COURSE STAFF

Course Convener/Lecturer: A/Professor Rukmi Dutta, Room EE406, rukmi.dutta@unsw.edu.au
Professor Andrea Morello, Room Newton 103D, a.morello@unsw.edu.au

Tutors: As above
Laboratory Contact: TBA

Consultations: You are encouraged to ask questions on the course material, after/during the lecture class times in the first instance, rather than via email. All the online class will be conducted via Microsoft Teams. The chat window and ‘raise-hand’ are great way to interact with the lecturer/tutor during the online class.

You are also encouraged to post your questions at any time using the Posts tab in the Channel (of the Microsoft Teams) relating to the topic you wish to ask a question on.

Question on the course content will not be answered by email. This is because, if a student has the need to ask a question or clarification, probably many other students feel the same need, and will benefit from seeing the answer. The open discussion on MS Teams, or questions asked directly during lectures and tutorials, are the only efficient way to achieve this.

Keeping Informed: Announcements may be made during classes, via email (to your student email address) and/or via online learning and teaching platforms.

In this course, we will use Microsoft Teams for all communications relating to the contents of the course. Please note that you will be deemed to have received this information, so you should take careful note of all announcements.

We will use Moodle (https://moodle.telt.unsw.edu.au/login/index.php) only to administer assessments (mid-term exam, quizzes, assignment, final exam).

COURSE SUMMARY

Contact Hours
The course consists of 4 hours of lectures, a 1-2 hours of tutorial per week and a 3-hour laboratory session in each fortnight.

Lectures (weeks 1-10) – 4 hr/wk, Tutorials – 1 hr/wk except for wk 5 and 11*. Laboratory classes – 3 hrs /fortnight. You should enrol in a tut and a lab-class and must attend the same class throughout T1, 2021.

| Tutorials (starts from wk 2) | Wednesday | 14:00 – 15:00 | Mat 103 TETB G16 |
|                            | 14:00 - 16:00* (wk 5 and 10) | Mat 103 |
|                            | Thursday  | 10:00 - 11:00 | Mat 103 |
|                            | 09:00 - 11:00* (wk 5 and 10) | Mat 103 |
| Labs                      | Thursday  | 16:00 - 17:00 | Online |
|                            | 06:00 - 18:00* (wk 5 and 10) | |

As per your timetable, wk 3 starts for odd week enrolments, wk 4 starts for even week enrolments.***

* 2hrs tutorial on week 5 and 10.
***For public holiday of Friday-week 7 the catch-up labs will be on Friday, week 10.
**Context and Aims**

Electromagnetism is of fundamental importance to electrical and computer engineers. Electromagnetic theory is indispensable in understanding electro-mechanical energy conversion, transmission & electric power utilisation systems and communication systems, RF/microwave devices, optical fibre systems, antennas, remote sensing, radio astronomy, and electromagnetic compatibility.

This course will consider electromagnetic theory as a general theory that includes the standard electro- and magneto-statics. The relationship between electric and magnetic fields, and their links expressed through the Maxwell equations, lead to wave propagation with associated wave behaviours. The course covers several aspects of electromagnetic applications such as capacitors, inductors, transformers, electromagnetic forces and power losses in electromagnetic systems (at low frequencies) and transmission lines, impedance matching circuits, waveguides, and antennas (at high frequencies).

This course aims to give students the necessary background for the design and analysis of both low-frequency electrical devices and high-frequency electronic components. Assumed knowledge of this course includes undergraduate physics (PHYS1231), vector calculus (MATH2069), and basic circuit theory techniques.

**Aims**

The goal of ELEC3115 is to introduce basic electromagnetism and establish the fundamentals of electromagnetic devices in engineering applications such as the energy systems, telecommunications, computing and other technologies.

Students will become familiar with electromagnetic applications such as capacitors, inductors, actuators, transformers, transmission lines, Smith charts, impedance matching circuits, waveguides and antennas, that are used in the designs and implementations of electrical power systems and modern wireless communications systems.

