1. Staff contact details

Contact details and consultation times for course convenor

Name: Dr. Fiacre Rougieux  
Office location: TETB 104  
Tel: (02) 9385 9834  
Email: fiacre.rougieux@unsw.edu.au  
Moodle: Fiacre Rougieux

Consultation Hours: After lectures and drop-in sessions.

Contact details and consultation times for additional lecturers/demonstrators/lab staff

Additional Lecturer:  
Name: Dr. Santosh Shrestha  
Email: s.shrestha@unsw.edu.au

Tutor/Demonstrator:  
Name: Lamees Yaqoob Mubarak Al Kiyumi  
Email: l.alkiyumi@unsw.edu.au

Please see the course Moodle.

- UNSW Handbook  
- Engineering Student Support Services Centre  
- UNSW Photovoltaic and Renewable Energy Engineering

3. Course details

Credit points

This is a 6 unit-of-credit (UoC) course and involves 5 hours per week (h/w) of face-to-face contact.

The normal workload expectations of a student are approximately 25 hours per term for each UOC, including class contact hours, other learning activities, preparation and time spent on all assessable work.
You should aim to spend about 10 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

Contact hours

<table>
<thead>
<tr>
<th>Day</th>
<th>Time</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lectures</td>
<td>Tuesday</td>
<td>3pm - 4pm</td>
</tr>
<tr>

</tr>
</tbody>
</table>

In Wk 5 and 7, tutorial classes will be held in Tyree Energy Technology LG09.

Please refer to your class timetable for the learning activities you are enrolled in and attend only those classes.

Summary and Aims of the course

Photovoltaic (PV) devices convert sunlight directly to electricity with low levels of greenhouse gas emissions per kWh of electricity produced. As such they have enormous potential to meet a large fraction of the demand for electricity. This course covers factors important to the design, construction and operation of solar cells and PV system design. Students will learn principle of operation of solar cells, loss mechanisms and design features to improve efficiency of solar cells and modules. In addition, students are introduced to applications and designs of PV systems.

More specifically the course aims to:
- Provide students with the fundamental information needed to understand PV system operation; and
- Develop students’ ability to undertake PV system designs.

Student learning outcomes

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

<table>
<thead>
<tr>
<th>Learning Outcome</th>
<th>EA Stage 1 Competencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Identify and describe the key properties of light-matter interaction that impact the performance of a photovoltaic device.</td>
<td>1.1, 1.3, 3.2</td>
</tr>
</tbody>
</table>
2. Calculate the incident solar power on a surface understanding the contributions of orientation, tilt, location, spectral change and weather factors.  
   1.1, 1.3, 1.5, 2.1, 2.2, 3.2

3. Use relevant standards and data sets for calculations of cell, module and system performance.  
   1.3, 1.5, 2.1, 3.2

4. Analyse and calculate power differences between photovoltaic cells, modules and arrays.  
   1.3, 2.1, 2.2, 3.2

5. Identify the appropriate system components and arrangements for different PV applications (e.g., grid-connect, stand-alone PV systems).  
   1.3, 1.5, 2.1, 2.3, 3.2

6. Design Stand Alone PV systems and analyse system economics.  
   1.3, 1.5, 2.1, 2.2, 2.3, 3.2, 3.6

4. Teaching strategies

The teaching strategy for this course comprises a series of lectures (3 hrs per week) and tutorial sessions (2 hrs per week). Lecture will introduce theory, worked examples and case studies. Tutorial problem sets will allow you to practice solving problems related to each topic and develop skills needed for the tests, lab assignments and the final exam. During some weeks, tutorials will be used to go through the problem sets for each topic (see the course schedule for details). In other weeks, lab exercises and associated assignments will allow you to develop skills related to the use of software for modeling solar cells, practical skills related to assembling and measuring the performance of photovoltaic systems and skills related to interpreting experimental results. These exercises will enhance your understanding of the operation of photovoltaic cells and systems. The course contains a significant component of self-learning through the experience gained by doing the solar cell/system simulation using LT Spice and design of PV systems.

Each tutorial activity will be posted on Moodle during the week preceding the activity. It will have a number of learning objectives and students will work through exercises that aim to address these outcomes. Some activities require that students complete calculations, others will involve the use of simulation software and one will involve laboratory measurements.

Students can also use their allocated tutorial session to ask tutors any questions they may have about the material taught in lectures. Students are also strongly encouraged to use the discussion group on Moodle to assist their learning. Tutors will monitor the discussions and help answer posted questions.

