COURSE STAFF

Course Convener: Prof Andrew Dempster, Room EE409, a.dempster@unsw.edu.au
Lecture/Laboratory Support: Dr. Joon Wayn Cheong, Room EE401.S04, cjwayne@unsw.edu.au

Consultations: You are encouraged to ask questions on the course material during the allocated lecture class times in the first instance, rather than via email. Lecturer consultation times will be advised during lectures. You are welcome to email staff, who can answer your questions on this course and can also provide you with consultation times. ALL email enquiries should be made from your student email address with ELEC9725 in the subject line, otherwise they will not be answered.

Staff absences during session: Prof Dempster is mostly on campus Tuesday and Thursday. At present there are no other absences envisaged.

Keeping Informed: Announcements may be made during classes, via email (to your student email address) and/or via online learning and teaching platforms – in this course, we will use Moodle https://moodle.telt.unsw.edu.au/login/index.php. Please note that you will be deemed to have received this information, so you should take careful note of all announcements.

COURSE SUMMARY

Contact Hours
The course has 3 hours timetabled per week. Lectures are pre-recorded and will be available ahead of the weeks identified below. The lecture slot will be used for lecture summaries and questions, quizzes, discussions of assignments, and demonstrations. These sessions will not be recorded.

Context and Aims
The course is an elective in EET and MECH programs:
8338 MEngSc Space Systems Engineering/ Electrical Engineering/ Telecommunications/ Systems and Control/ Robotics
The aim of the course is to provide an introduction to GPS and other satellite navigation systems, their signals and how they are processed to provide a position in a receiver. The course also provides details about GPS vulnerability and augmentation systems.

Assessment

Assessment for the course includes:

- Assignment 1 15% Due week 5
- Assignment 2 20% Due week 8
- Assignment 3 25% Due week 11
- In-class quizzes 10% Several weeks during session
- Final Quiz 30% exams

Laboratories:

Assignments 1 and 2 will be Matlab-based and will require writing of Matlab code. The self-directed laboratories in the early weeks are for those who have not used Matlab before. Assignment 3 will be a unique topic to research and will involve a presentation. The report for each assignment is required to have relevant theoretical background material, from lectures or textbooks, as well as reporting the actions taken and results produced.

COVID19 - Important Health Related Notice

Your health and the health of those in your class is critically important. You must stay at home if you are sick or have been advised to self-isolate by NSW health or government authorities. Current alerts and a list of hotspots can be found here. You will not be penalised for missing a face-to-face activity due to illness or a requirement to self-isolate. We will work with you to ensure continuity of learning during your isolation and have plans in place for you to catch up on any content or learning activities you may miss. Where this might not be possible, an application for fee remission may be discussed.

If you are required to self-isolate and/or need emotional or financial support, please contact the Nucleus: Student Hub. If you are unable to complete an assessment, or attend a class with an attendance or participation requirement, please let your teacher know and apply for special consideration through the Special Consideration portal. To advise the University of a positive COVID-19 test result or if you suspect you have COVID-19 and are being tested, please fill in this form.

UNSW requires all staff and students to follow NSW Health advice. Any failure to act in accordance with that advice may amount to a breach of the Student Code of Conduct. Please refer to the Safe Return to Campus guide for students for more information on safe practices.
COURSE DETAILS

Credits
This is a 6 UoC course and the expected workload is 15 hours per week throughout the 10 week trimester.

Relationship to Other Courses
This is a postgraduate course in the School of Electrical Engineering and Telecommunications, available to selected undergraduates. It is an elective in several MSc programs.

Pre-requisites and Assumed Knowledge
There are no formal pre-requisites for this course. Entry into the relevant MSc program is considered the qualification. It is essential that you are familiar with basic electronics and signal processing before this course is attempted.

Learning outcomes
By the end of this session you should be able to:

1. understand how satellite navigation systems work and how they interact with each other;
2. understand the workings of a satellite navigation receiver in terms of the signal design and why it has that design, and receiver subsystems and their functions in processing those signals;
3. select appropriate subsystems (e.g. antenna, RF front end) for a GPS receiver design;
4. make sound decisions about a GPS solution for integration within a larger system, based on your knowledge of how GPS components affect performance;
5. make an educated selection of GNSS receiver from those receiving GPS, Glonass, WAAS, Galileo, QZSS signals on the L1, L2, L5, E5 and E6 frequencies.

