to be applicable to real-world situations and contexts.

**Lectures:** The core concepts will be taught in lectures, students will have access to the lectures notes before class for annotation during the lecture. Students will be engaged in the learning process through class discussions and problem-solving questions independently and working together with partners and groups.

**Tutorials:** Tutorials will consolidate the students learning of the core concepts through short-answer and problem-solving questions. Real world examples of the concepts will engage the students in the learning processing by connecting theory to practice.
3.2 Expectations of students

- Students must attend classes with the expectation that students only miss classes due to illness or unforeseen circumstances
- Students must read through lecture notes and lab sheets prior to class
- During class, students are expected to engage actively in class discussions
- Students should work through lecture, tutorial and textbook questions
- Students should read through the relevant chapters of the prescribed textbook.
- Students should complete all assessment tasks and submit them on time.
- Students are expected to participate in online discussions through the Moodle page.

4. Course schedule and structure

This course consists of 54 hours of class contact hours. You are expected to take an additional 72 hours of non-class contact hours to complete assessments, readings and exam preparation spread over the term.

<table>
<thead>
<tr>
<th>Week</th>
<th>Topics</th>
<th>Activity</th>
</tr>
</thead>
</table>
| 1    | • Introduction  
• Fluids properties and static fluids  
• Fundamentals of fluid flow | Assignment 1 handed out |
| 2    | • Governing equations of fluid flows  
• Stress and velocity profiles in laminar flows | Online Tutorial/Practice |
| 3    | • Fundamentals of turbulent flows  
• Characterisation of different types of flows | Online Tutorial/Practice |
| 4    | • Mechanical energy balance of fluid flow  
• Applications of Bernoulli’s equation | Online Tutorial/Practice  
Assignment 1 due |
| 5    | • **Revision of fluid dynamics**  
• Introduction of the types of heat transfer  
• Governing equation for thermal conduction | Online Tutorial  
Mid-term exam |
| 6    | Flexibility week | |
| 7    | • 1D steady state conduction  
• 2D steady state conduction  
• Transient heat transfer | Assignment 2 handed out |
| 8    | • Heat transfer by convection  
• Characterisation of forced and natural convections | Online Tutorial/Practice |
| 9    | • Fundamentals of thermal radiation  
• Radiation from a surface | Online Tutorial/Practice |
| 10   | • Radiation between surfaces  
• **Revision of heat transfer** | Online Tutorial/Practice  
Assignment 2 due |
5. Assessment

5.1 Assessment tasks

<table>
<thead>
<tr>
<th>Assessment task</th>
<th>Description</th>
<th>Weight</th>
<th>Due Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>In-class practice</td>
<td>Open book, self-tests during the class time.</td>
<td>10%</td>
<td>End of the day</td>

<tr>
<td>Assignments</td>
<td>Two assignments will be handed out in weeks 1 and 7. Assignments will be graded and returned in two weeks</td>
<td>20%</td>
<td>Assignment 1: week 4 Assignment 2: week 10</td>
</tr>
<tr>
<td>Mid-term exam:</td>
<td>Open book exam will assess your knowledge on the fluid flow part.</td>
<td>35%</td>
<td>Week 5</td>
</tr>
<tr>
<td>Final exam:</td>
<td>Open book will assess your knowledge on the heat transfer part.</td>
<td>35%</td>
<td>Final exam period</td>
</tr>
</tbody>
</table>

Further information

UNSW grading system: [Guide to UNSW Grades](https://unsw.edu.au/students/assessments-exams/grading) | [UNSW Current Students](https://unsw.edu.au/current-students/grading)

UNSW assessment policy: [Assessment](https://unsw.edu.au/current-students/assessments) | [UNSW Current Students](https://unsw.edu.au/current-students/assessments)

5.2 Assessment criteria and standards

Assessment criteria and standards for each assessment tasks are available on the course Moodle page.

**NOTE:** Students who fail to achieve a **mark of >30% on each exam and >45% exam weighted average** (i.e., mid-session exam and final exam), but achieve a final mark >50% for the course, will be awarded a UF (Unsatisfactory Fail) for the course.

5.3 Submission of assessment tasks

- Students are expected to manage their time to meet deadlines and to request extensions as early as possible before the deadline.
- The in-class practice solutions should be uploaded to Moodle at the end of the day. **No late submission is allowed.**
- All assignments must contain a completed student declaration sheet and will be uploaded to Moodle by the due date. Students will lose **5% per day for late submission, capped at five days from the deadline, after which a student cannot submit the assignment.**
- Requests for special consideration must be submitted using the form available from the Student Desk in the Chanceller and must include medical certificates or other appropriate documents.
- UNSW operates under a Fit to Sit/ Submit rule for all assessments. If a student wishes to submit an application for special consideration for an exam or assessment, the application must be submitted prior to the start of the exam or before an assessment is submitted. If a student sits the exam/ submits an assignment, they are declaring themselves well enough to do so. Information on this process can be found here: [https://student.unsw.edu.au/special-consideration](https://student.unsw.edu.au/special-consideration). Medical certificates or other appropriate documents must be included. Students should also advise the lecturer of the situation.
5.4. Feedback on assessment

In-class practices: solutions will be provided in class. Answer sheets will be uploaded to Moodle.

Assignments: The assignments will be marked within two weeks after submission.

Mid-term exam: Students will receive their marks within two weeks of the exam.

Final exam: Students will receive their final grade when UNSW Sydney realises the marks via MyUNSW.

6. Academic integrity, referencing and plagiarism

Referencing is a way of acknowledging the sources of information that you use to research your assignments. You need to provide a reference whenever you draw on someone else’s words, ideas or research. Not referencing other people’s work can constitute plagiarism.

Further information about referencing styles can be located at Support for Referencing Assignments | UNSW Current Students

Academic integrity is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage. At UNSW, this means that your work must be your own, and others’ ideas should be appropriately acknowledged. If you don’t follow these rules, plagiarism may be detected in your work.

Further information about academic integrity and plagiarism can be located at:

- The Current Students site https://student.unsw.edu.au/plagiarism, and
- The ELISE training site About ELISE - ELISE | Informing your studies tutorial - Subject Guides at UNSW Library

The Conduct and Integrity Unit provides further resources to assist you to understand your conduct obligations as a student: https://student.unsw.edu.au/conduct.

7. Readings and resources

- Bird, Stewart and Lightfoot, Transport Phenomena, John Wiley & Sons Inc.
- Additional resource materials including recommended web sites will be provided during class lectures