**Indicative Lecture Schedule**

Course has two components: Part A: Field electromagnetics, Part B: Wave electromagnetics

<table>
<thead>
<tr>

<th>Summary of Lecture Program</th>
</tr>
</thead>
</table>
| Week 1 | Part A commences, offered by A/Prof Rukmi Dutta  
Topic 1: Electrostatic field and capacitance |
| Week 2 | Tutorial classes start  
Topic 1: Electrostatic field and capacitance |
| Week 3 | Topic 2: Solving electrostatic problems |
| Week 4 | Topic 3: Magnetic field – static and time-varying and inductance |
| Week 5 | Topic 3: Magnetic field – static and time-varying and inductance |
| Week 6 | No lectures, tutorials and lab (Flexibility week) |
| Week 7 | Online open book mid-term test of part A on Monday, 29 March 2021 at 6:00 pm  
Part B commences, offered by Prof Andrea Morello  
Topic 4: Propagation and reflection of electromagnetic waves |
| Week 8 | Topic 4: Propagation and reflection of electromagnetic waves |
| Week 9 | Topic 5: Impedance matching |
| Week 10 | Topic 6: Waveguides  
Monday 19 April: Take-home assignment released |
| Week 11 | Wednesday 28 April: Take-home assignment submission deadline |
Indicative Laboratory Schedule
There are 3 labs to be completed during the session and students will do one every second week. Students choose a laboratory time when they enroll and will do experiments in pairs. The laboratory starts from week 3 for the students enrolled to odd weeks and from week 4 for the students enrolled to even weeks schedule.

Laboratory Practical Experiments  15%
Mid term test (Part A only) 15%
Take-home assignment (part B) 15%
Final Exam (2 hours) 55%

The assessments will be managed through the course Moodle page

COVID19 - Important Health Related Notice
Your health and the health of those in your class is critically important. You must stay at home if you are sick or have been advised to self-isolate by NSW health or government authorities. Current alerts and a list of hotspots can be found here. You will not be penalised for missing a face-to-face activity due to illness or a requirement to self-isolate. We will work with you to ensure continuity of learning during your isolation and have plans in place for you to catch up on any content or learning activities you may miss. Where this might not be possible, an application for fee remission may be discussed.

If you are required to self-isolate and/or need emotional or financial support, please contact the Nucleus: Student Hub. If you are unable to complete an assessment, or attend a class with an attendance or participation requirement, please let your teacher know and apply for special consideration through the Special Consideration portal. To advise the University of a positive COVID-19 test result or if you suspect you have COVID-19 and are being tested, please fill in this form.

UNSW requires all staff and students to follow NSW Health advice. Any failure to act in accordance with that advice may amount to a breach of the Student Code of Conduct. Please refer to the Safe Return to Campus guide for students for more information on safe practices.

COURSE DETAILS
Credits
This is a 6 UoC course and the expected workload is 15 hours per week throughout the 10-week term.

Relationship to Other Courses
This is a third-year course offered to students in a BE (Elect and Tele) program at UNSW. It gives the foundation for electrical power systems and all conventional electronic communications (RF, mobile, microwave and optical). The course provides the background for those who will design and build equipment and systems for application in electrical power or communication systems.
Pre-requisites and Assumed Knowledge
Students taking the course ELEC3115 will have successfully completed the Stage 1 courses PHYS1231 - Higher Physics 1B and the mathematics course MATH2069 Mathematics 2A (Vector Calculus) or their equivalent.

It is also assumed that students have good computer literacy and are able to use basic instruments such as an oscilloscope.

Following Courses
This course provides essential basic understanding which is pre-requisite for ELEC3105 - Electrical Energy Systems, which is a core course for subsequent specialisation in Power Engineering. It also provides essential background to ELEC4604 RF Electronics, TELE4652 Mobile and Satellite Communications, and PHTN4661 Optical Circuits & Fibres.

Learning outcomes
For this course, we have identified the following specific Learning Outcomes:
After successful completion of this course, you should be able to:

Part A
1. Use Gauss’, Ampere’s and Faraday’s Laws in the context of design and apply them in the evaluation of electrical devices such as power cables, actuators, transformers etc.
2. analyse characteristics of capacitor and inductor by evaluating the impact of dielectric and magnetic materials properties and calculate induced forces from their stored energies
3. solve simple boundary value problems, using the method of images, Poisson’s and Laplace’s equations

Part B
4. Identify the conditions that make the lumped-element models of electrical circuits break down at high frequency (HF), and replace them with distributed element models
5. Calculate the effect of reflections in transmission lines at HF, and apply analytical and graphical methods to design reflection-free transmission lines.
6. Describe and apply the fundamental properties of propagation modes in waveguides.