This course is designed to provide the above learning outcomes which arise from targeted graduate capabilities listed in Appendix A. The targeted graduate capabilities broadly support the UNSW and Faculty of Engineering graduate capabilities (listed in Appendix B). This course also addresses the Engineers Australia (National Accreditation Body) Stage I competency standard as outlined in Appendix C.

Syllabus
See Lecture Schedule

TEACHING STRATEGIES

Delivery Mode
The teaching in this course aims at establishing a good fundamental understanding of the areas covered using:

- Lectures (pre-recorded with live questioning) provide you with a focus on the core analytical material in the course, together with qualitative, alternative explanations to aid your understanding. These lectures are particularly interactive and all attendees will be required to participate;
- “Laboratories”, which are only for those who are unfamiliar with Matlab. They are hands-on and allow for exercises in problem solving and allow time for you to resolve problems in understanding of lecture material;
- Tutorials, which are specifically aimed to prepare students for the assessed assignments, and provide feedback on the assignments completed;
- Demonstrations to clarify with real examples how material covered in the lectures works in practice.

The lectures are stand-alone and cover one specific topic. The lectures are ordered such that there is a general introduction to satellite navigation, then the definition of the signals to be processed, then the processing of those signals in the order in which the receiver performs the processing. Matlab tutorials give the student sufficient background to complete the Matlab-based assignments. The assignments themselves are aimed to give students experience of the material covered in lectures, to allow “learning by doing”. Demonstrations of receivers and visualisation software bring the theoretical discussions to life. Regular quizzes ensure the student is up to date with the lecture material.
Learning in this course
You are expected to attend all lectures and tutorials in order to maximise learning. In addition to the lecture notes/video, you should read relevant sections of the recommended texts and related technical materials. Group learning is also encouraged. UNSW assumes that self-directed study of this kind is undertaken in addition to attending face-to-face classes throughout the course.

The core material for the course is the set of lecture notes. All that is required for the course is contained within them. The lectures have been derived from several sources, the most important of which is the Kaplan textbook. If the student was to buy one textbook, this one is recommended. As with almost any software-based learning experience, there is no substitute for writing and running code. The more familiar the student is with the Matlab exercises, the more likely that person is to understand and be able to use the theoretical ideas presented in lectures.

ASSESSMENT

The assessment scheme in this course reflects the intention to assess your learning progress through the trimester. Ongoing assessment occurs through the assignments and quizzes.

Quizzes
The quizzes in weeks 3, 5, 7 and 9 test your ongoing general understanding of the course material, and are designed to give you feedback on your progress. Questions may be drawn from any course material up to the time when the quiz is assigned, but in general will be only from material delivered since the previous quiz. It may contain questions requiring some (not extensive) knowledge of assignment material. Quizzes are all multiple choice.

Assignments
The assignments allow self-directed study leading to the solution of partly structured problems. For the first two assignments, marks are split equally between the Matlab program produced and its functionality, and the report describing the program. For the third assignment, marks are split equally between the presentation of the individual topic (peer assessed) and the report. Marks will be assigned according to how completely and correctly the problems have been addressed, the quality of the code written, and the understanding of the course material demonstrated by the report.

The assignment reports will be due at 1700 on the Fridays of weeks 5, 8 and 11. Late reports will attract a penalty of 10% per day (including weekends). Submission will be by email to the course coordinator.

Final Quiz
The final quiz is a closed-book 2 hour multiple choice examination, comprising forty questions. University approved calculators are allowed. The examination tests analytical and critical thinking and general understanding of the course material in a controlled fashion. Questions may be drawn from any aspect of the course, unless specifically indicated otherwise by the lecturer.

Special note about the marking of quizzes: Each quiz question has 5 possible answers. The student may give as many answers to each question as they think are possible, with one mark awarded for the correct answer and one quarter of a mark for incorrect answers. It is possible to attain negative marks.

COURSE RESOURCES

Textbooks

Prescribed textbook

Reference books

On-line resources

Moodle

As a part of the teaching component, Moodle will be used to disseminate teaching materials, host forums and provide news. Assessment marks will also be made available via Moodle: https://moodle.telt.unsw.edu.au/login/index.php.

Mailing list

Announcements concerning course information will be given in the lectures and/or on Moodle and/or via email (which will be sent to your student email address).

