1. Staff contact details

Contact details and consultation times for course convenor

Name: Prof Sami Kara

Office location: Room: 301A Ainsworth Building,

Tel: (02) 9385 5757

Email: S.Kara@unsw.edu.au

Moodle: <https://moodle.telt.unsw.edu.au/login/index.php>

Microsoft Teams Video Chat Hours: Tuesday 5:00pm-6:00pm

There will be Microsoft video chat hours scheduled every Wednesday from 5:00-6:00 pm prior to the online class. Moodle discussion should be used for all course related communication.

Contact details and consultation times for additional lecturers/demonstrators/lab staff

Name: Gwendolyn Foo

Office location: Room: 301 Ainsworth Building,

Tel: (02) 9385 6851

Email: gwendolyn.foo@unsw.edu.au

Please see the course [Moodle](#).

3. Course details

Credit points

This is a 6 unit-of-credit (UoC) course and involves 3 hours per week (h/w) of scheduled online contact.

The normal workload expectations of a student are approximately 25 hours per term for each

UOC, including class contact hours, other learning activities, preparation and time spent on all assessable work.

You should aim to spend about 9 h/w on this course. The additional time should be spent in making sure that you understand the lecture material, completing the set assignments, further reading, and revising for any examinations.

Contact hours

	Day	Time	Delivery Mode
Lectures	Tuesday	6:00pm – 8:00pm	Online by using Blackboard Ultra in Moodle and Moodle Recorded Lectures
Demonstrations	Tuesday	8:00pm – 9:00pm	Online by using Blackboard Ultra in Moodle and Moodle Recorded Lectures

All classes in T2 2020 will be online. Please consult this course’s Moodle module for details about delivery.

Summary and Aims of the course

Manufacturing has always been by far the largest contributor to waste generation in our society and therefore provides a huge potential for waste reduction. This is due to the fact that current manufacturing systems are considered to be of an open loop style, whereby manufacturers’ main interests are focused in the areas of design, development, sales and distribution. A shift to a closed loop manufacturing system is proposed to enable manufacturers to take into account the whole product life cycle and move away from open loop manufacturing. This will require engineering of the whole product life cycle of a product from raw material selection, production, usage to disposal in order to reduce the environmental impact of industrial society.

The aim of this course is to introduce the tools and techniques associated with engineering of a product life cycle to postgraduate students from technical backgrounds so that they can have an in-depth understanding of how to engineer the entire life of a product from material selection to disposal.

This course is designed to provide postgraduate students with high level knowledge of Life Cycle Engineering principles and practices. The course will follow a typical product life cycle and the associated tools and techniques available. It starts with defining the concept of life cycle engineering, history and potential benefits (ecological and environmental). It then introduces the drivers behind this concept such as legislation and standards, environmental requirements. Next, the concepts of life cycle thinking, Cradle-to-Grave, Cradle-to-Cradle, Energy and Eco-efficiency are introduced. In the following section, generic environmental

impact assessment tools and the concept of sustainable product development and the associated eco-design tools are introduced. The course continues with concepts related to usage and the end-of-life stages of product life cycle. These topics include product collection, reverse logistics and End-of-Life decision making, tools and technologies, disassemble sequence planning, disassembly technologies, reuse and remanufacturing principles, product monitoring and testing, and materials recycling techniques.

Student learning outcomes

This course is designed to address the learning outcomes below and the corresponding Engineers Australia Stage 1 Competency Standards for Professional Engineers as shown. The full list of Stage 1 Competency Standards may be found in Appendix A.

After successfully completing this course, you should be able to:

Learning Outcome		EA Stage 1 Competencies
1.	Have gained knowledge in the inter-disciplinary field of Life Cycle Engineering	PE1.3, PE1.5, PE1.6 2.
2.	Develop in-depth understanding of various tools and techniques associated with engineering and managing the whole life cycle of a product	PE2.2 3.
3.	Develop an appreciation of the future trends in the area of triple bottom line of sustainability (economic, ecological and social)	PE1.4
4.	Have gained knowledge in the inter-disciplinary field of Life Cycle Engineering	PE1.3, PE1.5, PE1.6 2.