Additionally, students are expected to develop their communication skills by correctly using the appropriate terminology, and to demonstrate suitably professional skill and conduct in the context of an engineering laboratory.

This course is designed to provide the above learning outcomes which arise from targeted graduate capabilities listed in Appendix A. The targeted graduate capabilities broadly support the UNSW and Faculty of Engineering graduate capabilities (listed in Appendix B). This course also addresses the Engineers Australia (National Accreditation Body) Stage I competency standard as outlined in Appendix C.

Syllabus
A detailed syllabus for each part will be provided in the first class of each section.

TEACHING STRATEGIES
This course consists of lectures, laboratory work, homework and tutorial work.

Delivery Mode
Lectures
The lectures will provide the fundamental concepts and theory of engineering electromagnetics.

Laboratory work
The laboratory work provides students with opportunities to measure and characterise basic electromagnetic devices and applications. There are 3 labs to be completed during the session and students will do one lab every second week. Students choose a laboratory time when they enrol and will do experiments in pairs.
Students must comply with all H&S requirements and complete the relevant lab inductions before they may begin work. Each experiment has some required preparation, including a brief video introducing the equipment. All laboratory work must be recorded in a lab-book and not on loose sheets of paper. The lab work and the student’s performance will be assessed by the demonstrator, and a mark given at the end of each lab session. More details about the laboratory activities can be found in a separate document available on Moodle.

Laboratory Exemption
There is no laboratory exemption for this course. Regardless of whether equivalent labs have been completed in previous courses, all students enrolled in this course for T1, 2021 must take the labs. If, for medical reasons, (note that a valid medical certificate must be provided) you are unable to attend a lab, you will need to apply for a catch-up lab during another lab time, as agreed by the laboratory coordinator/course-in-charge.

Tutorial classes
Tutorial classes provide students with an opportunity to discuss problems with others, while being guided by a staff member. You should attempt all questions of the practice tutorial-sheets published in Moodle in advance of attending the tutorial classes. The importance of adequate preparation prior to each tutorial cannot be overemphasised, as the effectiveness and usefulness of the tutorial depends to a large extent on this preparation. Group learning is encouraged. Answers for some of these questions or additional questions provided during the tutorial class will be discussed during the tutorial session. Solutions discussed during the tutorial class may not be made available on the web, so it is worthwhile for you to attend your tutorial classes to gain maximum benefit.

Out of class work
Lectures can only ever introduce the key ideas. Students must further reflect on these to fully develop their understanding. Students are encouraged to read the textbook and reference materials. Preparation for laboratory exercises provides further understanding of the experiment. The practice tutorial questions develop an in-depth quantitative understanding of basics of electromagnetic engineering. These problems take the student through all critical course topics and aim to develop and exercise their thinking skills. Students are expected to attempt complete all the problems, though not expected necessarily to successfully complete the harder ones. Making serious attempts to understand and complete these problems is the proven method to succeed in ELEC3115.

On-line activities
All course documents, laboratory support material, etc., will be available on Moodle, as well as discussions and revision activities.

This year, due to COVID restrictions, the lectures will be run online during the scheduled time slots via Microsoft Teams. The tutorial and laboratory classes are face-face but with an option to enrol online. Those enrolled in the online laboratory classes will work in a group of 4 to 5, and have to appear in an oral exam after each lab class.

Learning in this course
You are expected to attend all lectures, tutorials, labs, and mid-term exams in order to maximise learning. You must prepare well for your laboratory classes and your lab work will be assessed. In addition to the lecture notes/video, you should read relevant sections of the recommended text. Reading additional texts will further enhance your learning experience. Group learning is also encouraged. UNSW assumes that self-directed study of this kind is undertaken in addition to attending face-to-face classes throughout the course.

