

Course Outline

MSCI2060

Coral Reefs in a Changing Climate

School of Biological, Earth and Environmental Science

Faculty of Science

Winter Term (T2C), 2020

1. Staff

Position	Name	Email	Consultation times and locations
Course Convenor	Alex Sen Gupta	a.sengupta@unsw.edu.au	On request, please email
Lecturer	Suhelen Egan	s.egan@unsw.edu.au	On request, please email
Lecturer	Adriana Verges	a.verges@unsw.edu.au	On request, please email
Lecturer	Iain Suthers	i.suthers@unsw.edu.au	On request, please email
Lecturer	Tracy Ainsworth	tracy.ainsworth@unsw.edu.au	On request, please email
Lecturer	Graeme Clark	g.clark@unsw.edu.au	On request, please email
Lecturer	Mariana Mayer Pinto	m.mayerpinto@unsw.edu.au	On request, please email
Lecturer	Laura Parker	l.parker@unsw.edu.au	On request, please email

2. Course information

Units of credit: 6

Pre-requisite(s): None

Teaching times and locations: This is an intensive course taught in the winter term (T2C).

This is an intensive winter term (T2C) 6 UoC course involving blended online and face-face delivery. The first part of the course will be a 5-day field trip on Lady Elliot Island in the Great Barrier Reef (ladyelliott.com.au), arriving 18th August and departing 28th August 2020 (equivalent to 5 weeks of normal trimester hours). This will be followed by 3 weeks of intensive-class delivered online (equivalent to 5 weeks contact hours). Additional costs associated with the field trip will be incurred including return airfare to Lady Elliott Island (LEI), accommodation and food.

<http://www.timetable.unsw.edu.au>

2.1 Course summary

Tropical coral reefs are some of the world's most diverse and important ecosystems. However coral reefs are also very sensitive to environmental change.

Over the last few years we have seen mass bleaching events and unprecedented levels of coral mortality around the world. Like many other ecosystems, coral reefs are under threat from a warming and acidifying ocean. To protect against future damage, we need to understand these threatened ecosystems, how they are affected by the physical and chemical environment, and how threats can be reduced by global and/or local action.

The course will cover multi-disciplinary subjects related to coral reef systems in a changing environment, including:

- The Coral Reef environment, formation, key physical and chemical processes
- Key ecosystem concepts (classification, ecosystem function, services, food webs, interactions) as they relate to coral reefs
- Corals and coral reef species
- Fundamentals of climate change
- Impacts of climate change and other threats on coral reefs
- Dealing with change: local and global solutions to mitigate, adapt to or manage climate change

2.2 Course aims

The course aims to introduce you to the fundamental concepts of ecology, oceanography, climate science and environmental management focussing on a socially, environmentally and economically important case study: coral reefs and how they are impacted by anthropogenic climate change. This will be achieved through direct observation, experimentation and guided learning at a Coral Reef site situated on the Southern Great Barrier Reef. After the field trip you will have the opportunity to revise what you have learnt and deepen your understanding of the coral reefs and their interactions with the environment and humans through a set of online modules and tutorials.

2.3 Course learning outcomes (CLO)

At the successful completion of this course you (the student) should be able to:

1. Explain physical and chemical processes that characterise coral reef environments
2. Identify key species on coral reefs, how they are categorised and their life cycles
3. Explain key ecological concepts as they apply to coral reefs including food webs, ecosystem function and services, habitat zones, types of species interactions
4. Explain how global and local as well as anthropogenic and natural factors affect coral species and their habitat
5. Explain the fundamentals of anthropogenic climate change, its observed and predicted impacts on the reef system
6. Identify and justify local and global strategies to mitigate or adapt to climate change and other threats
7. Apply the scientific method, including the development of a sampling strategy, data collection and data analysis to analyse the coral reef environment & ecosystems
8. Demonstrate skills in working as a group to achieve scientific understanding
9. Communicate scientific results in oral and written formats

3. Strategies and approaches to learning

3.1 Learning and teaching activities

The primary mode of learning on Lady Elliot Island will be by experiencing the coral reef environment in person through your own observations, guided reef walks, guided snorkel (this is not compulsory, but we can help students that haven't snorkelled before or who are not comfortable in the water), field experiment and by discussing with the team of coral, climate and ecosystem experts who will be on the island with you. In addition to the outdoor activities there will be lectures, tutorials and study sessions. We strongly encourage you to interact and ask questions of the academic staff who will be with you for the 5 days and are all active researchers interested in coral reefs.

Central to the field trip will be a field experiment. Here you will need to work as an effective group to collect, analyse and understand your data, and to communicate your findings to the rest of the group.

After returning to UNSW the remainder of the course learning will be taught as a series of online modules. There will be a number of recorded interviews with researchers answering questions about coral reef ecosystem and environment, threats and ways to manage those threats. This will be linked to further reading exercises, online tutorials/tasks and assessed online questions.

An additional component of the course is a media article that you will prepare. This not only helps you learn about effective science communication but will teach you the importance of assessing and providing feedback on other students work.

3.2 Expectations of students

The field trip component of this course is compulsory as is engagement with/attendance at all of the main activities: reef walk, field experiment, on-island lectures, off-island online modules.

We encourage you to work with your peers during on-island and off-island activities, however final assessed work must be your own.

IMPORTANT:

The field trip takes place at an island resort with other guests in attendance. You will be required to behave appropriately and follow the rules below. Unacceptable behaviour (as deemed by academic or island staff) will result in you being sent off the island (no refund will be provided). In addition, your home institution will be informed of the actions and underlying reasons.