4. Teaching strategies

This course is included to give you the skills to appreciate the engineering of product life cycles in order to reduce environmental impact and ultimately to achieve the three pillars of sustainability: namely economic, environmental and social sustainability. The content reflects my experience as a lecturer as well as my practical experience in the manufacturing environment, and practical examples drawn from that experience are used throughout the lectures and demonstrations. Effective learning is supported when you are actively engaged in the learning process and by a climate of enquiry, and these are both achieved in the lectures and demonstrations by way of practical case studies. You become more engaged in the learning process if you can see the relevance of your studies to professional, disciplinary and/or personal contexts, and the relevance is shown in all parts of the lectures and assignments by way of examples drawn from industry.

Dialogue is encouraged between you, others in the class and the lecturers. Diversity of experiences is acknowledged, as some students in each class have prior experience in a manufacturing environment. Your experiences are drawn on to illustrate various aspects, and this helps to increase motivation and engagement.

It is expected that assignments will be marked and handed back as soon as possible. You will have feedback and discussion while the assignment is fresh in your mind, to improve the learning experience.

The subject will be presented in the form of online lectures and demonstrations, where it is relevant. Each weekly class will consist of a 1-1.5 hrs. lecture followed by a demonstration example or case study related to the material covered in the lecture. A typical session would consist of a lecture covering the main elements of the topic for the week, interspersed with several individual or group exercises. The following table briefly summarizes the course requirements and the expectations from students in order to succeed in the course.

Lectures	<ul style="list-style-type: none"> • Find out what you must learn • Follow worked examples • Hear announcements on course changes • Participate in class discussions
Assessments	<ul style="list-style-type: none"> • Demonstrate your knowledge and skills • Demonstrate higher understanding and problem-solving
Private Study	<ul style="list-style-type: none"> • Review lecture material • Complete set problems and assignments • Reflect on class problems and assignments • Keep up with announcements and download materials from Moodle
Moodle Site	<ul style="list-style-type: none"> • Complete pre-lecture activities to be prepared for class • Participate in discussion groups • Access lecture notes and recordings

5. Course schedule

Week	Topic	Delivery Mode	Suggested Readings
1	Introduction, Sustainability and Drivers	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
2	Life Cycle Engineering (LCE) Framework and Mitigation Strategies	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
3	LCE Tools: Environmental Footprint of Products and Processes	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
4	LCE Tools: Life Cycle Costing, Material Flow Cost Accounting and Eco-Efficiency	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
5	Operational Mitigation Strategies: Energy and Resource Efficiency of Products and Processes	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle

Week	Topic	Delivery Mode	Suggested Readings
6	Operational Mitigation Strategies: Environmental Sustainability in Supply Chains	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
7	Design and Development Mitigation Strategies: Environmentally Sustainable Product Development	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
8	Use Stage Mitigation Strategies: Product Usage	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
9	End-of Life Mitigation Strategies: Reverse Logistics	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle
10	End-of Life Mitigation Strategies: EoL Product Hierarchy	Online by using Blackboard Ultra in Moodle	Lecture slides and readings on Moodle

6. Assessment

Assessment overview

Assessment	Group Project? (# Students per group)	Length	Weight	Learning outcomes assessed	Assessment criteria	Due date and submission requirements	Deadline for absolute fail	Marks returned
Assignment 1	No	1500 words	30%	1, 2, 3, and 4	Lecture materials weeks 1 and 2	Assignment will be released after the week 2 lecture and will be due midnight, Tuesday 23 rd June via Moodle	Midnight Sunday 28 th June	Two weeks after submission
Assignment 2	No	1500 words	30%	1, 2, 3, and 4	Lecture material from weeks 2, 3 and 4.	Assignment will be released after the week 4 lecture and will be due midnight, Tuesday 21st July via Moodle.	Midnight Sunday 26 th July	Two weeks after submission
Assignment 3	No	1500 words	40%	1, 2, 3, and 4	All course content from weeks 2-12 inclusive.	Assignment will be released after the week 8 lecture and will be due midnight, Tuesday 4 th August via Moodle	Midnight Sunday 9 th August	Two weeks after submission

Assignments

Further information about the assignments will be provided on Moodle.