The course contains a large component of self-learning through the experience gained via using the LT Spice software to simulate various solar cell characteristics. The LT Spice software is installed on all the computers in the School’s computer lab and can be used for free from my access:  

https://www.myaccess.unsw.edu.au/

Assignments

The assessment scheme in this course reflects the intention to assess your learning progress through the term.

**Topic quizzes**
Regular online quizzes are designed to help with continues learning and learning enhancement.

**Lab reports**
In some weeks (see the schedule) you will work on different lab projects. The laboratory projects are designed to give you an opportunity to apply knowledge to practical problems relating to solar cells and systems. You will need to write a report for each lab answering specific questions. The reports must be submitted on-line via Moodle by the due date.

**Mid-term test**
Mid-term test is designed to test analytical and critical thinking and general understanding of the course material. The tests will be based on the lectures and tutorials from the previous topics, and any additional materials distributed to the class prior to the tests.

**PV design assignment**
The PV design assignment will give you opportunities to apply knowledge to address practical problems and present it to stakeholders. Your group presentation on the allocated PV design project will be assessed according to structure, content and presentation quality.

**Final Exam**
The exam in this course is a standard closed-book 2 hour written examination. University approved calculators are allowed. The examination tests analytical and critical thinking and general understanding of the course material in a controlled fashion. Questions may be drawn from any aspect of the course, unless specifically indicated otherwise by the lecturer. Marks will be assigned according to the correctness of the responses.

**Presentation**
All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with due respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

**Submission**
Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of 30%-mark reduction on the first day and an additional 10% per day thereafter, consistent with other SPREE courses.

The late penalty is applied per calendar day (including weekends and public holidays) that the assessment is overdue. There is no pro-rata of the late penalty for submissions made part way through a day.

Work submitted after the ‘deadline for absolute fail’ is not accepted and a mark of zero will be awarded for that assessment item.

For some assessment items, a late penalty may not be appropriate. These are clearly indicated in the course outline, and such assessments receive a mark of zero if not completed by the specified date. Examples include:

- Weekly online tests or laboratory work worth a small proportion of the subject mark,
- or
- Online quizzes where answers are released to students on completion, or
- Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date, or
- Pass/Fail assessment tasks.

**Marking**
Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

**Examinations**
The final exam for postgraduate students and undergraduate students will be the same. All material presented in the course is examinable in the final exam.

You must be available for all quizzes, tests and examinations.

Final examinations for each course are held during the University examination periods: February for Summer Term, May for T1, August for T2, and November/December for T3.

Please visit myUNSW for Provisional Examination timetable publish dates.

For further information on exams, please see the Exams webpage.

Calculators

You will need to provide your own calculator of a make and model approved by UNSW for the examinations. The list of approved calculators is available at student.unsw.edu.au/exam-approved-calculators-and-computers

It is your responsibility to ensure that your calculator is of an approved make and model, and to obtain an "Approved" sticker for it from the Engineering Student Supper Services Centre prior to the examination. Calculators not bearing an “Approved” sticker will not be allowed into the examination room.

Special consideration and supplementary assessment

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.

Please note that UNSW now has a Fit to Sit / Submit rule, which means that if you sit an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW's Special Consideration page.

7. Expected resources for students

Learning resources for this course include:

Reference Books

Software

On-line Resources
PV Education: PV Education is an online, interactive website by C.B. Honsberg and S. Bowden covering material similar to this textbook is also available at http://www.pveducation.org/pvcdrom/.
Moodle: As a part of the teaching component, Moodle will be used to disseminate teaching materials, host forums and occasionally quizzes. Announcements concerning course information will be given in the lectures and/or on Moodle. Assessment marks will also be made available via Moodle: https://moodle.telt.unsw.edu.au/login/index.php.

UNSW Library website: https://www.library.unsw.edu.au/

8. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the UNSW myExperience process, informal discussion in the final class for the course, and the School’s Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

In this course, recent improvements resulting from student feedback include …

Please provide examples of improvements of this course as a result of feedback.

9. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism, visit: student.unsw.edu.au/plagiarism. The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.
If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student's work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here: www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf

10. Administrative matters and links

All students are expected to read and be familiar with UNSW guidelines and polices. In particular, students should be familiar with the following:

- Attendance
- UNSW Email Address
- Special Consideration
- Exams
- Approved Calculators
- Academic Honesty and Plagiarism
- Equitable Learning Services