- **Be respectful to other guests and island staff**
- **Be respectful of each other**
- **Be respectful of the academic staff**
- **No excessive alcohol use. As a paying island guest, you are welcome to use the resort bar and drink in moderation, but drunken behaviour will not be tolerated**
- **No alcohol to be brought on the island**
- **No entry of the water after consumption of alcohol**
- **Follow all the island rules (these will be explained at the island orientation)**

4. Course schedule and structure

Briefings and on-island timetable are subject to change depending on weather and/or other unforeseen circumstances.

Date	Activity [Learning opportunity]	Assessments
	Detailed information will be sent to you in good time prior to departure with information on travel information and what to bring.	
17th Aug	<ul style="list-style-type: none"> • Pre island briefing at UNSW/sign safety and terms statement • Lecture: Dangerous Animals!!! • Make your own way to Hervey Bay 	
18th Aug	<ul style="list-style-type: none"> • Make your own way to Hervey Bay • Flight from Hervey Bay to LEI • Island Briefing • Reef inhabitants and functions (Guided Reef Walk) • Evening: Meet the lecturers 	
19th Aug	<ul style="list-style-type: none"> • Lecture 1, 2 & 3 • Guided snorkel (optional activity) • Field project: project planning, experiment preparation and risk assessment Evening: Coral Reef Trivia 	Hand in Reef report (AT1)
20th Aug	<ul style="list-style-type: none"> • All day Field experiment 	
21st Aug	<ul style="list-style-type: none"> • Lecture 4, 5 & 6 • Group work (field project data analysis) • Free time 	
22nd Aug	<ul style="list-style-type: none"> • Lecture 7 & 8 • Group work • Sampling the coral (lagoon snorkel) • Evening: Group presentations 	Choose Media article topic (AT3a) Group presentation (AT2a)
23rd Aug	<ul style="list-style-type: none"> • 2hr project report writeup • Travel to Hervey Bay • Travel to Sydney 	Individual report writeup (AT2b)
Week 2	<ul style="list-style-type: none"> • Self-paced online modules 	Hand in Media article (AT3b) Complete online quizzes (AT4a)
Week 3	<ul style="list-style-type: none"> • Self-paced online modules 	Peer review of media article (AT3b) Complete online quizzes (AT4a)
4th Sept	<ul style="list-style-type: none"> • Complete online modules 	Complete final test (AT4b)

Other Activities

While on the island we will also provide guided snorkels to introduce you to the diverse array of species on the reef (snorkelling gear is included in the package, flotation devices will be available).

Divers may have the opportunity to go on a dive with the resort dive masters (additional cost)

The island runs glass bottom boat tours for those less comfortable with snorkelling or diving.

There will be a number of evening activities organised by the staff.

5. Assessments & Activities

There are 4 assessment tasks in this course that are designed to enable you to demonstrate that you have achieved the course learning outcomes. Completion and submission of all assessment tasks by 5pm on the due date are necessary to receive a final mark in the course. Late submissions without approved Special Considerations will be subject to a 10% per 24hr penalty of the assessment task weighting.

	ASSESSMENT TASKS (title/type and a brief description of the task)	DUE DATE	WEIGHTING	CLO(s)	FEEDBACK	
					TYPE	DATE
1	Reef Report: After the Coral Reef Lagoon walk, students are required to write an individual report identifying and describing a 3 reef species. (~700-word, plus any diagrams)	19th Aug	10%	1/2/3	Mark & brief comments	21 st Aug
2	Field Project: In a group of ~7 students supported by a staff member, students will develop a hypothesis about the reef environment or ecosystem, design a suitable experiment, conduct the experiment, collect and analyse the data, and draw conclusion on the hypothesis. Assessible work include: a) Group presentation (12 minutes, plus 5 minutes Q&A) b) Individual report (~1500 words, plus any diagrams)	22nd Aug 23 rd Aug	6% 20%	7/8/9	Mark & brief comments	28 th Aug
3	Science Media Output: a) Selection of topic: Students select a topic from a given list and discuss ideas with staff. b) Media Output: Post-island, students will research the topic and prepare a short news-style report in a media of their choice (short print or web article: max 1000 words + figures; video or audio podcast: max 6 minutes) c) Peer review: Each student will be randomly allocated 3 media outputs to review, mark the outputs and provide feedback for improvement. Peer review quality will be marked by the convenor.	22nd Aug 28 th Aug 3 rd Sept	0% 6% convenor mark 6% peer mark	4/9	Verbal, individual feedback brief staff & student comments & final mark	Instant 9 Sept
4	Online Tests: a) Formative quizzes: These quizzes are integrated in the online modules to assess foundational concepts. b) Final test: Summative test to assess contents learnt both on and off island	Self-paced in Wk 2 & 3 4 th Sept	35% 12%	1-6	Automatic feedback on incorrect answers Final mark	After students have submitted the quizzes 9 Sept

6. Academic integrity, referencing and plagiarism

Referencing is a way of acknowledging the sources of information that you use to research your assignments. You need to provide a reference whenever you draw on someone else's words, ideas or research. Not referencing other people's work can constitute plagiarism.

Further information about referencing styles can be located at <https://student.unsw.edu.au/referencing>

Academic integrity is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage.¹ At UNSW, this means that your work must be your own, and others' ideas should be appropriately acknowledged. If you don't follow these rules, plagiarism may be detected in your work.

Further information about academic integrity and **plagiarism** can be located at:

- The *Current Students* site <https://student.unsw.edu.au/plagiarism>, and
- The *ELISE* training site <http://subjectguides.library.unsw.edu.au/elise/presenting>

The *Conduct and Integrity Unit* provides further resources to assist you to understand your conduct obligations as a student: <https://student.unsw.edu.au/conduct>.