ASSESSMENT
The assessment scheme in this course reflects the intention to align the learning outcomes to the assessment methods. Ongoing assessment occurs through the lab checkpoints (see lab manual). The assessments are specifically designed to stimulate and direct your learning progression towards the achievement of the stipulated learning outcomes of this course.
Laboratory Assessment: 15% worth
Laboratories are primarily about learning, and the laboratory assessment is designed mainly to check your knowledge as you progress through each stage of the laboratory tasks. You are required to maintain a lab book for recording your observations. A lab book is an A4 size notebook containing a mix of plain pages and graph sheets. You must purchase your own lab book from any store.
It is essential that you complete the laboratory preparation before coming to the lab. You are required to write the aim of the experiment and draw the diagram if required by the experiment in hand. This will be verified and signed by your demonstrators in the lab.
After completing each experiment, your work will be assessed by the laboratory demonstrator.
Assessment marks will be awarded according to your preparation (completing set preparation exercises and correctness of these or readiness for the lab in terms of pre-reading), how much of the lab you were able to complete, your understanding of the experiments conducted during the lab, and your understanding of the topic covered by the lab.

Mid-term test (Part A only): 15% worth
A open-book mid-term test will be held for part A of the course on Monday (29/03/2021), at 6:00 pm. Further details of the course materials for the test will also be announced closer to the date.

Assignment: 15% worth
The assignment allows self-directed study leading to the solution of partly structured problems. Marks will be assigned according to how completely and correctly the problems have been addressed and the understanding of the course material demonstrated by the report.
The assignment will be marked through a peer-review system managed by the Moodle platform. You will be required to scan your written assignment and upload it in pdf form to the Moodle system. After the submission deadline, the system will randomly and anonymously forward 3 assignments to each student. Each one of you will mark the 3 assignments according to the marking guidelines and the solution that will be posted on Moodle. For each assignment, 85% of your mark will be given for the assignment score itself, and 15% for the undertaking of the peer-marking activity. The marking activity is mandatory. Failure to mark the 3 assignments forwarded to you will result in a mark of 0 for the overall assignment.
Because of the peer-review method of marking, the solutions will be posted online immediately after the submission deadline. Therefore, there is no possibility for late submission. At exactly the time indicated on the assignment paper and in Moodle, the system will stop accepting assignment uploads. Students who have, for whatever reason (including internet problems, etc), failed to upload their assignment by the submission deadline, will receive zero marks for the assignment, and will not be included in the peer-review process. Therefore, students are encouraged to upload their paper well in advance of the deadline, in order to account for possible delays due to slow internet or other glitches.

Final Exam 55% worth
The exam in this course is a standard closed-book 2-hour written examination, comprising several questions. University approved calculators are allowed. The examination tests analytical and critical thinking and general understanding of the course material in a controlled fashion. Questions may be drawn from any aspect of the course (including laboratory), unless specifically indicated otherwise by the lecturers. Marks will be assigned according to the correctness of the responses.

Relationship of Assessment Methods to Learning Outcomes

<table>
<thead>
<tr>
<th>Part A</th>
<th>Learning outcomes</th>

<td>✓</td>
</tr>
</tbody>
</table>

Part B
Assessment of mid-semester tests and final exam will be carried out according marking criteria developed by the lecturers. Reassessment of these tasks will strictly follow UNSW reassessment policy (https://student.unsw.edu.au/results).

COURSE RESOURCES

The following textbook is prescribed for the course:

*Field and Wave Electromagnetics* - D. K. Cheng; 2nd edn, Addison Wesley; 1989

The following books are also good additional references:

3. *Introduction to Engineering Electromagnetics* - Yeon Ho Lee, Springer

Lecturers may mention other references in class for topics.

On-line resources

Moodle
As a part of the teaching component, Moodle will be used to disseminate teaching materials, host forums and quizzes. Assessment marks will also be made available via Moodle: https://moodle.telt.unsw.edu.au/login/index.php.

Mailing list
Announcements concerning course information will be given in the lectures and/or on Moodle and/or via email (which will be sent to your student email address).

Other Matters

Academic Honesty and Plagiarism
Plagiarism is the unacknowledged use of other people’s work, including the copying of assignment works and laboratory results from other students. Plagiarism is considered a form of academic misconduct, and the University has very strict rules that include some severe penalties. For UNSW policies, penalties and information to help you avoid plagiarism, see https://student.unsw.edu.au/plagiarism. To find out if you understand plagiarism correctly, try this short quiz: https://student.unsw.edu.au/plagiarism-quiz.

