The Science of Human Evolution: Understanding Humanity and Our Place in Nature

Associate Professor Darren Curnoe
School of Biological, Earth & Environmental Sciences
Faculty of Science
Q. Where do we fit into the natural world?
Q. Where do we fit into the natural world?
Q. Just what kind of an animal are we?
Q. Where do we fit into the natural world?
Q. Just what kind of an animal are we?
Q. What are our unique features – that set us apart from all other life – and how and why did they evolve?
Q. Where do we fit into the natural world?
Q. Just what kind of an animal are we?
Q. What are our unique features – that set us apart from all other life – and how and why did they evolve?
Q. When, where and how did our species – Homo sapiens – appear?
Q. Where do we fit into the natural world?

Q. When, where and how did our species – Homo sapiens – appear?
Q. When did living populations of people originate and how are we all related to each other?
Q. Are we still evolving?
As Thak worked frantically to start a fire, a Cro-Magnon man, walking erect, approached the table and simply gave Theena a light.
Q. What can we learn from the past to help inform the challenges we face today and into the future?
Q. What can we learn from the past to help inform the challenges we face today and into the future?

A. Heaps!
Words, Genes, and the Science of Past Human Deeds

New research reveals a clear link between the ancient spread of European languages and people, while other findings [...]
BUT DAD, NO ONE GOES ROUND HUNTING AND GATHERING ANYMORE. IT'S JUST SO... PALEOLITHIC!
Tapeworm head
Starch grains
Out of Africa
70,000 years ago, more rain started to fall on the arid desert of the Arabian peninsula. As vegetation grew along the coast, humans moved out of Africa.

Into Australasia
High sea levels made it hard to reach Australia. Two glacial periods, beginning 60,000 and 45,000 years ago, lowered the seas, making the island-hopping journey possible.

Into the Americas
Humans had reached Siberia by 30,000 years ago, but a massive ice sheet prevented them from entering North America. It shrank about 15,000 years ago, allowing them in.