Presentation

All submissions are expected to be neat and clearly set out. Your results are the pinnacle of all your hard work and should be treated with due respect. Presenting results clearly gives the marker the best chance of understanding your method; even if the numerical results are incorrect.

Submission

Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of 20 percent (20%) of the maximum mark possible for that assessment item, per calendar day.

The late penalty is applied per calendar day (including weekends and public holidays) that the assessment is overdue. There is no pro-rata of the late penalty for submissions made part way through a day.

Work submitted after the 'deadline for absolute fail' is not accepted and a mark of zero will be awarded for that assessment item.

For some assessment items, a late penalty may not be appropriate. These are clearly indicated in the course outline, and such assessments receive a mark of zero if not completed by the specified date. Examples include:

- a. Weekly online tests or laboratory work worth a small proportion of the subject mark,
or
- b. Online quizzes where answers are released to students on completion, or
- c. Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date, or
- d. Pass/Fail assessment tasks.

Marking

Marking guidelines for assignment submissions will be provided at the same time as assignment details to assist with meeting assessable requirements. Submissions will be marked according to the marking guidelines provided.

Special consideration and supplementary assessment

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to submitting an assessment or sitting an exam.

Please note that UNSW now has a [Fit to Sit / Submit rule](#), which means that if you attempt an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW's [Special Consideration page](#).

7. Expected resources for students

A list of reference books and reading materials will be provided during the course delivery, some of which can be found in the UNSW Library: <https://www.library.unsw.edu.au/>

Additional readings will be handed out during each class.

The course will be administered using Moodle. Therefore course administration and some lecture materials may be uploaded to Moodle. Students are advised to use Moodle for class communications.

UNSW Library website: <https://www.library.unsw.edu.au/>

Moodle: <https://moodle.telt.unsw.edu.au/login/index.php>

8. Course evaluation and development

Feedback on the course is gathered periodically using various means, including the UNSW myExperience process, informal discussion in the final class for the course, and the School's Student/Staff meetings. Your feedback is taken seriously, and continual improvements are made to the course based, in part, on such feedback.

In this course, recent improvements resulting from student feedback include revising the course to make it suitable for online delivery.

9. Academic honesty and plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. *Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.*

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism, visit: student.unsw.edu.au/plagiarism. The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

If plagiarism is found in your work when you are in first year, your lecturer will offer you assistance to improve your academic skills. They may ask you to look at some online resources, attend the Learning Centre, or sometimes resubmit your work with the problem fixed. However more serious instances in first year, such as stealing another student's work or paying someone to do your work, may be investigated under the Student Misconduct Procedures.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis) even suspension from the university. The Student Misconduct Procedures are available here:

www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf

10. Administrative matters and links

All students are expected to read and be familiar with UNSW guidelines and policies. In particular, students should be familiar with the following:

- [Attendance](#)
- [UNSW Email Address](#)
- [Special Consideration](#)
- [Exams](#)
- [Approved Calculators](#)
- [Academic Honesty and Plagiarism](#)
- [Equitable Learning Services](#)

Appendix A: Engineers Australia (EA) Competencies

Stage 1 Competencies for Professional Engineers

	Program Intended Learning Outcomes
PE1: Knowledge and Skill Base	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals
	PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing
	PE1.3 In-depth understanding of specialist bodies of knowledge
	PE1.4 Discernment of knowledge development and research directions
	PE1.5 Knowledge of engineering design practice
	PE1.6 Understanding of scope, principles, norms, accountabilities of sustainable engineering practice
PE2: Engineering Application Ability	PE2.1 Application of established engineering methods to complex problem solving
	PE2.2 Fluent application of engineering techniques, tools and resources
	PE2.3 Application of systematic engineering synthesis and design processes
	PE2.4 Application of systematic approaches to the conduct and management of engineering projects
PE3: Professional and Personal Attributes	PE3.1 Ethical conduct and professional accountability
	PE3.2 Effective oral and written communication (professional and lay domains)
	PE3.3 Creative, innovative and pro-active demeanour
	PE3.4 Professional use and management of information
	PE3.5 Orderly management of self, and professional conduct
	PE3.6 Effective team membership and team leadership