Student Responsibilities and Conduct
Students are expected to be familiar with and adhere to all UNSW policies (see https://student.unsw.edu.au/guide), and particular attention is drawn to the following:

Workload
It is expected that you will spend at least fifteen hours per week studying a 6 UoC course, from Week 1 until the final assessment, including both face-to-face classes and independent, self-directed study. In periods where you need to complete assignments or prepare for examinations, the workload may be greater. Over-commitment has been a common source of failure for many students. You should take the required workload into account when planning how to balance study with employment and other activities.
Attendance
Students are expected to follow and participate in all learning activities. Whenever possible, attend the online lecture in live mode, which gives the most opportunity for immediate engagement and asking questions. The lectures will be recorded and can later be accessed at any time.

General Conduct and Behaviour
Consideration and respect for the needs of your fellow students and teaching staff is an expectation. Conduct which unduly disrupts or interferes with a class is not acceptable and students may be asked to leave the class.

Work Health and Safety
UNSW policy requires each person to work safely and responsibly, in order to avoid personal injury and to protect the safety of others.

Special Consideration and Supplementary Examinations
You must submit all assignments and attend all examinations scheduled for your course. The assessment of applications for Special Consideration will be managed centrally and the University has introduced a “fit to sit/submit” rule. You will no longer be required to take your original documentation to The Nucleus for verification. Instead, UNSW will conduct source checks on documentation for verification purposes. You can apply for special consideration when illness or other circumstances beyond your control interfere with an assessment performance. If you need to submit an application for special consideration for an exam or assessment, you must submit the application prior to the start of the exam or before the assessment is submitted, except where illness or misadventure prevent you from doing so. If you sit an exam or submit an assignment, you are declaring yourself well enough to do so.
For more detail, consult: https://student.unsw.edu.au/special-consideration.

Continual Course Improvement
This course is under constant revision in order to improve the learning outcomes for all students. Please forward any feedback (positive or negative) on the course to the course convener or via the myExperience Process. You can also provide feedback to ELSOC who will raise your concerns at student focus group meetings. As a result of previous feedback obtained for this course and in our efforts to provide a rich and meaningful learning experience, we have continued to evaluate and modify our delivery and assessment methods.
The following changes are being undertaken to improve the course based on the previous students’ feedback on the course:

- A new method of assessing your lab work is being tried out, in order to give you all better feedback.
- Videos will be used to introduce the lab equipment to you. This was an explicit student suggestion.
- Part B, high-frequency wave propagation and component, will be restructured with an increased focus on basic concepts, examples and visualisation of problems.

Administrative Matters
On issues and procedures regarding such matters as special needs, equity and diversity, occupational health and safety, enrolment, rights, and general expectations of students, please refer to the School and UNSW policies: https://www.engineering.unsw.edu.au/electrical-engineering/resources/undergraduate-resources/policies-and-procedures
https://student.unsw.edu.au/guide
APPENDICES

Appendix A: Targeted Graduate Capabilities

Electrical Engineering and Telecommunications programs are designed to address the following targeted capabilities which were developed by the school in conjunction with the requirements of professional and industry bodies:

- The ability to apply knowledge of basic science and fundamental technologies;
- The skills to communicate effectively, not only with engineers but also with the wider community;
- The capability to undertake challenging analysis and design problems and find optimal solutions;
- Expertise in decomposing a problem into its constituent parts, and in defining the scope of each part;
- A working knowledge of how to locate required information and use information resources to their maximum advantage;
- Proficiency in developing and implementing project plans, investigating alternative solutions, and critically evaluating differing strategies;
- An understanding of the social, cultural and global responsibilities of the professional engineer;
- The ability to work effectively as an individual or in a team;
- An understanding of professional and ethical responsibilities;
- The ability to engage in lifelong independent and reflective learning.

Appendix B: UNSW Graduate Capabilities

The course delivery methods and course content directly or indirectly address a number of core UNSW graduate capabilities, as follows

- Developing scholars who have a deep understanding of their discipline, through lectures and solution of analytical problems in tutorials and assessed by assignments and written examinations.
- Developing rigorous analysis, critique, and reflection, and ability to apply knowledge and skills to solving problems. These will be achieved by the laboratory experiments and interactive checkpoint assessments during the labs.
- Developing capable independent and collaborative enquiry, through a series of tutorials spanning the duration of the course.