OTHER MATTERS

Dates to note

Important Dates available at: https://student.unsw.edu.au/dates

Academic Honesty and Plagiarism

Plagiarism is the unacknowledged use of other people’s work, including the copying of assignment works and laboratory results from other students. Plagiarism is considered a form of academic misconduct, and the University has very strict rules that include some severe penalties. For UNSW policies, penalties and information to help you avoid plagiarism, see http://www.lc.unsw.edu.au/plagiarism. To find out if you understand plagiarism correctly, try this short quiz: https://student.unsw.edu.au/plagiarism-quiz.

Student Responsibilities and Conduct

Students are expected to be familiar with and adhere to all UNSW policies (see https://my.unsw.edu.au/student/atoz/ABC.html), and particular attention is drawn to the following:

Workload

It is expected that you will spend at least fifteen hours per week studying a 6 UoC course, from Week 1 until the final assessment, including both face-to-face classes and independent, self-directed study. In periods where you need to complete assignments or prepare for examinations, the workload may be greater. Over-commitment has been a common source of failure for many students. You should take the required workload into account when planning how to balance study with employment and other activities.

Attendance

Regular and punctual attendance at all classes is expected. UNSW regulations state that if students attend less than 80% of scheduled classes they may be refused final assessment.
General Conduct and Behaviour
Consideration and respect for the needs of your fellow students and teaching staff is an expectation. Conduct which unduly disrupts or interferes with a class is not acceptable and students may be asked to leave the class.

Work Health and Safety
UNSW policy requires each person to work safely and responsibly, in order to avoid personal injury and to protect the safety of others.

Special Consideration and Supplementary Examinations
You must submit all assignments and attend all examinations scheduled for your course. You should seek assistance early if you suffer illness or misadventure which affects your course progress. All applications for special consideration must be lodged online through myUNSW within 3 working days of the assessment, not to course or school staff. For more detail, consult https://my.unsw.edu.au/student/atoz/SpecialConsideration.html.

Continual Course Improvement
This course is under constant revision in order to improve the learning outcomes for all students. Please forward any feedback (positive or negative) on the course to the course convener or via the myExperience process. You can also provide feedback to ELSOC who will raise your concerns at student focus group meetings. As a result of previous feedback obtained for this course and in our efforts to provide a rich and meaningful learning experience, we have continued to evaluate and modify our delivery and assessment methods. Specifically with respect to 2020 feedback, assignment 1 has been made a group activity to increase student interaction.

Administrative Matters
On issues and procedures regarding such matters as special needs, equity and diversity, occupational health and safety, enrolment, rights, and general expectations of students, please refer to the School and UNSW policies: http://www.engineering.unsw.edu.au/electrical-engineering/policies-and-procedures
https://my.unsw.edu.au/student/atoz/ABC.html
Appendix A: Targeted Graduate Capabilities

Electrical Engineering and Telecommunications programs are designed to address the following targeted capabilities which were developed by the school in conjunction with the requirements of professional and industry bodies:

- The ability to apply knowledge of basic science and fundamental technologies;
- The skills to communicate effectively, not only with engineers but also with the wider community;
- The capability to undertake challenging analysis and design problems and find optimal solutions;
- Expertise in decomposing a problem into its constituent parts, and in defining the scope of each part;
- A working knowledge of how to locate required information and use information resources to their maximum advantage;
- Proficiency in developing and implementing project plans, investigating alternative solutions, and critically evaluating differing strategies;
- An understanding of the social, cultural and global responsibilities of the professional engineer;
- The ability to work effectively as an individual or in a team;
- An understanding of professional and ethical responsibilities;
- The ability to engage in lifelong independent and reflective learning.

Appendix B: UNSW Graduate Capabilities

The course delivery methods and course content directly or indirectly address a number of core UNSW graduate capabilities, as follows:

- Developing scholars who have a deep understanding of their discipline, through lectures and solution of analytical problems in tutorials and assessed by assignments and written examinations.
- Developing rigorous analysis, critique, and reflection, and ability to apply knowledge and skills to solving problems. These will be achieved by the laboratory experiments and interactive checkpoint assessments and lab exams during the labs.
- Developing capable independent and collaborative enquiry, through a series of tutorials spanning the duration of the course.
- Developing digital and information literacy and lifelong learning skills through assignment work.
- Developing ethical practitioners who are collaborative and effective team workers, through group activities, seminars and tutorials.
- Developing independent, self-directed professionals who are enterprising, innovative, creative and responsive to change, through challenging design and project tasks.
- Developing citizens who can apply their discipline in other contexts, are culturally aware and environmentally responsible, through interdisciplinary tasks, seminars and group activities.
